Re: Swan Island Lagoon Sediment Investigation
Work Order: 15468
SDG: 2006-00115_1

Dear Mr. Parker:

Cape Fear Analytical LLC (CFA) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on August 30, 2019 and September 04, 2019. This original data report has been prepared and reviewed in accordance with CFA's standard operating procedures.

Our policy is to provide high quality, personalized analytical services to enable you to meet your analytical needs on time every time. We trust that you will find everything in order and to your satisfaction. If you have any questions, please do not hesitate to call me at 910-795-0421.

Sincerely,

Cynde Larkins

To: Chris Cornwell <chr00735@cfanalytical.com>
CC: Janet Knox <janet@PGWG.COM>

Hi Chris,
Yes, please order 3 of the EDF-5183 (Cambridge SRM). I think the frequency of 1 per SDG (for 3 of the 4 SDGs Cynde is creating) makes sense.

Happy Holiday Weekend,
Jeff

Jeff,

Looks like we received about 75 samples. Everything looks OK receipt wise, Cynde is logging in now.

We have the Wellington SRM, not the Cambridge one. Want me to order the Cambridge? What frequency would you like for SRM's?

Having these logged in for method 1613, reporting J flags down to the EDL, EMPC's reported with a K flag.

Happy Friday!

HI Cynde,

Can you send me copies of the COCs or the login file when you get a chance. We taped the COCs in the cooler before making copies and I didn't get a count of the # analyzed. We may need to remove a couple if we're way over our scope.

Also, I need to communicate with Chris about ordering the EDF-5183 (Cambridge SRM) to run with this batch. So, please hold the samples until we get those ordered and added too.

Thanks!
Jeff

Certificate of Analysis

Clean Soil Reference Material

Catalog Number:	EDF-5183
Lot Number:	ER10091501
Expiration Date:	May 2023
Matrix:	Soil
Amount per Vial:	10 g
Storage and Handling:	Freezer.

Intended Use: For laboratory use only. This product is a sample of homogeneous soil matrix taken from an area where no known chemical contamination has occurred. This sample is intended for use in evaluating the performance of an analytical laboratory for the listed analytes.

Preparation: "Clean" soil was obtained from a location in Texas which was expected to contain minimal contamination. The soil was sieved to achieve uniform particle size and homogenized to within 5% using a disodium fluorescein indicator. Samples were then sterilized three times for two hours at 121°C and 15 psi.

Interlaboratory Analysis: This product was included in the Second Round of International Interlaboratory Study conducted by Cambridge Isotope Laboratories and Cerilliant Corporation. Participating laboratories used a variety of sample preparation and analytical techniques. The results listed below supersede those obtained in the First Round of Interlaboratory Study. This Second Round of Interlaboratory Study adds consensus values for one new dioxin, seventeen new PCBs, ten BDEs, and two new PAHs.

Interlaboratory Results: Results of the international interlaboratory study are attached. Consensus values were independently assigned by Manna Associates in the UK using the Cofino model of statistical analysis. These numbers are certified reference values. All values are presented at three significant figures. Analytes with fewer than five laboratories contributing acceptable data do not have assigned values reported in this study.

Cerilliant certifies that this standard meets or exceeds the specifications stated in this data sheet.

Decachlorobiphenyl (#209)	12.9	11.5	12.9 ± 23.0	7

Interlaboratory Results (continued):

Compound	Assigned [1] Value (ng/kg)	Standard Deviation	Reference [2] Value (ng/kg)	(n) [3]
Brominated diphenyl ethers [6]				
2,2',4-Tribromodiphenyl ether (#17)	4.80	3.05	4.80 ± 6.10	7
2,4,4'-Tribromodiphenyl ether (#28)	38.0	39.9	38.0 ± 79.8	11
2,2',4,4'-Tetrabromodiphenyl ether (#47)	192	123	192 ± 246	11
2,2',4,5'-Tetrabromodiphenyl ether (#49)	24.4	9.86	24.4 ± 19.7	5
2,3',4,4'-Tetrabromodiphenyl ether (#66)	12.6	5.46	12.6 ± 10.9	8
2,2',3,4,4'-Pentabromodiphenyl ether (#85)	19.5	8.97	19.5 ± 17.9	8
2,2',4,4',5-Pentabromodiphenyl ether (#99)	213	93.0	213 ± 186	11
2,2',4,4',6-Pentabromodiphenyl ether (#100)	55.4	15.5	55.4 ± 31.0	11
2,2',3,4,4',5-Hexabromodiphenyl ether (#138)	25.8	12.9	25.8 ± 25.8	9
2,2',4,4',5,5'-Hexabromodiphenyl ether (#153)	111	12.0	111 ± 24.0	11
2,2',4,4',5,6'-Hexabromodiphenyl ether (#154)	46.0	13.3	46.0 ± 26.6	11
2,2',3,4,4',5',6-Heptabromodiphenyl ether (#183)	286	35.4	286 ± 70.8	11
Decabromodiphenyl ether (#209)	1,930	1,150	1,930 ± 2,300	7
Polyaromatic hydrocarbons				
Anthracene	9,650	2,990	9,650 ± 5,980	6
Benz[*a*]anthracene	11,200	4,710	11,200 ± 9,420	7
Benzo[*b*]fluoranthene	18,100	9,580	18,100 ± 19,200	7
Benzo[*k*]fluoranthene	5,870	1,660	5,870 ± 3,320	7
Benzo[*g* ,*h* ,*i*]perylene	8,280	1,300	8,280 ± 2,600	7
Benzo[*a*]pyrene	7,620	3,080	7,620 ± 6,160	7
Chrysene	16,000	3,750	16,000 ± 7,500	7
Fluoranthene	33,000	5,170	33,000 ± 10,300	7
Indeno[1,2,3-*cd*]pyrene	9,550	2,070	9,550 ± 4,140	7
Phenanthrene	25,900	19,100	25,900 ± 38,200	6
Pyrene	26,300	4,340	26,300 ± 8,680	7

[1] Assigned Value as determined by Manna Associates in the UK using Cofino analysis of raw interlaboratory study data.

[2] Reference Value is the Assigned Value plus or minus two standard deviations. Negative numbers resulting from two standard deviations being greater than the assigned value have no significance.

[3] Number of laboratories providing results for this analyte.

[4] All numbers in parentheses refer to the IUPAC designation for the compound.

[5] Assigned values from the First Round of International Interlaboratory Study.

[6] All numbers in parentheses refer to the IUPAC designation for the related PCB congener.

COA Revision History

Revision No.	Date	Reason for Revision
00	December 02, 2015	Initial version

1. PRODUCT AND COMPANY IDENTIFICATION

1.1 Product identifiers

Product name : Clean Soil Reference Material 2003

Product Number : EDF-5183
Brand : Cerilliant

1.2 Relevant identified uses of the substance or mixture and uses advised against

Identified uses : Laboratory chemicals, Manufacture of substances

1.3 Details of the supplier of the safety data sheet

Company : Sigma-Aldrich
3050 Spruce Street
SAINT LOUIS MO 63103
USA

Telephone : +1 800-325-5832
Fax : +1 800-325-5052

1.4 Emergency telephone number

Emergency Phone # : (314) 776-6555

2. HAZARDS IDENTIFICATION

2.1 Classification of the substance or mixture

Not a hazardous substance or mixture.

2.2 GHS Label elements, including precautionary statements

Not a hazardous substance or mixture.

2.3 Hazards not otherwise classified (HNOC) or not covered by GHS - none

3. COMPOSITION/INFORMATION ON INGREDIENTS

3.1 Substances

No components need to be disclosed according to the applicable regulations.

4. FIRST AID MEASURES

4.1 Description of first aid measures

If inhaled
If breathed in, move person into fresh air. If not breathing, give artificial respiration.

In case of skin contact
Wash off with soap and plenty of water.

In case of eye contact
Flush eyes with water as a precaution.

If swallowed
Never give anything by mouth to an unconscious person. Rinse mouth with water.

4.2 Most important symptoms and effects, both acute and delayed

The most important known symptoms and effects are described in the labelling (see section 2.2) and/or in section 11

4.3 Indication of any immediate medical attention and special treatment needed
No data available

5. FIREFIGHTING MEASURES

5.1 Extinguishing media

Suitable extinguishing media
Use water spray, alcohol-resistant foam, dry chemical or carbon dioxide.

5.2 Special hazards arising from the substance or mixture
Nature of decomposition products not known.

5.3 Advice for firefighters
Wear self-contained breathing apparatus for firefighting if necessary.

5.4 Further information
No data available

6. ACCIDENTAL RELEASE MEASURES

6.1 Personal precautions, protective equipment and emergency procedures
Avoid dust formation. Avoid breathing vapours, mist or gas.
For personal protection see section 8.

6.2 Environmental precautions
No special environmental precautions required.

6.3 Methods and materials for containment and cleaning up
Sweep up and shovel. Keep in suitable, closed containers for disposal.

6.4 Reference to other sections
For disposal see section 13.

7. HANDLING AND STORAGE

7.1 Precautions for safe handling
Further processing of solid materials may result in the formation of combustible dusts. The potential for combustible dust formation should be taken into consideration before additional processing occurs.
Provide appropriate exhaust ventilation at places where dust is formed.
For precautions see section 2.2.

7.2 Conditions for safe storage, including any incompatibilities
Keep container tightly closed in a dry and well-ventilated place.
Storage class (TRGS 510): Non Combustible Solids

7.3 Specific end use(s)
Apart from the uses mentioned in section 1.2 no other specific uses are stipulated

8. EXPOSURE CONTROLS/PERSONAL PROTECTION

8.1 Control parameters

Components with workplace control parameters
Contains no substances with occupational exposure limit values.

8.2 Exposure controls

Appropriate engineering controls
General industrial hygiene practice.

Personal protective equipment

Eye/face protection
Use equipment for eye protection tested and approved under appropriate government standards such as NIOSH (US) or EN 166(EU).

Skin protection
Handle with gloves. Gloves must be inspected prior to use. Use proper glove removal technique (without touching glove's outer surface) to avoid skin contact with this product. Dispose of contaminated gloves after use in accordance with applicable laws and good laboratory practices. Wash and dry hands.

Body Protection
Choose body protection in relation to its type, to the concentration and amount of dangerous substances, and to the specific work-place., The type of protective equipment must be selected according to the concentration and amount of the dangerous substance at the specific workplace.

Respiratory protection
Respiratory protection is not required. Where protection from nuisance levels of dusts are desired, use type N95 (US) or type P1 (EN 143) dust masks. Use respirators and components tested and approved under appropriate government standards such as NIOSH (US) or CEN (EU).

Control of environmental exposure
No special environmental precautions required.

9. PHYSICAL AND CHEMICAL PROPERTIES

9.1 Information on basic physical and chemical properties

a)	Appearance	Form: solid
b)	Odour	No data available
c)	Odour Threshold	No data available
d)	pH	No data available
e)	Melting point/freezing point	No data available
f)	Initial boiling point and boiling range	No data available
g)	Flash point	No data available
h)	Evaporation rate	No data available
i)	Flammability (solid, gas)	No data available
j)	Upper/lower flammability or explosive limits	No data available
k)	Vapour pressure	No data available
l)	Vapour density	No data available
m)	Relative density	No data available
n)	Water solubility	No data available
o)	Partition coefficient: n-octanol/water	No data available
p)	Auto-ignition temperature	No data available
q)	Decomposition temperature	No data available
r)	Viscosity	No data available
s)	Explosive properties	No data available
t)	Oxidizing properties	No data available

9.2 Other safety information
No data available

10. STABILITY AND REACTIVITY

10.1 Reactivity
No data available

10.2 Chemical stability
Stable under recommended storage conditions.

10.3 Possibility of hazardous reactions
No data available

10.4 Conditions to avoid
No data available

10.5 Incompatible materials
Strong oxidizing agents

10.6 Hazardous decomposition products
Other decomposition products - No data available
In the event of fire: see section 5

11. TOXICOLOGICAL INFORMATION

11.1 Information on toxicological effects

Acute toxicity
No data available

Inhalation: No data available

Dermal: No data available

No data available

Skin corrosion/irritation
No data available

Serious eye damage/eye irritation
No data available

Respiratory or skin sensitisation
No data available

Germ cell mutagenicity
No data available

Carcinogenicity

IARC: No component of this product present at levels greater than or equal to 0.1% is identified as probable, possible or confirmed human carcinogen by IARC.

ACGIH: No component of this product present at levels greater than or equal to 0.1% is identified as a carcinogen or potential carcinogen by ACGIH.

NTP: No component of this product present at levels greater than or equal to 0.1% is identified as a known or anticipated carcinogen by NTP.

OSHA: No component of this product present at levels greater than or equal to 0.1% is identified as a carcinogen or potential carcinogen by OSHA.

Reproductive toxicity
No data available

No data available

Specific target organ toxicity - single exposure
No data available

Specific target organ toxicity - repeated exposure
No data available

Aspiration hazard
No data available

Additional Information
RTECS: Not available

To the best of our knowledge, the chemical, physical, and toxicological properties have not been thoroughly investigated.

12. ECOLOGICAL INFORMATION

12.1 Toxicity
No data available

12.2 Persistence and degradability
No data available

12.3 Bioaccumulative potential
No data available

12.4 Mobility in soil
No data available

12.5 Results of PBT and vPvB assessment
PBT/vPvB assessment not available as chemical safety assessment not required/not conducted

12.6 Other adverse effects

No data available

13. DISPOSAL CONSIDERATIONS

13.1 Waste treatment methods

Product
Offer surplus and non-recyclable solutions to a licensed disposal company.

Contaminated packaging
Dispose of as unused product.

14. TRANSPORT INFORMATION

DOT (US)

IMDG

IATA

15. REGULATORY INFORMATION

SARA 302 Components
No chemicals in this material are subject to the reporting requirements of SARA Title III, Section 302.

SARA 313 Components
This material does not contain any chemical components with known CAS numbers that exceed the threshold (De Minimis) reporting levels established by SARA Title III, Section 313.

SARA 311/312 Hazards
No SARA Hazards

Massachusetts Right To Know Components
No components are subject to the Massachusetts Right to Know Act.

Pennsylvania Right To Know Components

	CAS-No.	Revision Date
Soil	-	

New Jersey Right To Know Components

	CAS-No.	Revision Date

Soil

California Prop. 65 Components
This product does not contain any chemicals known to State of California to cause cancer, birth defects, or any other reproductive harm.

16. OTHER INFORMATION

HMIS Rating

Health hazard:	0
Chronic Health Hazard:	
Flammability:	0
Physical Hazard	0

NFPA Rating

Health hazard:	0
Fire Hazard:	0
Reactivity Hazard:	0

High Resolution Dioxins and Furans Analysis

Case Narrative

HDOX Case Narrative
Pacific Groundwater Group (PGWG)
SDG 2006-00115_1
Work Order 15468

Method/Analysis Information

Product: **Dioxins/Furans by EPA Method 1613B in Solids**
Analytical Method: EPA Method 1613B
Extraction Method: SW846 3540C
Analytical Batch Number: 41713
Clean Up Batch Number: 41712
Extraction Batch Number: 41711

Sample Analysis

Samples were received at 5.2°C (15468001, 15468002, 15468003, 15468004, 15468005, 15468006, 15468007, 15468008, 15468009, 15468010, 15468011, 15468012, 15468014, 15468015) , 3.8°C (15468013) and ambient (15468016). The following samples were analyzed using the analytical protocol as established in Method 1613B:

Sample ID	Client ID
12024755	Method Blank (MB)
12024756	Laboratory Control Sample (LCS)
12024757	Laboratory Control Sample Duplicate (LCSD)
12024758	15468001(R4-SC1b-20to30-82819) Matrix Spike (MS)
12024759	15468001(R4-SC1b-20to30-82819) Matrix Spike Duplicate (MSD)
15468001	R4-SC1b-20to30-82819
15468002	R4-SC1b-30to40-82819
15468003	R4-SC1b-40to50-82819
15468004	R4-SC1b-50to60-82819
15468005	R4-SC1b-60to70-82819
15468006	R4-SC1b-70to80-82819
15468007	R4-SC1b-80to90-82819
15468008	R4-SC1b-90to100-82819
15468010	R4-SC1b-100to110-82819
15468011	R4-SC1b-110to120-82819
15468012	R4-SC1b-120to130-82819
15468013	413-SC1b-40to50-82819
15468014	R4-SC1b-130to140-82819
15468015	R4-SC1b-140to150-82819
15468016	SRM Lot# ER10091501

Samples 15468 001, 002, 003, 004, 005, 006, 007, 008, 009, 010, 011, 012, 013, 014 and 015 in this SDG were analyzed on a "dry weight" basis. Sample 15468 016 in this SDG was analyzed on an "as received" basis.

SOP Reference
Procedure for preparation, analysis and reporting of analytical data are controlled by Cape Fear Analytical LLC (CFA) as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with CF-OA-E-002 REV# 15.

Raw data reports are processed and reviewed by the analyst using the TargetLynx software package.

Calibration Information

Initial Calibration
All initial calibration requirements have been met for this sample delivery group (SDG).

Continuing Calibration Verification (CCV) Requirements
All associated calibration verification standard(s) (CCV) met the acceptance criteria.

Quality Control (QC) Information

Certification Statement
The test results presented in this document are certified to meet all requirements of the 2009 TNI Standard.

Method Blank (MB) Statement
The MB(s) analyzed with this SDG met the acceptance criteria.

Surrogate Recoveries
All surrogate recoveries were within the established acceptance criteria for this SDG.

Laboratory Control Sample (LCS) Recovery
The LCS spike recoveries met the acceptance limits.

Laboratory Control Sample Duplicate (LCSD) Recovery
The LCSD spike recoveries met the acceptance limits.

LCS/LCSD Relative Percent Difference (RPD) Statement
The RPD(s) between the LCS and LCSD met the acceptance limits.

QC Sample Designation
Sample 15468001 (R4-SC1b-20to30-82819)- Batch 41713 was selected for analysis as the matrix spike and matrix spike duplicate.

Matrix Spike/Duplicate (MS/MSD) Recovery Statement

The MS recoveries for this SDG were not within the acceptance limits. The failures confirm in the matrix spike duplicate and are attributed to matrix interference. 12024758 (R4-SC1b-20to30-82819) and 12024759 (R4-SC1b-20to30-82819)- Batch 41713.

MS/MSD Relative Percent Difference (RPD) Statement
The relative percent differences (RPD) between each MS and MSD were not within the required acceptance limits. Sample data is validated based on acceptable LCS/LCSD results. 12024759 (R4-SC1b-20to30-82819)- Batch 41713.

Technical Information

Holding Time Specifications
CFA assigns holding times based on the associated methodology, which assigns the date and time from sample collection. Those holding times expressed in hours are calculated in the AlphaLIMS system. Those holding times expressed as days expire at midnight on the day of expiration. All samples in this SDG met the specified holding time.

Preparation/Analytical Method Verification
All procedures were performed as stated in the SOP.

Sample Dilutions
The samples in this SDG did not require dilutions.

Sample Re-extraction/Re-analysis
Re-extractions or re-analyses were not required in this SDG.

Miscellaneous Information

Nonconformance (NCR) Documentation
The following NCR was generated for this SDG: 647532 12024759 (R4-SC1b-20to30-82819)- Batch 41713.

Manual Integrations
Certain standards and QC samples required manual integrations to correctly position the baseline as set in the calibration standard injections. Where manual integrations were performed, copies of all manual integration peak profiles are included in the raw data section of this fraction. Manual integrations were required for data files in this SDG.

Sample preparation
No difficulties were encountered during sample preparation.

Electronic Packaging Comment

This data package was generated using an electronic data processing program referred to as virtual packaging. In an effort to increase quality and efficiency, the laboratory has developed systems to generate all data packages electronically. The following change from traditional

packages should be noted: Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. An electronic signature page inserted after the case narrative will include the data validator's signature and title. The signature page also includes the data qualifiers used in the fractional package. Data that are not generated electronically, such as hand written pages, will be scanned and inserted into the electronic package.

Sample Data Summary

Cape Fear Analytical, LLC

3306 Kitty Hawk Road Suite 120, Wilmington, NC 28405 - (910) 795-0421 - www.capefearanalytical.com

Qualifier Definition Report
for

PGWG001 Pacific Groundwater Group

Client SDG: 2006-00115_1 CFA Work Order: 15468

The Qualifiers in this report are defined as follows:

* A quality control analyte recovery is outside of specified acceptance criteria

** Analyte is a surrogate compound

B The target analyte was detected in the associated blank.

E Value is estimated - Concentration of the target analyte exceeds the instrument calibration range

J Value is estimated

K Estimated Maximum Possible Concentration

Q Quantitative Interference; value is estimated

U Analyte was analyzed for, but not detected above the specified detection limit.

DL Indicates that sample is diluted.
RA Indicates that sample is re-analyzed without re-extraction.
RE Indicates that sample is re-extracted.

Review/Validation

Cape Fear Analytical requires all analytical data to be verified by a qualified data reviewer.

The following data validator verified the information presented in this case narrative:

Signature: [redacted] **Name: Heather Patterson**

Date: 23 SEP 2019 **Title: Group Leader**

Re: Swan Island Lagoon Sediment Investigation
Work Order: 15469
SDG: 2006-00115_2

Dear Mr. Parker:

Cape Fear Analytical LLC (CFA) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on August 30, 2019. This original data report has been prepared and reviewed in accordance with CFA's standard operating procedures.

Our policy is to provide high quality, personalized analytical services to enable you to meet your analytical needs on time every time. We trust that you will find everything in order and to your satisfaction. If you have any questions, please do not hesitate to call me at 910-795-0421.

Sincerely,

Cynde Larkins

Hi Cynde,
Good catch.
Re: H3-SC1b-30to40-82919 ("29" is the correct ID), so the COC date of "28" is wrong and should be "29"

Thanks,
Jeff

Jeff,

I have found one more discrepancy for you to look at. The ID and date on the label for this sample was marked through/corrected to -82919 and 8/29/19, but the COC has 8/28/19 as the collection date and it is difficult to discern the date in the ID: H3-SC1b-30to40-82919 (or -82819).

Thank you,
Cynde

Subject: Re: Swan Island sample receipt 30AUG19

Thank you!

By the way - that "00to20" was my mistake. The COC and the label have "00to10". My apologies!

On 8/30/2019 2:36 PM, Jeff S. Parker wrote:

> HI Cynde,

> 2. We misplaced those in a cooler to another lab and will get those

to you asap.

3. The ID on the COC are correct (highlighted are correct) for those samples with one exception where both are incorrect. The first L3 sample should be "00to10" instead of "00to20":

ID on COC	
J6-SC1b-00to10-82719	J(
J6-SC1b-10to20-082719	J(
L3-SC1b-00to20-82619	L:
L3-SC1b-10to20-82619	L:
D6-SC1b-10to20-82619	D

Thanks,
Jeff

Subject: Swan Island sample receipt 30AUG19

Good afternoon,

CFA received your samples today for the Swan Island Lagoon project in good condition and within temperature. There are several discrepancies listed below that I need to your help to resolve.

1. Sample D6-SC1b-10to20-82619, collected 8/26/19 at 12:10, is marked on the COC for both 1613B analysis and Archive. The sample listed beneath this one, 411-SC1b-50to60-82619, collected 8/26/19 at 15:00 is not marked for either 1613B or Archive. It looks like one of the X's is on the wrong line perhaps? Please advise.

2. There were no bottles received for sample 712-82819. Two containers were received for 711-82719.

3. There are sample ID discrepancies between the COC and the labels

for the samples listed in the table below (collection dates and times match). Please verify which ID should be used for log in.

ID on COC	ID on label
J6-SC1b-00to10-82719	J6-SC1-00to10-82719
J6-SC1b-10to20-082719	J6-SC1-10to20-82719
L3-SC1b-00to20-82619	L3-SC2-00to20-82619
L3-SC1b-10to20-82619	L3-SC2-10to20-82619
D6-SC1b-10to20-82619	D6-SC2-10to20-82619

Thank you!

High Resolution Dioxins and Furans Analysis

Case Narrative

HDOX Case Narrative
Pacific Groundwater Group (PGWG)
SDG 2006-00115_2
Work Order 15469

Method/Analysis Information

Product: **Dioxins/Furans by EPA Method 1613B in Solids**
Analytical Method: EPA Method 1613B
Extraction Method: SW846 3540C
Analytical Batch Number: 41747
Clean Up Batch Number: 41746
Extraction Batch Number: 41745

Sample Analysis

Samples were received at 3.8°C (15469001, 15469002, 15469003, 15469004, 15469005) , 3.3°C (15469006, 15469007, 15469008, 15469009, 15469010, 15469011, 15469012) and 5.2°C (15469013, 15469014, 15469015, 15469016, 15469017, 15469018, 15469019, 15469020, 15469021, 15469022, 15469023). The following samples were analyzed using the analytical protocol as established in Method 1613B:

Sample ID	Client ID
12024792	Method Blank (MB)
12024793	Laboratory Control Sample (LCS)
12024794	Laboratory Control Sample Duplicate (LCSD)
12024795	15469001(J6-SC1b-20to30-82819) Matrix Spike (MS)
12024796	15469001(J6-SC1b-20to30-82819) Matrix Spike Duplicate (MSD)
15469001	J6-SC1b-20to30-82819
15469002	J6-SC1b-30to40-82819
15469003	J6-SC1b-40to50-82819
15469004	J6-SC1b-50to60-82819

15469015	H3-SC1b-40to50-82919
15469016	H3-SC1b-50to60-82919
15469017	H3-SC1b-60to70-82919
15469018	H3-SC1b-70to80-82919
15469019	H3-SC1b-80to90-82919
15469020	H3-SC1b-90to100-82919
15469021	H3-SC1b-100to110-82919
15469022	H3-SC1b-00to10-82819
15469023	H3-SC1b-10-20-82819

The samples in this SDG were analyzed on a "dry weight" basis.

SOP Reference
Procedure for preparation, analysis and reporting of analytical data are controlled by Cape Fear Analytical LLC (CFA) as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with CF-OA-E-002 REV# 15.

Raw data reports are processed and reviewed by the analyst using the TargetLynx software package.

Calibration Information

Initial Calibration
All initial calibration requirements have been met for this sample delivery group (SDG).

Continuing Calibration Verification (CCV) Requirements
All associated calibration verification standard(s) (CCV) met the acceptance criteria.

Quality Control (QC) Information

Certification Statement
The test results presented in this document are certified to meet all requirements of the 2009 TNI Standard.

Method Blank (MB) Statement
The MB(s) analyzed with this SDG met the acceptance criteria.

Surrogate Recoveries
All surrogate recoveries were within the established acceptance criteria for this SDG.

Laboratory Control Sample (LCS) Recovery
The LCS spike recoveries met the acceptance limits.

Laboratory Control Sample Duplicate (LCSD) Recovery
The LCSD spike recoveries met the acceptance limits.

LCS/LCSD Relative Percent Difference (RPD) Statement
The RPD(s) between the LCS and LCSD met the acceptance limits.

QC Sample Designation
Sample 15469001 (J6-SC1b-20to30-82819)- Batch 41747 was selected for analysis as the matrix spike and matrix spike duplicate.

Matrix Spike/Duplicate (MS/MSD) Recovery Statement
The MS recoveries for this SDG were not within the acceptance limits. The failures confirm in the matrix spike duplicate and are attributed to matrix interference. 12024795 (J6-SC1b-20to30-82819) and 12024796 (J6-SC1b-20to30-82819)- Batch 41747.

MS/MSD Relative Percent Difference (RPD) Statement
The relative percent differences (RPD) between each MS and MSD were not within the required acceptance limits. Sample data is validated based on acceptable LCS/LCSD results. 12024796 (J6-SC1b-20to30-82819)- Batch 41747.

Technical Information

Holding Time Specifications
CFA assigns holding times based on the associated methodology, which assigns the date and time from sample collection. Those holding times expressed in hours are calculated in the AlphaLIMS system. Those holding times expressed as days expire at midnight on the day of expiration. All samples in this SDG met the specified holding time.

Preparation/Analytical Method Verification
All procedures were performed as stated in the SOP.

Sample Dilutions
The samples in this SDG did not require dilutions.

Sample Re-extraction/Re-analysis
Re-extractions or re-analyses were not required in this SDG.

Miscellaneous Information

Nonconformance (NCR) Documentation
The following NCR was generated for this SDG: 647562 12024795 (J6-SC1b-20to30-82819) and 12024796 (J6-SC1b-20to30-82819)- Batch 41747.

Manual Integrations
Certain standards and QC samples required manual integrations to correctly position the baseline as set in the calibration standard injections. Where manual integrations were performed, copies of all manual integration peak profiles are included in the raw data section of this fraction. Manual integrations were required for data files in this SDG.

Sample preparation
No difficulties were encountered during sample preparation.

Electronic Packaging Comment

This data package was generated using an electronic data processing program referred to as virtual packaging. In an effort to increase quality and efficiency, the laboratory has developed systems to generate all data packages electronically. The following change from traditional packages should be noted: Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. An electronic signature page inserted after the case narrative will include the data validator's signature and title. The signature page also includes the data qualifiers used in the fractional package. Data that are not generated electronically, such as hand written pages, will be scanned and inserted into the electronic package.

Sample Data Summary

Cape Fear Analytical, LLC

3306 Kitty Hawk Road Suite 120, Wilmington, NC 28405 - (910) 795-0421 - www.capefearanalytical.com

Qualifier Definition Report
for

PGWG001 Pacific Groundwater Group

Client SDG: 2006-00115_2 CFA Work Order: 15469

The Qualifiers in this report are defined as follows:

* A quality control analyte recovery is outside of specified acceptance criteria
** Analyte is a surrogate compound
B The target analyte was detected in the associated blank.
E Value is estimated - Concentration of the target analyte exceeds the instrument calibration range
J Value is estimated
K Estimated Maximum Possible Concentration
Q Quantitative Interference; value is estimated
U Analyte was analyzed for, but not detected above the specified detection limit.

DL Indicates that sample is diluted.
RA Indicates that sample is re-analyzed without re-extraction.
RE Indicates that sample is re-extracted.

Review/Validation

Cape Fear Analytical requires all analytical data to be verified by a qualified data reviewer.

The following data validator verified the information presented in this case narrative:

SDG: 2006-00115_3

Dear Mr. Parker:

Cape Fear Analytical LLC (CFA) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on August 30, 2019 and September 10, 2019. This original data report has been prepared and reviewed in accordance with CFA's standard operating procedures.

Our policy is to provide high quality, personalized analytical services to enable you to meet your analytical needs on time every time. We trust that you will find everything in order and to your satisfaction. If you have any questions, please do not hesitate to call me at 910-795-0421.

Sincerely,

Cynde Larkins

Thank you!

By the way - that "00to20" was my mistake. The COC and the label have "00to10". My apologies!

Subject: Swan Island sample receipt 30AUG19

Good afternoon,

CFA received your samples today for the Swan Island Lagoon project in good condition and within temperature. There are several discrepancies listed below that I need to your help to resolve.

1. Sample D6-SC1b-10to20-82619, collected 8/26/19 at 12:10, is marked on the COC for both 1613B analysis and Archive. The sample listed beneath this one, 411-SC1b-50to60-82619, collected 8/26/19 at 15:00 is not marked for either 1613B or Archive. It looks like one of the X's is on the wrong line perhaps? Please advise.

2. There were no bottles received for sample 712-82819. Two containers were received for 711-82719.

3. There are sample ID discrepancies between the COC and the labels for the samples listed in the table below (collection dates and times match). Please verify which ID should be used for log in.

ID on COC	ID on label
J6-SC1b-00to10-82719	J6-SC1-00to10-82719
J6-SC1b-10to20-082719	J6-SC1-10to20-82719
L3-SC1b-00to20-82619	L3-SC2-00to20-82619
L3-SC1b-10to20-82619	L3-SC2-10to20-82619
D6-SC1b-10to20-82619	D6-SC2-10to20-82619

Thank you!

To: Chris Cornwell <chr00735@cfanalytical.com>
CC: Janet Knox <janet@PGWG.COM>

Hi Chris,
Yes, please order 3 of the EDF-5183 (Cambridge SRM). I think the frequency of 1 per SDG (for 3 of the 4 SDGs Cynde is creating) makes sense.

Happy Holiday Weekend,
Jeff

Jeff,

Looks like we received about 75 samples. Everything looks OK receipt wise, Cynde is logging in now.

We have the Wellington SRM, not the Cambridge one. Want me to order the Cambridge? What frequency would you like for SRM's?

Having these logged in for method 1613, reporting J flags down to the EDL, EMPC's reported with a K flag.

Happy Friday!

HI Cynde,

Can you send me copies of the COCs or the login file when you get a chance. We taped the COCs in the cooler before making copies and I didn't get a count of the # analyzed. We may need to remove a couple if we're way over our scope.

Also, I need to communicate with Chris about ordering the EDF-5183 (Cambridge SRM) to run with this batch. So, please hold the samples until we get those ordered and added too.

Thanks!
Jeff

Certificate of Analysis

Clean Soil Reference Material

Catalog Number:	EDF-5183
Lot Number:	ER10091501
Expiration Date:	May 2023
Matrix:	Soil
Amount per Vial:	10 g
Storage and Handling:	Freezer.

Intended Use: For laboratory use only. This product is a sample of homogeneous soil matrix taken from an area where no known chemical contamination has occurred. This sample is intended for use in evaluating the performance of an analytical laboratory for the listed analytes.

Preparation: "Clean" soil was obtained from a location in Texas which was expected to contain minimal contamination. The soil was sieved to achieve uniform particle size and homogenized to within 5% using a disodium fluorescein indicator. Samples were then sterilized three times for two hours at 121°C and 15 psi.

Interlaboratory Analysis: This product was included in the Second Round of International Interlaboratory Study conducted by Cambridge Isotope Laboratories and Cerilliant Corporation. Participating laboratories used a variety of sample preparation and analytical techniques. The results listed below supersede those obtained in the First Round of Interlaboratory Study. This Second Round of Interlaboratory Study adds consensus values for one new dioxin, seventeen new PCBs, ten BDEs, and two new PAHs.

Interlaboratory Results: Results of the international interlaboratory study are attached. Consensus values were independently assigned by Manna Associates in the UK using the Cofino model of statistical analysis. These numbers are certified reference values. All values are presented at three significant figures. Analytes with fewer than five laboratories contributing acceptable data do not have assigned values reported in this study.

Cerilliant certifies that this standard meets or exceeds the specifications stated in this data sheet.

2,2',3,3',4,4',5,5'-Octachlorobiphenyl (#194)	182	22.3	182 ± 44.6	7
2,2',3,3',4,4',5,6-Octachlorobiphenyl (#195)	90.6	8.61	90.6 ± 17.2	7
2,2',3,3',4,5,6,6'-Octachlorobiphenyl (#199)	229	17.1	229 ± 34.2	6
2,2',3,3',4,4',5,5',6-Nonachlorobiphenyl (#206)[5]	74.8	54.1	74.8 ± 108	7
2,2',3,3',4,5,5',6,6'-Nonachlorobiphenyl (#208)[5]	38.3	30.7	38.3 ± 61.4	7
Decachlorobiphenyl (#209)	12.9	11.5	12.9 ± 23.0	7

Interlaboratory Results (continued):

Compound	Assigned [1] Value (ng/kg)	Standard Deviation	Reference [2] Value (ng/kg)	(n) [3]
Brominated diphenyl ethers [6]				
2,2',4-Tribromodiphenyl ether (#17)	4.80	3.05	4.80 ± 6.10	7
2,4,4'-Tribromodiphenyl ether (#28)	38.0	39.9	38.0 ± 79.8	11
2,2',4,4'-Tetrabromodiphenyl ether (#47)	192	123	192 ± 246	11
2,2',4,5'-Tetrabromodiphenyl ether (#49)	24.4	9.86	24.4 ± 19.7	5
2,3',4,4'-Tetrabromodiphenyl ether (#66)	12.6	5.46	12.6 ± 10.9	8
2,2',3,4,4'-Pentabromodiphenyl ether (#85)	19.5	8.97	19.5 ± 17.9	8
2,2',4,4',5-Pentabromodiphenyl ether (#99)	213	93.0	213 ± 186	11
2,2',4,4',6-Pentabromodiphenyl ether (#100)	55.4	15.5	55.4 ± 31.0	11
2,2',3,4,4',5-Hexabromodiphenyl ether (#138)	25.8	12.9	25.8 ± 25.8	9
2,2',4,4',5,5'-Hexabromodiphenyl ether (#153)	111	12.0	111 ± 24.0	11
2,2',4,4',5,6'-Hexabromodiphenyl ether (#154)	46.0	13.3	46.0 ± 26.6	11
2,2',3,4,4',5',6-Heptabromodiphenyl ether (#183)	286	35.4	286 ± 70.8	11
Decabromodiphenyl ether (#209)	1,930	1,150	1,930 ± 2,300	7
Polyaromatic hydrocarbons				
Anthracene	9,650	2,990	9,650 ± 5,980	6
Benz[*a*]anthracene	11,200	4,710	11,200 ± 9,420	7
Benzo[*b*]fluoranthene	18,100	9,580	18,100 ± 19,200	7
Benzo[*k*]fluoranthene	5,870	1,660	5,870 ± 3,320	7
Benzo[*g* ,*h* ,*i*]perylene	8,280	1,300	8,280 ± 2,600	7
Benzo[*a*]pyrene	7,620	3,080	7,620 ± 6,160	7
Chrysene	16,000	3,750	16,000 ± 7,500	7
Fluoranthene	33,000	5,170	33,000 ± 10,300	7
Indeno[1,2,3-*cd*]pyrene	9,550	2,070	9,550 ± 4,140	7
Phenanthrene	25,900	19,100	25,900 ± 38,200	6
Pyrene	26,300	4,340	26,300 ± 8,680	7

[1] Assigned Value as determined by Manna Associates in the UK using Cofino analysis of raw interlaboratory study data.

[2] Reference Value is the Assigned Value plus or minus two standard deviations. Negative numbers resulting from two standard deviations being greater than the assigned value have no significance.

[3] Number of laboratories providing results for this analyte.

[4] All numbers in parentheses refer to the IUPAC designation for the compound.

[5] Assigned values from the First Round of International Interlaboratory Study.

[6] All numbers in parentheses refer to the IUPAC designation for the related PCB congener.

COA Revision History

Revision No.	Date	Reason for Revision
00	December 02, 2015	Initial version

1. PRODUCT AND COMPANY IDENTIFICATION

1.1 Product identifiers

Product name : Clean Soil Reference Material 2003

Product Number : EDF-5183
Brand : Cerilliant

1.2 Relevant identified uses of the substance or mixture and uses advised against

Identified uses : Laboratory chemicals, Manufacture of substances

1.3 Details of the supplier of the safety data sheet

Company : Sigma-Aldrich
3050 Spruce Street
SAINT LOUIS MO 63103
USA

Telephone : +1 800-325-5832
Fax : +1 800-325-5052

1.4 Emergency telephone number

Emergency Phone # : (314) 776-6555

2. HAZARDS IDENTIFICATION

2.1 Classification of the substance or mixture

Not a hazardous substance or mixture.

2.2 GHS Label elements, including precautionary statements

Not a hazardous substance or mixture.

2.3 Hazards not otherwise classified (HNOC) or not covered by GHS - none

3. COMPOSITION/INFORMATION ON INGREDIENTS

3.1 Substances

No components need to be disclosed according to the applicable regulations.

4. FIRST AID MEASURES

4.1 Description of first aid measures

If inhaled
If breathed in, move person into fresh air. If not breathing, give artificial respiration.

In case of skin contact
Wash off with soap and plenty of water.

In case of eye contact
Flush eyes with water as a precaution.

If swallowed
Never give anything by mouth to an unconscious person. Rinse mouth with water.

4.2 Most important symptoms and effects, both acute and delayed

The most important known symptoms and effects are described in the labelling (see section 2.2) and/or in section 11

4.3 Indication of any immediate medical attention and special treatment needed
No data available

5. FIREFIGHTING MEASURES

5.1 Extinguishing media

Suitable extinguishing media
Use water spray, alcohol-resistant foam, dry chemical or carbon dioxide.

5.2 Special hazards arising from the substance or mixture
Nature of decomposition products not known.

5.3 Advice for firefighters
Wear self-contained breathing apparatus for firefighting if necessary.

5.4 Further information
No data available

6. ACCIDENTAL RELEASE MEASURES

6.1 Personal precautions, protective equipment and emergency procedures
Avoid dust formation. Avoid breathing vapours, mist or gas.
For personal protection see section 8.

6.2 Environmental precautions
No special environmental precautions required.

6.3 Methods and materials for containment and cleaning up
Sweep up and shovel. Keep in suitable, closed containers for disposal.

6.4 Reference to other sections
For disposal see section 13.

7. HANDLING AND STORAGE

7.1 Precautions for safe handling
Further processing of solid materials may result in the formation of combustible dusts. The potential for combustible dust formation should be taken into consideration before additional processing occurs.
Provide appropriate exhaust ventilation at places where dust is formed.
For precautions see section 2.2.

7.2 Conditions for safe storage, including any incompatibilities
Keep container tightly closed in a dry and well-ventilated place.
Storage class (TRGS 510): Non Combustible Solids

7.3 Specific end use(s)
Apart from the uses mentioned in section 1.2 no other specific uses are stipulated

8. EXPOSURE CONTROLS/PERSONAL PROTECTION

8.1 Control parameters

Components with workplace control parameters
Contains no substances with occupational exposure limit values.

8.2 Exposure controls

Appropriate engineering controls
General industrial hygiene practice.

Personal protective equipment

Eye/face protection
Use equipment for eye protection tested and approved under appropriate government standards such as NIOSH (US) or EN 166(EU).

Skin protection
Handle with gloves. Gloves must be inspected prior to use. Use proper glove removal technique (without touching glove's outer surface) to avoid skin contact with this product. Dispose of contaminated gloves after use in accordance with applicable laws and good laboratory practices. Wash and dry hands.

Body Protection
Choose body protection in relation to its type, to the concentration and amount of dangerous substances, and to the specific work-place., The type of protective equipment must be selected according to the concentration and amount of the dangerous substance at the specific workplace.

Respiratory protection
Respiratory protection is not required. Where protection from nuisance levels of dusts are desired, use type N95 (US) or type P1 (EN 143) dust masks. Use respirators and components tested and approved under appropriate government standards such as NIOSH (US) or CEN (EU).

Control of environmental exposure
No special environmental precautions required.

9. PHYSICAL AND CHEMICAL PROPERTIES

9.1 Information on basic physical and chemical properties

a)	Appearance	Form: solid
b)	Odour	No data available
c)	Odour Threshold	No data available
d)	pH	No data available
e)	Melting point/freezing point	No data available
f)	Initial boiling point and boiling range	No data available
g)	Flash point	No data available
h)	Evaporation rate	No data available
i)	Flammability (solid, gas)	No data available
j)	Upper/lower flammability or explosive limits	No data available
k)	Vapour pressure	No data available
l)	Vapour density	No data available
m)	Relative density	No data available
n)	Water solubility	No data available
o)	Partition coefficient: n-octanol/water	No data available
p)	Auto-ignition temperature	No data available
q)	Decomposition temperature	No data available
r)	Viscosity	No data available
s)	Explosive properties	No data available
t)	Oxidizing properties	No data available

9.2 Other safety information
No data available

10. STABILITY AND REACTIVITY

10.1 Reactivity
No data available

10.2 Chemical stability
Stable under recommended storage conditions.

10.3 Possibility of hazardous reactions
No data available

10.4 Conditions to avoid
No data available

10.5 Incompatible materials
Strong oxidizing agents

10.6 Hazardous decomposition products
Other decomposition products - No data available
In the event of fire: see section 5

11. TOXICOLOGICAL INFORMATION

11.1 Information on toxicological effects

Acute toxicity
No data available

Inhalation: No data available

Dermal: No data available

No data available

Skin corrosion/irritation
No data available

Serious eye damage/eye irritation
No data available

Respiratory or skin sensitisation
No data available

Germ cell mutagenicity
No data available

Carcinogenicity

IARC: No component of this product present at levels greater than or equal to 0.1% is identified as probable, possible or confirmed human carcinogen by IARC.

ACGIH: No component of this product present at levels greater than or equal to 0.1% is identified as a carcinogen or potential carcinogen by ACGIH.

NTP: No component of this product present at levels greater than or equal to 0.1% is identified as a known or anticipated carcinogen by NTP.

OSHA: No component of this product present at levels greater than or equal to 0.1% is identified as a carcinogen or potential carcinogen by OSHA.

Reproductive toxicity
No data available

No data available

Specific target organ toxicity - single exposure
No data available

Specific target organ toxicity - repeated exposure
No data available

Aspiration hazard
No data available

Additional Information
RTECS: Not available

To the best of our knowledge, the chemical, physical, and toxicological properties have not been thoroughly investigated.

12. ECOLOGICAL INFORMATION

12.1 Toxicity
No data available

12.2 Persistence and degradability
No data available

12.3 Bioaccumulative potential
No data available

12.4 Mobility in soil
No data available

12.5 Results of PBT and vPvB assessment
PBT/vPvB assessment not available as chemical safety assessment not required/not conducted

12.6 Other adverse effects

No data available

13. DISPOSAL CONSIDERATIONS

13.1 Waste treatment methods

Product
Offer surplus and non-recyclable solutions to a licensed disposal company.

Contaminated packaging
Dispose of as unused product.

14. TRANSPORT INFORMATION

DOT (US)

IMDG

IATA

15. REGULATORY INFORMATION

SARA 302 Components
No chemicals in this material are subject to the reporting requirements of SARA Title III, Section 302.

SARA 313 Components
This material does not contain any chemical components with known CAS numbers that exceed the threshold (De Minimis) reporting levels established by SARA Title III, Section 313.

SARA 311/312 Hazards
No SARA Hazards

Massachusetts Right To Know Components
No components are subject to the Massachusetts Right to Know Act.

Pennsylvania Right To Know Components

	CAS-No.	Revision Date
Soil	-	

New Jersey Right To Know Components

	CAS-No.	Revision Date

Soil

California Prop. 65 Components
This product does not contain any chemicals known to State of California to cause cancer, birth defects, or any other reproductive harm.

16. OTHER INFORMATION

HMIS Rating

Health hazard:	0
Chronic Health Hazard:	
Flammability:	0
Physical Hazard	0

NFPA Rating

Health hazard:	0
Fire Hazard:	0
Reactivity Hazard:	0

High Resolution Dioxins and Furans Analysis

Case Narrative

HDOX Case Narrative
Pacific Groundwater Group (PGWG)
SDG 2006-00115_3
Work Order 15470

Method/Analysis Information

Product: **Dioxins/Furans by EPA Method 1613B in Solids**
Analytical Method: EPA Method 1613B
Extraction Method: SW846 3540C
Analytical Batch Number: 41713, 41778
Clean Up Batch Number: 41712, 41777
Extraction Batch Number: 41711, 41776

Sample Analysis

Samples were received at 3.3°C (15470001, 15470002, 15470003, 15470004, 15470005, 15470006, 15470007, 15470008, 15470009, 15470010, 15470011, 15470012, 15470013, 15470014, 15470015, 15470016, 15470017, 15470018, 15470019, 15470020, 15470021, 15470022) and ambient. (15470023). The following samples were analyzed using the analytical protocol as established in Method 1613B:

Sample ID	Client ID
12024755	Method Blank (MB)
12024756	Laboratory Control Sample (LCS)
12024757	Laboratory Control Sample Duplicate (LCSD)
12024827	Method Blank (MB)
12024828	Laboratory Control Sample (LCS)
12024829	Laboratory Control Sample Duplicate (LCSD)
12024830	15470018(J3-SC1b-70to80-82719) Matrix Spike (MS)
12024831	15470018(J3-SC1b-70to80-82719) Matrix Spike Duplicate (MSD)
15470001	D6-SC1b-20to30-82619
15470002	D6-SC1b-30to40-82619
15470003	D6-SC1b-40to50-82619
15470004	D6-SC1b-50to60-82619
15470005	D6-SC1b-60to70-82619
15470006	D6-SC1b-70to80-82619
15470007	D6-SC1b-80to90-82619
15470008	D6-SC1b-90to100-82619
15470009	D6-SC1b-100to110-82619

15470013	J3-SC1b-20to30-82719
15470014	J3-SC1b-30to40-82719
15470015	J3-SC1b-40to50-82719
15470016	J3-SC1b-50to60-82719
15470017	J3-SC1b-60to70-82719
15470018	J3-SC1b-70to80-82719
15470019	J3-SC1b-80to90-82719
15470020	J3-SC1b-90to100-82719
15470021	J3-SC1b-10to20-82719
15470022	412-SC1b-80to90-82719
15470023	SRM Lot# ER10091501

Samples 15470 001, 002, 003, 004, 005, 006, 007, 008, 009, 010, 011, 012, 013, 014, 015, 016, 017, 018, 019, 020, 021 and 022 in this SDG were analyzed on a "dry weight" basis. Sample 15470 023 in this SDG was analyzed on an "as received" basis.

SOP Reference
Procedure for preparation, analysis and reporting of analytical data are controlled by Cape Fear Analytical LLC (CFA) as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with CF-OA-E-002 REV# 15.

Raw data reports are processed and reviewed by the analyst using the TargetLynx software package.

Calibration Information

Initial Calibration
All initial calibration requirements have been met for this sample delivery group (SDG).

Continuing Calibration Verification (CCV) Requirements
All associated calibration verification standard(s) (CCV) met the acceptance criteria.

Quality Control (QC) Information

Certification Statement
The test results presented in this document are certified to meet all requirements of the 2009 TNI Standard.

Method Blank (MB) Statement
The MB(s) analyzed with this SDG met the acceptance criteria.

Surrogate Recoveries
All surrogate recoveries were within the established acceptance criteria for this SDG.

Laboratory Control Sample (LCS) Recovery

The LCS spike recoveries met the acceptance limits.

Laboratory Control Sample Duplicate (LCSD) Recovery
The LCSD spike recoveries met the acceptance limits.

LCS/LCSD Relative Percent Difference (RPD) Statement
The RPD(s) between the LCS and LCSD met the acceptance limits.

QC Sample Designation
Sample 15470018 (J3-SC1b-70to80-82719)- Batch 41778 was selected for analysis as the matrix spike and matrix spike duplicate.

Matrix Spike (MS) Recovery Statement
The MS recoveries were within the established acceptance limits.

MS/MSD Relative Percent Difference (RPD) Statement
The RPDs between the MS and MSD met the acceptance limits.

Matrix Spike Duplicate (MSD) Recovery Statement
The MSD recoveries were within the established acceptance limits.

Technical Information

Holding Time Specifications
CFA assigns holding times based on the associated methodology, which assigns the date and time from sample collection. Those holding times expressed in hours are calculated in the AlphaLIMS system. Those holding times expressed as days expire at midnight on the day of expiration. All samples in this SDG met the specified holding time.

Preparation/Analytical Method Verification
All procedures were performed as stated in the SOP.

Sample Dilutions
The samples in this SDG did not require dilutions.

Sample Re-extraction/Re-analysis
Re-extractions or re-analyses were not required in this SDG.

Miscellaneous Information

Nonconformance (NCR) Documentation
A NCR was not required for this SDG.

Manual Integrations
Certain standards and QC samples required manual integrations to correctly position the baseline as set in the calibration standard injections. Where manual integrations were performed, copies

of all manual integration peak profiles are included in the raw data section of this fraction. Manual integrations were required for data files in this SDG.

Sample preparation
No difficulties were encountered during sample preparation.

Electronic Packaging Comment

This data package was generated using an electronic data processing program referred to as virtual packaging. In an effort to increase quality and efficiency, the laboratory has developed systems to generate all data packages electronically. The following change from traditional packages should be noted: Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. An electronic signature page inserted after the case narrative will include the data validator's signature and title. The signature page also includes the data qualifiers used in the fractional package. Data that are not generated electronically, such as hand written pages, will be scanned and inserted into the electronic package.

Sample Data Summary

Cape Fear Analytical, LLC

3306 Kitty Hawk Road Suite 120, Wilmington, NC 28405 - (910) 795-0421 - www.capefearanalytical.com

Qualifier Definition Report
for

PGWG001 Pacific Groundwater Group

Client SDG: 2006-00115_3 CFA Work Order: 15470

The Qualifiers in this report are defined as follows:

* A quality control analyte recovery is outside of specified acceptance criteria

** Analyte is a surrogate compound

B The target analyte was detected in the associated blank.

E Value is estimated - Concentration of the target analyte exceeds the instrument calibration range

J Value is estimated

K Estimated Maximum Possible Concentration

Q Quantitative Interference; value is estimated

U Analyte was analyzed for, but not detected above the specified detection limit.

DL Indicates that sample is diluted.

RA Indicates that sample is re-analyzed without re-extraction.

RE Indicates that sample is re-extracted.

Review/Validation

Cape Fear Analytical requires all analytical data to be verified by a qualified data reviewer.

The following data validator verified the information presented in this case narrative:

Re: Swan Island Lagoon Sediment Investigation
Work Order: 15471
SDG: 2006-00115_4

Dear Mr. Parker:

Cape Fear Analytical LLC (CFA) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on August 30, 2019, September 04, 2019 and September 10, 2019. This original data report has been prepared and reviewed in accordance with CFA's standard operating procedures.

Our policy is to provide high quality, personalized analytical services to enable you to meet your analytical needs on time every time. We trust that you will find everything in order and to your satisfaction. If you have any questions, please do not hesitate to call me at 910-795-0421.

Sincerely,

Cynde Larkins

Thank you!

By the way - that "00to20" was my mistake. The COC and the label have "00to10". My apologies!

Subject: Swan Island sample receipt 30AUG19

Good afternoon,

CFA received your samples today for the Swan Island Lagoon project in good condition and within temperature. There are several discrepancies listed below that I need to your help to resolve.

1. Sample D6-SC1b-10to20-82619, collected 8/26/19 at 12:10, is marked on the COC for both 1613B analysis and Archive. The sample listed beneath this one, 411-SC1b-50to60-82619, collected 8/26/19 at 15:00 is not marked for either 1613B or Archive. It looks like one of the X's is on the wrong line perhaps? Please advise.

2. There were no bottles received for sample 712-82819. Two containers were received for 711-82719.

3. There are sample ID discrepancies between the COC and the labels for the samples listed in the table below (collection dates and times match). Please verify which ID should be used for log in.

ID on COC	ID on label
J6-SC1b-00to10-82719	J6-SC1-00to10-82719
J6-SC1b-10to20-082719	J6-SC1-10to20-82719
L3-SC1b-00to20-82619	L3-SC2-00to20-82619
L3-SC1b-10to20-82619	L3-SC2-10to20-82619
D6-SC1b-10to20-82619	D6-SC2-10to20-82619

Thank you!

To: Chris Cornwell <chr00735@cfanalytical.com>
CC: Janet Knox <janet@PGWG.COM>

Hi Chris,
Yes, please order 3 of the EDF-5183 (Cambridge SRM). I think the frequency of 1 per SDG (for 3 of the 4 SDGs Cynde is creating) makes sense.

Happy Holiday Weekend,
Jeff

Subject: Re: Fwd: RE: Swan Island sample receipt 30AUG19

Jeff,

Looks like we received about 75 samples. Everything looks OK receipt wise, Cynde is logging in now.

We have the Wellington SRM, not the Cambridge one. Want me to order the Cambridge? What frequency would you like for SRM's?

Having these logged in for method 1613, reporting J flags down to the EDL, EMPC's reported with a K flag.

Happy Friday!

HI Cynde,

Can you send me copies of the COCs or the login file when you get a chance. We taped the COCs in the cooler before making copies and I didn't get a count of the # analyzed. We may need to remove a couple if we're way over our scope.

Also, I need to communicate with Chris about ordering the EDF-5183 (Cambridge SRM) to run with this batch. So, please hold the samples until we get those ordered and added too.

Thanks!
Jeff

Certificate of Analysis

Clean Soil Reference Material

Catalog Number:	EDF-5183
Lot Number:	ER10091501
Expiration Date:	May 2023
Matrix:	Soil
Amount per Vial:	10 g
Storage and Handling:	Freezer.

Intended Use: For laboratory use only. This product is a sample of homogeneous soil matrix taken from an area where no known chemical contamination has occurred. This sample is intended for use in evaluating the performance of an analytical laboratory for the listed analytes.

Preparation: "Clean" soil was obtained from a location in Texas which was expected to contain minimal contamination. The soil was sieved to achieve uniform particle size and homogenized to within 5% using a disodium fluorescein indicator. Samples were then sterilized three times for two hours at 121°C and 15 psi.

Interlaboratory Analysis: This product was included in the Second Round of International Interlaboratory Study conducted by Cambridge Isotope Laboratories and Cerilliant Corporation. Participating laboratories used a variety of sample preparation and analytical techniques. The results listed below supersede those obtained in the First Round of Interlaboratory Study. This Second Round of Interlaboratory Study adds consensus values for one new dioxin, seventeen new PCBs, ten BDEs, and two new PAHs.

Interlaboratory Results: Results of the international interlaboratory study are attached. Consensus values were independently assigned by Manna Associates in the UK using the Cofino model of statistical analysis. These numbers are certified reference values. All values are presented at three significant figures. Analytes with fewer than five laboratories contributing acceptable data do not have assigned values reported in this study.

Cerilliant certifies that this standard meets or exceeds the specifications stated in this data sheet.

[1] Assigned Value as determined by Manna Associates in the UK using Cofino analysis of raw interlaboratory study data.

[2] Reference Value is the Assigned Value plus or minus two standard deviations. Negative numbers resulting from two standard deviations being greater than the assigned value have no significance.

[3] Number of laboratories providing results for this analyte.

[4] All numbers in parentheses refer to the IUPAC designation for the compound.

[5] Assigned values from the First Round of International Interlaboratory Study.

[6] All numbers in parentheses refer to the IUPAC designation for the related PCB congener.

COA Revision History

Revision No.	Date	Reason for Revision
00	December 02, 2015	Initial version

1. PRODUCT AND COMPANY IDENTIFICATION

1.1 Product identifiers

Product name : Clean Soil Reference Material 2003

Product Number : EDF-5183
Brand : Cerilliant

1.2 Relevant identified uses of the substance or mixture and uses advised against

Identified uses : Laboratory chemicals, Manufacture of substances

1.3 Details of the supplier of the safety data sheet

Company : Sigma-Aldrich
3050 Spruce Street
SAINT LOUIS MO 63103
USA

Telephone : +1 800-325-5832
Fax : +1 800-325-5052

1.4 Emergency telephone number

Emergency Phone # : (314) 776-6555

2. HAZARDS IDENTIFICATION

2.1 Classification of the substance or mixture

Not a hazardous substance or mixture.

2.2 GHS Label elements, including precautionary statements

Not a hazardous substance or mixture.

2.3 Hazards not otherwise classified (HNOC) or not covered by GHS - none

3. COMPOSITION/INFORMATION ON INGREDIENTS

3.1 Substances

No components need to be disclosed according to the applicable regulations.

4. FIRST AID MEASURES

4.1 Description of first aid measures

If inhaled
If breathed in, move person into fresh air. If not breathing, give artificial respiration.

In case of skin contact
Wash off with soap and plenty of water.

In case of eye contact
Flush eyes with water as a precaution.

If swallowed
Never give anything by mouth to an unconscious person. Rinse mouth with water.

4.2 Most important symptoms and effects, both acute and delayed

The most important known symptoms and effects are described in the labelling (see section 2.2) and/or in section 11

4.3 Indication of any immediate medical attention and special treatment needed
No data available

5. FIREFIGHTING MEASURES

5.1 Extinguishing media

Suitable extinguishing media
Use water spray, alcohol-resistant foam, dry chemical or carbon dioxide.

5.2 Special hazards arising from the substance or mixture
Nature of decomposition products not known.

5.3 Advice for firefighters
Wear self-contained breathing apparatus for firefighting if necessary.

5.4 Further information
No data available

6. ACCIDENTAL RELEASE MEASURES

6.1 Personal precautions, protective equipment and emergency procedures
Avoid dust formation. Avoid breathing vapours, mist or gas.
For personal protection see section 8.

6.2 Environmental precautions
No special environmental precautions required.

6.3 Methods and materials for containment and cleaning up
Sweep up and shovel. Keep in suitable, closed containers for disposal.

6.4 Reference to other sections
For disposal see section 13.

7. HANDLING AND STORAGE

7.1 Precautions for safe handling
Further processing of solid materials may result in the formation of combustible dusts. The potential for combustible dust formation should be taken into consideration before additional processing occurs.
Provide appropriate exhaust ventilation at places where dust is formed.
For precautions see section 2.2.

7.2 Conditions for safe storage, including any incompatibilities
Keep container tightly closed in a dry and well-ventilated place.
Storage class (TRGS 510): Non Combustible Solids

7.3 Specific end use(s)
Apart from the uses mentioned in section 1.2 no other specific uses are stipulated

8. EXPOSURE CONTROLS/PERSONAL PROTECTION

8.1 Control parameters

Components with workplace control parameters
Contains no substances with occupational exposure limit values.

8.2 Exposure controls

Appropriate engineering controls
General industrial hygiene practice.

Personal protective equipment

Eye/face protection
Use equipment for eye protection tested and approved under appropriate government standards such as NIOSH (US) or EN 166(EU).

Skin protection
Handle with gloves. Gloves must be inspected prior to use. Use proper glove removal technique (without touching glove's outer surface) to avoid skin contact with this product. Dispose of contaminated gloves after use in accordance with applicable laws and good laboratory practices. Wash and dry hands.

Body Protection
Choose body protection in relation to its type, to the concentration and amount of dangerous substances, and to the specific work-place., The type of protective equipment must be selected according to the concentration and amount of the dangerous substance at the specific workplace.

Respiratory protection
Respiratory protection is not required. Where protection from nuisance levels of dusts are desired, use type N95 (US) or type P1 (EN 143) dust masks. Use respirators and components tested and approved under appropriate government standards such as NIOSH (US) or CEN (EU).

Control of environmental exposure
No special environmental precautions required.

9. PHYSICAL AND CHEMICAL PROPERTIES

9.1 Information on basic physical and chemical properties

a)	Appearance	Form: solid
b)	Odour	No data available
c)	Odour Threshold	No data available
d)	pH	No data available
e)	Melting point/freezing point	No data available
f)	Initial boiling point and boiling range	No data available
g)	Flash point	No data available
h)	Evaporation rate	No data available
i)	Flammability (solid, gas)	No data available
j)	Upper/lower flammability or explosive limits	No data available
k)	Vapour pressure	No data available
l)	Vapour density	No data available
m)	Relative density	No data available
n)	Water solubility	No data available
o)	Partition coefficient: n-octanol/water	No data available
p)	Auto-ignition temperature	No data available
q)	Decomposition temperature	No data available
r)	Viscosity	No data available
s)	Explosive properties	No data available
t)	Oxidizing properties	No data available

9.2 Other safety information
No data available

10. STABILITY AND REACTIVITY

10.1 Reactivity
No data available

10.2 Chemical stability
Stable under recommended storage conditions.

10.3 Possibility of hazardous reactions
No data available

10.4 Conditions to avoid
No data available

10.5 Incompatible materials
Strong oxidizing agents

10.6 Hazardous decomposition products
Other decomposition products - No data available
In the event of fire: see section 5

11. TOXICOLOGICAL INFORMATION

11.1 Information on toxicological effects

Acute toxicity
No data available

Inhalation: No data available

Dermal: No data available

No data available

Skin corrosion/irritation
No data available

Serious eye damage/eye irritation
No data available

Respiratory or skin sensitisation
No data available

Germ cell mutagenicity
No data available

Carcinogenicity

IARC: No component of this product present at levels greater than or equal to 0.1% is identified as probable, possible or confirmed human carcinogen by IARC.

ACGIH: No component of this product present at levels greater than or equal to 0.1% is identified as a carcinogen or potential carcinogen by ACGIH.

NTP: No component of this product present at levels greater than or equal to 0.1% is identified as a known or anticipated carcinogen by NTP.

OSHA: No component of this product present at levels greater than or equal to 0.1% is identified as a carcinogen or potential carcinogen by OSHA.

Reproductive toxicity
No data available

No data available

Specific target organ toxicity - single exposure
No data available

Specific target organ toxicity - repeated exposure
No data available

Aspiration hazard
No data available

Additional Information
RTECS: Not available

To the best of our knowledge, the chemical, physical, and toxicological properties have not been thoroughly investigated.

12. ECOLOGICAL INFORMATION

12.1 Toxicity
No data available

12.2 Persistence and degradability
No data available

12.3 Bioaccumulative potential
No data available

12.4 Mobility in soil
No data available

12.5 Results of PBT and vPvB assessment
PBT/vPvB assessment not available as chemical safety assessment not required/not conducted

12.6 Other adverse effects

No data available

13. DISPOSAL CONSIDERATIONS

13.1 Waste treatment methods

Product
Offer surplus and non-recyclable solutions to a licensed disposal company.

Contaminated packaging
Dispose of as unused product.

14. TRANSPORT INFORMATION

DOT (US)

IMDG

IATA

15. REGULATORY INFORMATION

SARA 302 Components
No chemicals in this material are subject to the reporting requirements of SARA Title III, Section 302.

SARA 313 Components
This material does not contain any chemical components with known CAS numbers that exceed the threshold (De Minimis) reporting levels established by SARA Title III, Section 313.

SARA 311/312 Hazards
No SARA Hazards

Massachusetts Right To Know Components
No components are subject to the Massachusetts Right to Know Act.

Pennsylvania Right To Know Components

	CAS-No.	Revision Date
Soil	-	

New Jersey Right To Know Components

	CAS-No.	Revision Date

Soil

California Prop. 65 Components
This product does not contain any chemicals known to State of California to cause cancer, birth defects, or any other reproductive harm.

16. OTHER INFORMATION

HMIS Rating

Health hazard:	0
Chronic Health Hazard:	
Flammability:	0
Physical Hazard	0

NFPA Rating

Health hazard:	0
Fire Hazard:	0
Reactivity Hazard:	0

High Resolution Dioxins and Furans Analysis

Case Narrative

HDOX Case Narrative
Pacific Groundwater Group (PGWG)
SDG 2006-00115_4
Work Order 15471

Method/Analysis Information

Product: **Dioxins/Furans by EPA Method 1613B**
Analytical Method: EPA Method 1613B
Extraction Method: SW846 3520C, 3540C
Analytical Batch Number: 41726, 41761
Clean Up Batch Number: 41725, 41760
Extraction Batch Number: 41724, 41759

Sample Analysis

Samples were received at 3.8°C (15471001, 15471002, 15471003, 15471004, 15471005, 15471006, 15471007, 15471008, 15471009, 15471010, 15471011, 15471012, 15471013, 15471014, 15471015) , Ambient (15471016) , 3.3°C (15471017) and 4.2°C (15471018). The following samples were analyzed using the analytical protocol as established in EPA Method 1613B:

Sample ID	Client ID
12024769	Method Blank (MB)
12024770	Laboratory Control Sample (LCS)
12024771	Laboratory Control Sample Duplicate (LCSD)
12024810	Method Blank (MB)
12024811	Laboratory Control Sample (LCS)
12024812	Laboratory Control Sample Duplicate (LCSD)
12024813	15471001(J5-SC1b-20to30-82719) Matrix Spike (MS)
12024814	15471001(J5-SC1b-20to30-82719) Matrix Spike Duplicate (MSD)
15471001	J5-SC1b-20to30-82719
15471002	J5-SC1b-30to40-82719
15471003	J5-SC1b-40to50-82719
15471004	J5-SC1b-50to60-82719
15471005	J5-SC1b-60to70-82719
15471006	J5-SC1b-70to80-82719
15471007	J5-SC1b-80to90-82719
15471008	J5-SC1b-90to100-82719
15471009	J5-SC1b-100to110-82719
15471012	L3-SC1b-20to30-82619
15471013	L3-SC1b-30to40-82619

15471016	SRM Lot# ER10091501
15471017	711-82719
15471018	712-82819

Samples 15471 001, 002, 003, 004, 005, 006, 007, 008, 009, 010, 011, 012, 013, 014 and 015 in this SDG were analyzed on a "dry weight" basis. Samples 15471 016, 017 and 018 in this SDG were analyzed on an "as received" basis.

SOP Reference
Procedure for preparation, analysis and reporting of analytical data are controlled by Cape Fear Analytical LLC (CFA) as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with CF-OA-E-002 REV# 15.

Raw data reports are processed and reviewed by the analyst using the TargetLynx software package.

Calibration Information

Initial Calibration
All initial calibration requirements have been met for this sample delivery group (SDG).

Continuing Calibration Verification (CCV) Requirements
All associated calibration verification standard(s) (CCV) met the acceptance criteria.

Quality Control (QC) Information

Certification Statement
The test results presented in this document are certified to meet all requirements of the 2009 TNI Standard.

Method Blank (MB) Statement
The MB(s) analyzed with this SDG met the acceptance criteria.

Surrogate Recoveries
All surrogate recoveries were within the established acceptance criteria for this SDG.

Laboratory Control Sample (LCS) Recovery
The LCS spike recoveries met the acceptance limits.

Laboratory Control Sample Duplicate (LCSD) Recovery
The LCSD spike recoveries met the acceptance limits.

LCS/LCSD Relative Percent Difference (RPD) Statement
The RPD(s) between the LCS and LCSD met the acceptance limits.

QC Sample Designation

Sample 15471001 (J5-SC1b-20to30-82719)- Batch 41761 was selected for analysis as the matrix spike and matrix spike duplicate.

Matrix Spike (MS) Recovery Statement
The MS recoveies were outside the acceptance limits, possibly due to matrix interference. 12024813 (J5-SC1b-20to30-82719)- Batch 41761.

Matrix Spike Duplicate (MSD) Recovery Statement
One MSD recovery was outside acceptance limits. 12024814 (J5-SC1b-20to30-82719)- Batch 41761.

MS/MSD Relative Percent Difference (RPD) Statement
The relative percent differences (RPD) between each MS and MSD were not within the acceptance limits. Sample data is validated based on acceptable LCS/LCSD results. 12024814 (J5-SC1b-20to30-82719)- Batch 41761.

Technical Information

Holding Time Specifications
CFA assigns holding times based on the associated methodology, which assigns the date and time from sample collection. Those holding times expressed in hours are calculated in the AlphaLIMS system. Those holding times expressed as days expire at midnight on the day of expiration. All samples in this SDG met the specified holding time.

Preparation/Analytical Method Verification
All procedures were performed as stated in the SOP.

Sample Dilutions
The samples in this SDG did not require dilutions.
Sample Re-extraction/Re-analysis
Re-extractions or re-analyses were not required in this SDG.

Miscellaneous Information

Nonconformance (NCR) Documentation
The following NCR was generated for this SDG: 647556 12024814 (J5-SC1b-20to30-82719)- Batch 41761.

Manual Integrations
Certain standards and QC samples required manual integrations to correctly position the baseline as set in the calibration standard injections. Where manual integrations were performed, copies of all manual integration peak profiles are included in the raw data section of this fraction. Manual integrations were required for data files in this SDG.

Sample preparation
No difficulties were encountered during sample preparation.

Electronic Packaging Comment

This data package was generated using an electronic data processing program referred to as virtual packaging. In an effort to increase quality and efficiency, the laboratory has developed systems to generate all data packages electronically. The following change from traditional packages should be noted: Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. An electronic signature page inserted after the case narrative will include the data validator's signature and title. The signature page also includes the data qualifiers used in the fractional package. Data that are not generated electronically, such as hand written pages, will be scanned and inserted into the electronic package.

Sample Data Summary

Cape Fear Analytical, LLC

3306 Kitty Hawk Road Suite 120, Wilmington, NC 28405 - (910) 795-0421 - www.capefearanalytical.com

Qualifier Definition Report
for

PGWG001 Pacific Groundwater Group

Client SDG: 2006-00115_4 CFA Work Order: 15471

The Qualifiers in this report are defined as follows:

* A quality control analyte recovery is outside of specified acceptance criteria

** Analyte is a surrogate compound

B The target analyte was detected in the associated blank.

E Value is estimated - Concentration of the target analyte exceeds the instrument calibration range

J Value is estimated

K Estimated Maximum Possible Concentration

Q Quantitative Interference; value is estimated

U Analyte was analyzed for, but not detected above the specified detection limit.

DL Indicates that sample is diluted.
RA Indicates that sample is re-analyzed without re-extraction.
RE Indicates that sample is re-extracted.

Review/Validation

Cape Fear Analytical requires all analytical data to be verified by a qualified data reviewer.

The following data validator verified the information presented in this case narrative:

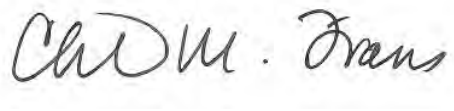
APPENDIX E
DATA VALIDATION REPORTS

DATA VALIDATION REPORT
Portland Harbor
Swan Island Lagoon Phases 1b & 2

Prepared for:

Pacific Groundwater Group
2377 Eastlake Avenue East, Suite 200
Seattle, Washington 98102



Prepared by:

EcoChem, Inc.
500 Union Street, Suite 1010
Seattle, Washington 98101

EcoChem Project: C27701-3

December 2, 2019

Approved for Release:

Christina Mott Frans
Project Manager
EcoChem, Inc.

PROJECT NARRATIVE

Basis for the Data Validation

This report presents the results of Summary and Full Validation (EPA Stage 2A and EPA Stage 4) performed on sediment and field and laboratory quality control sample data for samples collected at the Head of Swan Island Lagoon at Portland Harbor. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by TestAmerica Laboratories, Inc. Tacoma, Washington, TestAmerica Laboratories, Inc., Knoxville, Tennessee, TestAmerica Laboratories, Inc. Sacramento, California, ALS Environmental, Kelso, Washington, and Cape Fear Analytical LLC, Wilmington, North Carolina. The analytical methods and EcoChem project chemists are listed below.

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
PCB Congeners	EPA 1668A	E. Clayton	C. Frans
Dioxins/Furans	EPA 1613B		
Polycyclic Aromatic Hydrocarbons	SW8270D-SIM	R. Frans & E. Clayton	
BEHP	SW8270D	R. Frans	
Tributyltin	ALS SOP GC-FPD		
Organochlorine Pesticides	ALS SOP GC-MS/MS	R. Frans & E. Clayton	
PCB Aroclors	SW8082A	E. Clayton	
Diesel Range Organics	NWTPH-Dx		
Metals + Mercury	SW6020B & SW7471A		
Grain Size	ASTM D422		
Total Solids	SM 2540 G & EPA 160.3		
Specific Gravity & Density	SDTM D854		
Total Organic Carbon	SW9060		

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Head of Swan Island Lagoon Sediment Field Sampling Plan Portland Harbor Superfund Site* (Pacific Groundwater Group, October 22, 2018*); National Functional Guidelines for Organic Data Review* (USEPA 2008 & 2014); and *National Functional Guidelines for Inorganic Data Review* (USEPA 2010); *National Functional Guidelines for Chlorinated Dibenzo-p-Dioxins (CDDs) & Chlorinated Dibenzofurans (CDFs) Data Review,* (USEPA September 2011); and USEPA *R10 Data Validation and Review Guidelines for Polychlorinated Dibenzo-p-Dioxin and Polychlorinated Dibenzofuran Data (PCDD/PCDF) Using Method 1613B and SW846 Method 8290A (USEPA May 2014)*.

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned an R, the data are to be rejected and should not be used for

any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced previously.

Data qualifier definitions, reason codes, and validation criteria are included as Appendix A. A Qualified Data Summary Table is included in Appendix B. Data Validation Worksheets will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT
Pacific Groundwater Group: PH SIL Phases 1b & 2
Bis(2-ethylhexyl) phthalate by EPA SW8270D

This report documents the review of analytical data from the analysis of sediment and surface water samples and the associated laboratory quality control (QC) samples. Samples were analyzed by ALS Environmental, Inc., Kelso, Washington. Refer to the Sample Index for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
K1906902	19 Sediment	EPA Stage 4

DATA PACKAGE COMPLETENESS

With the following exception, the laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

The laboratory pdf report was missing the results for the internal standard compound, naphthalene-d8, on the summary form as well as the individual quantitation forms for the samples. Upon notification, the laboratory resubmitted the pdf data package with the missing information.

EDD TO HARDCOPY VERIFICATION

All sample IDs reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Ten percent (10%) of the sample results and laboratory QC results were also verified.

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table:

1	Sample Receipt, Preservation, and Holding Times	1	Field Duplicates
✓	GC/MS Instrument Performance	✓	Target Analyte List
✓	Initial Calibration (ICAL)	✓	Internal Standards
✓	Continuing Calibration (CCAL)	1	Certified Reference Material
✓	Laboratory Blanks	1	Reporting Limits
1	Field Blanks	✓	Reported Results
1	Surrogate Compounds	✓	Compound Identification
✓	Laboratory Control Samples (LCS)	1	Calculation Verification
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)		

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.
[1] Quality control results are discussed below, but no data were qualified.
[2] Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

The validation guidance documents state that the cooler temperatures should be within an advisory temperature range of 2° to 6°C. With the following exceptions noted below, the laboratory received the sample coolers within the advisory temperature range.

Two sample coolers were received with the temperature greater than the upper control limit at 6.1˚C and 6.2˚C. These outliers did not impact data quality and no qualifiers were required.

Samples analyzed in this data set were archived and frozen upon receipt; all analyses were completed within holding times.

Field Blanks

There were no field blank samples associated with this data set.

Surrogate Compounds

The surrogate compound, terphenyl-d14, was added to all field and batch QC samples. When %R values are below the laboratory control limits and indicate a potential low bias, associated results for the affected sample is estimated (J/UJ-13L). When %R values are greater than the laboratory control limit and indicate a potential high bias, only the positive result for a sample is estimated (J-13H). With the exception noted below, all surrogate spike recoveries were within the laboratory control limits.

The terphenyl-d14 %R values for Sample J2A3-0to18-101218 and the matrix spike duplicate for Sample 515-0to26-101918 were greater than the upper control limit. Sample J2A3-0to18-101218 was analyzed at a dilution factor of 10X preventing accurate quantitation of the surrogate and qualifiers are not applied to QC samples, therefore no qualifiers were required for either sample.

Matrix Spike/Matrix Spike Duplicates

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. No action is taken unless both the MS and MSD %R values are outside the control limits for MS/MSD %R outliers. Precision is evaluated using the RPD values calculated between the MS and MSD results. Any RPD values outside the control limits indicate uncertainty in the measured results for the sample. Qualifiers were only issued to the parent sample.

Sample 515-0TO26-101918 was used for the matrix spike analyses. The MS %R for bis(2-ethylhexyl) phthalate (BEHP) was greater than the upper control limit and the MSD %R was less than the lower control limit. The parent result was estimated (J-8) without a bias indicator as the matrix spike recoveries do not indicate a consistent bias. The RPD for bis(2-ethylhexyl) phthalate was greater than the control limit; the parent sample result for this analyte was estimated (J-9).

Field Duplicates

For sediment samples, the RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL. No data were qualified based on field duplicate precision outliers. Users of the data should consider the impact of field precision outliers on the reported results.

Samples M4-0to26-101918 & 515-0to26-101918 were submitted as field duplicates. The RPD value for BEHP was greater than the control limit at 81%.

Certified Reference Material

No certified reference materials were submitted.

Calculation Verification

Results were verified by recalculation from the raw data. No calculation or transcription errors were found.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed the specified analytical method. With the exceptions noted previously, accuracy was acceptable as demonstrated by the surrogate, LCS, and MS/MSD recovery values. With the exception noted above, precision was acceptable as demonstrated by the RPD values for the MS/MSD and field duplicate analyses.

One result was estimated due to MS/MSD accuracy and precision outliers.

All data, as qualified, are acceptable for use.

DATA VALIDATION REPORT
Pacific Groundwater Group: PH Head of Swan Island Sediments
Polynuclear Aromatic Hydrocarbon Compounds by EPA SW8270D-SIM

This report documents the review of analytical data from the analysis of sediment samples and the associated field and laboratory quality control (QC) samples. Samples were analyzed by ALS Environmental, Inc., Kelso, Washington. Refer to the Sample Index for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
K1906902	19 Sediments	EPA Stage 4
K1907934	65 Sediments & 2 Field Blank	EPA Stage 4

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

SDG K1907934: During validation it was determined that the laboratory used the incorrect initial calibration file to quantitate the samples analyzed on instrument MS20. The laboratory was notified and reprocessed the sample data using the correct initial calibration and resubmitted the data.

EDD TO HARDCOPY VERIFICATION

All sample IDs and results reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Ten percent (10%) of the laboratory QC results were also verified.

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table:

1	Sample Receipt, Preservation, and Holding Times	1	Field Duplicates
✓	GC/MS Instrument Performance	✓	Target Analyte List
✓	Initial Calibration (ICAL)	✓	Internal Standards
✓	Continuing Calibration (CCAL)	1	Certified Reference Material
2	Laboratory Blanks	1	Reporting Limits
1	Field Blanks	2	Reported Results
✓	Surrogate Compounds	✓	Compound Identification
2	Laboratory Control Samples (LCS/LCSD)	1	Calculation Verification
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)		

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.
[1] Quality control results are discussed below, but no data were qualified.
[2] Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

The validation guidance documents state that the cooler temperatures should be within an advisory temperature range of 2° to 6°C. With the following exception noted below, the laboratory received the sample coolers within the advisory temperature range.

SDG K1906902: Two sample coolers were received with the temperature greater than the upper control limit at 6.1˚C and 6.2˚C. These outliers did not impact data quality and no qualifiers were required.

Samples analyzed in this data set were archived and frozen upon receipt; all analyses were completed within holding times.

Laboratory Blanks

A method blank was analyzed at the required frequency of one per batch of 20 or fewer samples. Action levels were established at five times (5x) the concentration reported in the field blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U-7). No action is taken if the sample result is greater than the action level, or for non-detected results.

SDG K1906902: Pyrene, phenanthrene, fluoranthene, benzo(a)anthracene, and dibenzofuran were detected in the method blank above the MDL. Results in the associated samples that were less than the action level were qualified (U-7) as not detected at the reported concentrations.

SDG K1907934: In aqueous extraction batch 343632, phenanthrene, naphthalene, benzo(a)anthracene were detected; associated sample results less than the 5x action level were qualified as not detected (U-7) at the reported concentrations.

In sediment extraction batch 343658, phenanthrene was detected; associated sample results less than the 5x action level were qualified as not detected (U-7) at the reported concentrations.

Field Blanks

Field blanks were evaluated for impact of any contaminant on the reported sample results. Action levels were established at five times (5x) the concentration reported in the field blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U-6). No action is taken if the sample result is greater than the action level, or for non-detected results.

SDG K1907934: Samples 711-82719 and 712-82819 were submitted as field blanks. After evaluation of the method blank only 2-methylnaphthalene were detected. All associated sample results were either not detected or were greater than the 5x action level; no data were qualified.

Laboratory Control Samples

Laboratory control samples (LCS) and/or laboratory control sample/laboratory control sample duplicates (LCS/LCSD) were analyzed at the required frequency of one per batch of 20 or fewer samples. For batches with both and LCS and LCSD, no action is taken unless both the LCS and LCSD %R values are outside the control limits. Precision is evaluated using the relative percent difference (RPD) values calculated between the LCS and LCSD results.

When the LCS or LCS/LCSD %R values indicate a potential low bias, associated results are estimated (J/UJ-10L). Only associated positive results are estimated (J-10H) if the %R values indicate a potential high bias. Associated positive results are estimated (J-9) if the RPD values indicate uncertainty. Qualifiers were issued to all samples in the extraction batch.

SDG K1906902: The LCS recoveries for all target analytes except pyrene and benzo(b)fluoranthene were less than the workplan control limits of 70-130% with recovery values ranging from 55% to 69%. Associated sample results were estimated (J/UJ-10L) to indicate a potential low bias.

SDG K1907934: The LCS/LCSD recoveries for extraction batch 343655 were less that the workplan control limits for 2-methylnaphthalene, acenaphthene, acenaphthylene, dibenzofuran, fluoranthene, fluorene, naphthalene, and phenanthrene with recovery values ranging from 54% to 69%. Associated sample results were estimated (J-10L) to indicate a potential low bias.

The LCS/LCSD recoveries for extraction batch 343659 were less that the workplan control limits for 2-methylnaphthalene, acenaphthene, acenaphthylene, anthracene, benzo(g,h,i)perylene, dibenzofuran, fluoranthene, fluorene, naphthalene, and phenanthrene with recovery values ranging from 58% to 69%. Associated sample results were estimated (J-10L) to indicate a potential low bias. Additionally, the LCSD %R values for chrysene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene were less than the FSP lower control limits. No qualifiers were required for these single outliers.

The LCS/LCSD recoveries for extraction batch 343656 were less that the workplan control limits for 2-methylnaphthalene, acenaphthene, acenaphthylene, dibenzofuran, fluorene, naphthalene, and phenanthrene with recovery values ranging from 51% to 68%. Associated sample results were estimated (J-10L) to indicate a potential low bias. Additionally, the LCSD %R values for several other analytes were less than the workplan lower control limits. No qualifiers were required for these single outliers.

The LCS/LCSD recoveries for extraction batch 343658 were less that the workplan control limits for 2-methylnaphthalene and naphthalene with recovery values ranging from 64% to 67%. Associated sample results were estimated (J/UJ-10L) to indicate a potential low bias.

The LCS/LCSD recoveries for extraction batch 344130 were less that the workplan control limits for 2-methylnaphthalene, acenaphthene, acenaphthylene, anthracene, benzo(a)anthracene, benzo(g,h,i)perylene, chrysene, dibenzo(a,h)anthracene, dibenzofuran, fluoranthene, fluorene, indeno(1,2,3-cd)pyrene, naphthalene, and phenanthrene with recovery values ranging from 53% to 69%. Associated sample results were estimated (J-10L) to indicate a potential low bias. Additionally, the LCS %R values for benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, and pyrene were less than the workplan lower control limits. No qualifiers were required for these single outliers.

Matrix Spike/Matrix Spike Duplicates

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. No action is taken unless both the MS and MSD %R values are outside the workplan control limits for MS/MSD %R outliers. Precision is evaluated using the RPD values calculated between the MS and MSD results. Any RPD values outside the FSP control limits indicate uncertainty in the measured results for the sample. Qualifiers were only issued to the parent sample.

When the MS/MSD %R values indicate a potential low bias, associated results are estimated (JUJ-8L). Only the associated positive results are estimated (J-8H) if the %R values indicate a potential high bias. Associated positive results are estimated (J-9) if the RPD values indicate uncertainty.

SDG	Parent Sample ID	Analyte	MS %R	MSD %R	RPD	Potential Bias	Action
K1906902	M4-0TO26-101918	2-Methylnaphthalene	50	46	-	Low	J-8L
		Anthracene	55	55	-	Low	J-8L
		Benzo(a)anthracene	8	57	46	Low	J-8L, 9
		Benzo(a)pyrene	-3	35	-	Low	J-8L
		Benzo(b)fluoranthene	-32	14	47	Low	J-8L, 9
		Benzo(g,h,i)perylene	8	32	-	Low	J-8L
		Benzo(k)Fluoranthene	29	51	-	Low	J-8L
		Chrysene	-23	-	78	-	J-9
		Dibenzo(a,h)anthracene	51	53	-	Low	J-8L
		Dibenzofuran	60	54	-	Low	J-8L
		Fluoranthene	-43	-7	-	Low	J-8L
		Indeno(1,2,3-cd)pyrene	9	36	-	Low	J-8L
		Naphthalene	47	43	-	Low	J-8L
		Phenanthrene	14	29	-	Low	J-8L
		Pyrene	-50	-5	-	Low	J-8L

Field Duplicates

For sediment samples, the RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL. No data were qualified based on field duplicate precision outliers. Users of the data should consider the impact of field precision outliers on the reported results.

SDG K1906902: Samples M4-0to26-101918 & 515-0to26-101918 were submitted as field duplicates. The RPD or difference values were greater than the control limits for all target analytes except acenaphthylene. The RPD values ranged between 79% and 169%.

SDG K1907934: Samples D6-SC1b-50to60-82619 & 411-50to60-82619 were submitted as field duplicates. Field precision was acceptable.

Samples J3-SC1b-48to90-82719 & 413-SC1b-80to90-82719 were submitted as field duplicates. The difference value for acenaphthene was greater than 2X the RL; all other RPD and difference values were within the control limits.

Samples R4-SC1b-40to50-82819 & 413-SC1b-40to50-82819 were submitted as field duplicates. The RPD values for benzo(b)fluoranthene, benzo(g,h,i)perylene, chrysene, fluoranthene, fluorene, naphthalene, phenanthrene, and pyrene were greater than the control limit with RPD values between 52% and 103%. In addition, the difference values for acenaphthene, acenaphthylene, anthracene, benzo(a)anthracene, and dibenzofuran were greater than 2X the RL. All other RPD and difference values were within the control limits.

Certified Reference Material

No certified reference materials were submitted.

Reporting Limits

All SDGs: Reporting limits for naphthalene and 2-methylnaphlene are higher than the workplan specified values.

Reporting limits were elevated due to required dilutions for one or more samples.

Calculation Verification

All SDGs: Results were verified by recalculation from the raw data. No calculation or transcription errors were found.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed the specified analytical method. With the exceptions noted previously, accuracy was acceptable as demonstrated by the surrogate, LCS/LCSD, and MS/MSD recovery values. Precision was acceptable as demonstrated by the RPD values for the MS/MSD and field duplicate samples.

Results were qualified as not detected at the reported concentrations due to method blank contamination. Results were estimated due to LCS/LCSD recovery outliers and MS/MSD recovery outliers and RPD outliers.

All data, as qualified, are acceptable for use.

DATA VALIDATION REPORT
Pacific Groundwater Group: PH Head of Swan Island Sediments
Tributyltin by ALS SOP Organotin (GC-FPD)

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. Samples were analyzed by ALS Environmental, Inc., Kelso, Washington. Refer to the Sample Index for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
K1906902	19 Sediment	EPA Stage 4

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs and results reported in the electronic data deliverable (EDD) were verified (10% verification) by comparing the EDD to the laboratory data package.

TECHNICAL DATA VALIDATION

The QC requirements that were reviewed are listed below.

1	Sample Preservation and Holding Times	1	Matrix Spikes/Matrix Spike Duplicates
✓	Initial Calibration (ICAL)	✓	Laboratory Duplicates
1	Continuing Calibration (CCAL)	1	Field Duplicates
✓	Laboratory Blanks	1	Reporting Limits
1	Field Blanks	✓	Compound Identification
✓	Surrogate Compounds	✓	Reported Results
1	Laboratory Control Samples (LCS)	✓	Calculation Verification

✓ *Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed*

1 *Quality control outliers are discussed below, but no data were qualified.*

2 *Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.*

Sample Receipt, Preservation, and Holding Times

The validation guidance documents state that the cooler temperatures should be within an advisory temperature range of 2° to 6°C. With the following exceptions noted below, the laboratory received the sample coolers within the advisory temperature range.

Two sample coolers were received with the temperatures greater than the upper control limit at 6.1°C and 6.2°C. These outliers did not impact data quality and no qualifiers were required.

Continuing Calibration

A continuing calibration verification standard was analyzed at the required frequency. With the following exception; the percent difference (%D) values were within the criteria of ±25%.

The %D for the CCV from column 1 was greater than the upper control limit for tributyl tin; the associated sample results were reported from column 2 which was in control; no results were qualified.

Field Blanks

No field blanks were submitted with this sampling event.

Laboratory Control Samples

Laboratory control samples (LCS) were analyzed at the required frequency of one per batch of 20 or fewer samples. With the following exceptions, all spike recoveries were within the laboratory control limits.

The laboratory indicated in the case narrative that the LCS was spiked with a spiking standard that did not pass the laboratory's verification check for a new standard lot. An acceptable lot was not immediately obtainable, so an additional LCS/LCSD pair was extracted and analyzed with the batch from the previously used, but now expired standard. Because the LCS and LCSD recoveries form the additional QC samples were in control and indicated that although the spiking solution was expired that it had not degraded; no results were qualified.

Matrix Spike/Matrix Spike Duplicates

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. No action is taken unless both the MS and MSD %R values are outside the control limits for MS/MSD %R outliers. Precision is evaluated using the RPD values calculated between the MS and MSD results. Any RPD values outside the control limits indicate uncertainty in the measured results for the sample. Qualifiers were only issued to the parent sample.

When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-8). Only the associated positive results are estimated (J-8) if the %R values indicate a potential high bias. Associated positive results are estimated (J-9) if the RPD values indicate uncertainty.

The MS/MSD analyses were performed using sample A4-0TO25-100818 and although the %R values for tri-n-butyl tin were greater than upper control limit; the result in the parent sample was greater than four times the spike amount, therefore no results were qualified.

Laboratory Duplicates

There were no laboratory duplicates analyzed with this dataset.

Field Duplicates

For sediment samples, the RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL. No data were qualified based on field duplicate precision outliers. Users of the data should consider the impact of field precision outliers on the reported results.

SDG K1906902: Samples M4-0to26-101918 & 515-0to26-101918 were submitted as field duplicates. Field precision was acceptable.

Reporting Limits

The target reporting limits for samples were adjusted for sample size and required dilutions. No data were qualified.

Compound Identification

As required for gas chromatography methods, the laboratory analyzed any samples with positive detections on a confirmatory column. The results from the two analytical columns were compared for agreement. An elevated RPD value may indicate the presence of an interference resulting in a high bias. When the RPD value was greater than or equal to 40% but less than 60% the reported value was estimated (J-3). If the RPD value was greater than 60%, the result was qualified as a tentative identification (NJ-3). All confirmation results were within 40% RPD and no qualifiers were necessary.

Reported Results

No anomalies were noted during validation for evaluated results.

Calculation Verification

Several results in this SDG were verified by recalculation from the raw data. No calculation or transcription errors were found.

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory followed the specified analytical method. With the exceptions noted above, accuracy was acceptable, as demonstrated by the surrogate, LCS/LCSD, and MS/MSD percent recovery values. Precision was also acceptable as demonstrated by the LCS/LCSD, MS/MSD, and field duplicate relative percent difference values.

No data were qualified for any reason.

All data, as reported, are acceptable for use.

DATA VALIDATION REPORT
Pacific Groundwater Group: PH Head of Swan Island Sediments
Chlorinated Pesticides by ALS SOP PEST MSMS

This report documents the review of analytical data from the analyses of tissue samples and the associated laboratory quality control (QC) samples. Samples were analyzed by ALS Environmental, Kelso, Washington. Refer to the Sample Index for a list of samples reviewed.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
K1906902	19 Sediments	EPA Stage 4
K1907934	65 Sediments & 2 Field Blank	EPA Stage 2A

DATA PACKAGE COMPLETENESS

With the following exception, the laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and anomalies were discussed in the case narrative.

SDG K1906902: One of the DDT and Endrin breakdown summaries and both tune summaries were missing from the data package for the pesticide analysis. The lab was contacted and provided the missing documentation.

EDD TO HARDCOPY VERIFICATION

All sample IDs and results reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Ten percent (10%) of the laboratory QC results were also verified.

TECHNICAL DATA VALIDATION

The QC requirements that were reviewed are listed below.

1	Sample Receipt, Preservation, and Holding Times	**1**	Reference Material
✓	Tune	✓	Matrix Spikes/Matrix Spike Duplicates (MS/MSD)
✓	Initial Calibration	**1**	Field Duplicates
✓	Continuing Calibration	✓	Target Analyte List
✓	Laboratory Blanks	✓	Reporting Limits
1	Field Blanks	✓	Reported Results
2	Labeled Compounds/ Surrogate Compounds	✓	Compound Identification
1	Internal Standards	✓	Calculation Verification (Full Validation only)
1	Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.
[1] Quality control results are discussed below, but no data were qualified.
[2] Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

The validation guidance documents state that the cooler temperatures should be within an advisory temperature range of 2° to 6°C. With the following exception noted below, the laboratory received the sample coolers within the advisory temperature range.

SDG K1906902: Two sample coolers were received with the temperature greater than the upper control limit at 6.1 °C and 6.2°C. This outlier did not impact data quality and no qualifiers were required.

Samples analyzed in this SDG were archived and frozen upon receipt; all analyses were completed within holding times.

SDG K1907934: Sample 712-82819 had a collection date on the chain-of-custody (COC) of 8/27/19, but the imbedded date segment "82819" suggests a collection date of 8/28/19. Sample H3-SC1B-30TO40-82919 had a collection date on the COC of 8/28/19, but the segment "82919" suggests an 8/29/19 collection date. The client was contacted and confirmed that the imbedded date segment is correct.

Field Blanks

Field blanks were evaluated for impact of any contaminant on the reported sample results. Action levels were established at five times (5x) the concentration reported in the field blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U-6). No action is taken if the sample result is greater than the action level, or for non-detected results.

SDG K1906902: No field blanks were submitted.

SDG K1907934: Samples 711-82719 and 712-82819 were submitted as field blanks. No target analytes were detected.

Labeled Compounds/Surrogate Compounds

Isotope-stable labeled compounds were added to each field and QC sample extract. Because they are added prior to extraction and are also used to quantitate the associated target compound analog, they act as internal standards as well as surrogate compounds. Based on the dual nature of the way the labeled compounds are used in this method, they have been evaluated using both internal standard and surrogate criteria.

The responses for the labeled compounds were evaluated using the typical internal standard acceptance limits of 50-200% of the response in the associated calibration verification standard. All positive results for associated target compounds in the following samples were qualified (J-19) due to labeled compound recoveries greater than the control limits:

SDG	Sample ID	Labeled Compound	Associated Analog Compound	Qualifier
K1906902	M4-0to26-101918	4,4'-DDD-d4	2,4'-DDE 4,4'-DDE 4,4'-DDD	J-19
	A4-0to25-100818 A3-0to31-100818 A2-0to26-100818 A6-0to23-100818 C4-0to27-100918 A7-0to26-100918 D2-0to19-101018 F2-0to19-101018 H2-0to30-101218 J2A3-0to18-101218 Q2-0to13-101218 G6-0to27-101818 T6-0to29-101618	4,4'-DDD-d4 4,4'-DDT-d4 Endrin-13C12	2,4'-DDE 4,4'-DDE 2,4'-DDD 4,4'-DDD 2,4'-DDT 4,4'-DDT	

The labeled compounds are added to the samples prior to extraction, so they function as indicators for extraction efficiency and matrix interference in addition to being used for target analyte quantitation. All labeled compound %R values were within the laboratory's surrogate control limits.

Internal Standards

The internal standard, pyrene-d10, was added to all samples as a quantitation reference for the isotope-labeled compounds. With the following exception, all internal standard responses were within the method specified control limits of 50%-200% of the response in the associated calibration verification standard.

SDG K1906902: The internal standard areas for all field samples were greater than the upper control limit. No qualification was applied as this internal standard compound is only used to quantitate the isotope-labeled compounds.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

Laboratory control/laboratory control duplicate samples (LCS/LCSD) were analyzed at the required frequency of one per batch of 20 or fewer samples. With the following exceptions, all spike recoveries were within the laboratory control limits.

SDG K1907934: For extraction batch 343719, the %R value for 4,4'-DDD was greater than the upper control limit but was in control in the associated LCSD sample; no data were qualified for a single outlier.

Reference Material

A reference material sample was not analyzed with this data set.

Matrix Spikes/Matrix Spike Duplicates

Matrix spikes were not analyzed with these data sets. Accuracy and precision were assessed using the Laboratory Control Sample/Laboratory Control Sample Duplicate.

Field Duplicates

For sediment samples, the RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL. No data were qualified based on field duplicate precision outliers. Users of the data should consider the impact of field precision outliers on the reported results.

SDG K1906902: Samples M4-0to26-101918 & 515-0to26-101918 were submitted as field duplicates. Field precision was acceptable.

SDG K1907934: Samples D6-SC1b-50to60-82619 & 411-50to60-82619, J3-SC1b-48to90-82719 & 413-SC1b-80to90-82719, and R4-SC1b-40to50-82819 & 413-SC1b-40to50-82819 were submitted as field duplicates. The difference value for 4,4'-DDE was greater than 2X the RL for Samples R4-SC1b-40to50-82819 & 413-SC1b-40to50-82819. All other RPD and difference values were within the control limits.

Calculation Verification

SDG K1906902: Calculation verifications were performed for this sample delivery group (SDG). No calculation or transcription errors were found.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory performed the specified analytical method. Accuracy was acceptable, as demonstrated by the surrogate, LCS/LCSD, and MS/MSD percent recoveries. Precision was also acceptable as demonstrated by the LCS/LCSD, MS/MSD, and field duplicate RPD values.

Data were qualified due to labeled compound response outliers.

All data, as qualified, are acceptable for use.

DATA VALIDATION REPORT
Pacific Groundwater Group: PH Head of Swan Island Sediments
PCB Aroclors by EPA 8082A

This report documents the review of analytical data from the analysis of sediment samples and the associated field and laboratory quality control (QC) samples. Samples were analyzed by Eurofins TestAmerica Laboratories, Inc., Tacoma, Washington. Refer to the Sample Index for a complete list of samples.

SDG	Number of Samples	Validation Level
J88125-1	21 Sediment	EPA Stage 2A EPA Stage 4 (batch 580-308212)

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs and results reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Ten percent (10%) of the laboratory QC results were also verified.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	✓	Laboratory Control Samples (LCS)
✓	Initial Calibration (ICAL)	1	Certified Reference Material
1	Continuing Calibration (CCAL)	1	Field Duplicates
✓	Laboratory Blanks	✓	Target Analyte List
1	Field Blanks	1	Reporting Limits
2	Surrogate Compounds	2	Compound Identification
✓	Internal Standards	✓	Reported Results
2	Matrix Spikes/Matrix Spike Duplicates (MS/MSD)	1	Calculation Verification (Full validation only)

1 Quality control results are discussed below, but no data were qualified.
2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

The validation guidance documents state that the cooler temperatures should be within an advisory temperature range of ≤6°C. With the following exception noted below, the laboratory received the sample coolers within the advisory temperature range.

All samples were archived and kept frozen until client requested analyses within 1 year.

Continuing Calibration

All continuing calibration (CCAL) percent difference (%D) values were within the ±20% control limit, with the exceptions noted below.

For the CCALs analyzed on 8/15/19 and 8/16/19, PCB-1016 exhibited a high bias on the DB-35ms column, but within the control limit on the DB-XLB column; no qualifiers were required.

Field Blanks

Field blanks were not submitted with this data set.

Surrogate Compounds

The surrogate compounds tetrachloro-m-xylene (TCMX) and decachlorobiphenyl (DCBP) were added to all samples. When a surrogate %R value is below the control limit and indicates a potential low bias, associated results are estimated (J/UJ-13L). When a surrogate %R value is greater than the control limit and indicates a potential high bias, only the positive results for a sample are estimated (J-13H). With the exceptions noted below, all surrogate spike recoveries were within the laboratory control limits.

Sample ID	DCBP %R	Action
F2-0to19-101018	37	J/UJ-13L
A2-0to26-100818	37	
A4-0to25-100818	32	
A6-0to23-100818	32	
A7-0to26-100918	31	
C4-0to27-100918	36	
D2-0to19-101018	37	

Matrix Spikes/Matrix Spike Duplicates

Matrix spike/matrix spike duplicate samples (MS/MSD) were analyzed at the appropriate frequency. No action is taken unless both the MS and MSD %R values are outside the control limits for MS/MSD %R outliers. Precision is indicated by the relative percent difference (RPD) between the MS and MSD values. Any RPD values outside the control limits indicate uncertainty in the measured results for the sample. Qualifiers were only issued to the parent sample.

When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-8). Only the associated positive results are estimated (J-8) if the %R values indicate a potential high bias. Associated positive results are estimated (J-9) if the RPD values indicate uncertainty.

Sample A1-0to30-102018 was analyzed as the MS/MSD sample. The MS %R value for Aroclor 1260 was greater than the upper control limit and the MSD %R value was less than the lower control limit; the associated results in the parent sample were estimated (J-8) without a bias indicator as the matrix

spike recoveries do not indicate a consistent bias. The RPD value was greater than the control limit; the result in the parent sample was estimated (J-9).

Certified Reference Material

No certified reference material was submitted.

Field Duplicates

For sediment samples, the RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL. No data were qualified based on field duplicate precision outliers. Users of the data should consider the impact of field precision outliers on the reported results.

Samples M4-0to26-101918 and 515-0to26-101918 were submitted as field duplicates. The RPD values for PCB-1254 and PCB-1260 were greater than the control limit at 177% and 146%, respectively.

Reporting Limits

Reporting limits were elevated due to required dilutions and/or percent moisture adjustment and were greater than the workplan specified limits.

Compound Identification

As required by the method, the laboratory analyzed any samples with positive detections on a confirmatory column. The results from the two analytical columns were compared for agreement. An elevated RPD value may indicate the presence of an interference resulting in a high bias. When the RPD value was greater than or equal to 40% but less than 60% the reported value was estimated (J-3). If the RPD value was greater than 60%, the result was qualified as a tentative identification (NJ-3). Confirmation outliers resulting in data qualification are discussed below.

For the following samples, the second column confirmation RPD values were greater than 40% and were qualified as estimated (J-3) or tentatively identified (NJ-3):

SDG	Sample ID	Compound	RPD	Qualifier
J88125-1	F2-0to19-101018	PCB-1254	55.0	J-3
	G6-0to27-101818	PCB-1260	45.2	J-3
	H2-0to30-101218	PCB-1260	46.8	J-3
	M4-0to26-101918	PCB-1260	70.8	NJ-3
	N7-0to27-101418	PCB-1260	63.1	NJ-3
	O7-0to27-101918	PCB-1254	57.0	J-3
	A2-0to26-100818	PCB-1260	48.5	J-3
	A4-0to25-100818	PCB-1254	41.4	J-3
	D2-0to19-101018	PCB-1260	56.6	J-3

Calculation Verification

Several results in batch 580-308212 of this SDG were verified by recalculation from the raw data. No calculation or transcription errors were found.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed the specified analytical method. With the exceptions noted above, accuracy was acceptable as demonstrated by the surrogate, LCS, and MS/MSD recoveries. With the exceptions noted above, precision was also acceptable as demonstrated by the MS/MSD and field duplicate RPD values.

Data were estimated due to surrogate and matrix spike accuracy outliers, a matrix spike precision outlier, and dual column confirmation RPD outliers.

All data, as qualified, are acceptable for use.

DATA VALIDATION REPORT
Pacific Groundwater Group: PH Head of Swan Island Sediments
Diesel Range Organics - Method NWTPH-Dx

This report documents the review of analytical data from the analyses of sediment samples and the associated laboratory and field quality control (QC) samples. Samples were analyzed by Eurofins TestAmerica, Tacoma, Washington. Refer to the Sample Index for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
J88125-1	21 Sediment	EPA Stage 2A & Stage 4 (batch 580-308116)

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs and results reported in the electronic data deliverable (EDD) were verified (10% verification) by comparing the EDD to the laboratory data package.

TECHNICAL DATA VALIDATION

The QC requirements that were reviewed are listed below.

1	Sample Preservation and Holding Times	✓	Laboratory Control Samples (LCS)
✓	INITIAL CALIBRATION (ICAL)	✓	Matrix Spikes/Matrix Spike Duplicates
✓	CONTINUING CALIBRATION (CCAL)	✓	Laboratory Duplicates
✓	Laboratory Blanks	1	Field Duplicates
1	Field Blanks	1	Reporting Limits
2	Surrogate Compounds	✓	Reported Results

✓ *Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed*
1 *Quality control outliers are discussed below, but no data were qualified.*
2 *Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.*

Sample Receipt, Preservation, and Holding Times

The validation guidance documents state that the cooler temperatures should be within an advisory temperature range of ≤6°C. The laboratory received the sample coolers within the advisory temperature range.

SDG J88125-1: All samples were archived and kept frozen until client requested analyses within 1 year.

Field Blanks

No field blanks were submitted with this sampling event.

Surrogate Compounds

The surrogate compound, o-terphenyl, was added to all field and batch QC samples. When a surrogate %R value is below the control limit and indicates a potential low bias, associated results are estimated (J/UJ-13L). When a surrogate %R value is greater than the control limit and indicates a potential high bias, only the positive results for a sample are estimated (J-13H). With the exceptions noted below, all surrogate spike recoveries were within the laboratory control limits.

The o-terphenyl recoveries for Samples J2A3-0to18-101218 and A6-0to23-100818 were less than the lower control limit; associated sample results were estimated (J/UJ-13L).

Field Duplicates

For sediment samples, the FSP RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL. No data were qualified based on field duplicate precision outliers. Users of the data should consider the impact of field precision outliers on the reported results.

Samples M4-0to26-101918 and 515-0to26-101918 were submitted as field duplicates. Field precision was acceptable.

Reporting Limits

The target reporting limits for samples were adjusted for sample size and required dilutions. No data were qualified.

Reported Results

No anomalies were noted during validation for evaluated results.

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory followed the specified analytical method. With the exceptions noted above, accuracy was acceptable, as demonstrated by the surrogate, LCS/LCSD, and MS/MSD percent recovery values. Precision was also acceptable as demonstrated by the LCS/LCSD, MS/MSD, and laboratory and field duplicate relative percent difference values.

Results were estimated based on surrogate recovery outliers.

All data, as qualified, are acceptable for use.

DATA VALIDATION REPORT
Pacific Groundwater Group: PH Head of Swan Island Sediments
Dioxin/Furan Compounds by EPA 1613B

This report documents the review of analytical data from the analysis of sediment samples and the associated field and laboratory quality control (QC) samples. Samples were analyzed by TestAmerica Laboratories, Inc., Sacramento, California. Refer to the Sample Index for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
J88125-1	21 Sediment	EPA Stage 2A & Stage 4 (batch 320-315077)

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative. The laboratory reported more analytes in the report and the EDD than were requested. The laboratory resubmitted the reports and EDD files with the extra results removed.

EDD TO HARDCOPY VERIFICATION

All sample IDs and results reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Ten percent (10%) of the laboratory QC results were also verified.

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	2	Certified Reference Material
✓	System Performance and Resolution Checks	1	Field Duplicates
✓	Initial Calibration (ICAL)	✓	Target Analyte List
✓	Calibration Verification (CVER)	✓	Reporting Limits
1	Laboratory Blanks	2	Compound Identification
1	Field Blanks	2	Compound Quantitation
✓	Labeled Compound Recovery	✓	Reported Results
1	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	1	Calculation Verification (Full Validation Only)
✓	Ongoing Precision and Recovery (OPR)		

✓Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.
1 Quality control results are discussed below, but no data were qualified.
2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

The validation guidance documents state that the cooler temperatures should be within an advisory temperature range of ≤6°C. With the following exception noted below, the laboratory received the sample coolers within the advisory temperature range.

SDG J88125-1: All samples were archived and kept frozen until client requested analyses within 1 year.

Laboratory Blanks

To assess the impact of any blank contaminant (excluding homologs) on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U-7). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned EMPC-flags to values when a peak was detected but did not meet identification criteria. These values cannot be considered as positive identifications but are "estimated maximum possible concentrations". When these occurred in the method blank the results were considered as false positives. No action levels were established for these analytes.

Method blanks were analyzed at the appropriate frequency. Contaminant levels, associated samples, and action levels are documented in the data validation worksheets.

SDG J88125-2: OCDD detected was detected in both method blanks; the associated sample results were greater than the 5x action level; no qualification was required.

Field Blanks

No field blanks were submitted.

Matrix Spike/Matrix Spike Duplicate

Matrix spike/matrix spike duplicate (MS/MSD) analyses were not performed. Accuracy was assessed using labeled compound recoveries and laboratory control samples. This QC sample goes through the entire extraction process prior to analysis. Precision is evaluated using the field duplicate analyses.

Certified Reference Material

The laboratory extracted and analyzed Clean Soil Reference Material (EDF-5183). The criterion for CRM recovery is that the reported result is within ±2x the standard deviation of the true value for analytes with reference concentrations greater than five times the detection limit. The acceptance criteria were not applied to results for 2,3,4,7,8-PeCDF, 2,3,7,8-TCDD, 1,2,3,7,8-PeCDD, and 1,2,3,7,8-PeCDF because the certified values were less than five times (5x) the detection limit.

SDG J88125-1: For extraction batch 320-315077, 1,2,3,4,6,7,8-HpCDF and 1,2,3,6,7,8-HxCDD recovered less than the lower control limits; associated sample results were estimated (J/UJ-12L).

For extraction batch 320-315080, 1,2,3,6,7,8-HxCDD recovered less than the lower control limit; associated sample results were estimated (J-12L).

Field Duplicates

For sediment samples, the FSP RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL. No data were qualified based on field duplicate precision outliers. Users of the data should consider the impact of field precision outliers on the reported results.

Samples M4-0to26-101918 and 515-0to26-101918 were submitted as field duplicates. The difference value for 1,2,3,7,8-PeCDF was greater than 2x the RL.

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF detects using an alternate GC column, however this compound was not an analyte of interest for this event, therefore confirmation was not required.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentration" values for one or more of the target analytes. An EMPC value is reported when a peak was detected but did not meet identification criteria, as required by the method; therefore, the result cannot be considered as a positive identification for the analyte. To indicate that the reported result for an individual analyte is in effect an elevated detection limit, the EMPC values were qualified as not detected (U-25) for all compound results below the reporting limit and were estimated (J-25) for all compound results greater than the reporting limit.

Compound Quantitation

SDG J88125-1: The results for OCDD in thirteen samples exceeded the linear calibrated range of the instrument and were flagged "E" by the laboratory. These results were estimated (J-20).

Calculation Verification

Calculation verifications were performed for batch 320-315077. No calculation or transcription errors were found.

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed the specified analytical method. With the exceptions noted previously, accuracy was acceptable, as demonstrated by the labeled compound, CRM, and OPR recoveries. Precision was also acceptable as indicated by the field duplicate samples.

Results were estimated due to reference material recovery outliers and calibration range exceedances. Data were qualified as not detected or estimated to indicate that EMPC values represent elevated detection limits.

All data, as qualified, are acceptable for use.

DATA VALIDATION REPORT
Pacific Groundwater Group: PH Head of Swan Island Sediments
Dioxin/Furan Compounds by EPA 1613B

This report documents the review of analytical data from the analysis of solid samples and the associated laboratory quality control (QC) samples. Samples were analyzed by Cape Fear Analytical, Wilmington, North Carolina. Refer to the Sample Index for a complete list of samples.

SDG	Number of Samples	Validation Level
15468	14 Solid	Stage 4
15469	19 Solid	Stage 2A
15470	21 Solid	Stage 2A
15471	11 Solid & 2 Field Blank	Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and anomalies were discussed in the case narrative. The laboratory reported more analytes in the report and the EDD than were requested. The laboratory resubmitted the reports and EDD files with the extra results removed.

EDD TO HARDCOPY VERIFICATION

All sample IDs and results reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Ten percent (10%) of the laboratory QC results were also verified.

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	1	Certified Reference Material
✓	System Performance and Resolution Checks	1	Field Duplicates
✓	Initial Calibration (ICAL)	✓	Target Analyte List
✓	Calibration Verification (CVER)	✓	Reporting Limits
2	Laboratory Blanks	2	Compound Identification
1	Field Blanks	2	Compound Quantitation
✓	Labeled Compound Recovery	✓	Reported Results
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	1	Calculation Verification (Full Validation Only)
✓	Ongoing Precision and Recovery (OPR)		

✓Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.
1 Quality control results are discussed below, but no data were qualified.
2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

SDG 15471: Sample 712-82819 has a collection date of 8/27/19 as listed on the chain-of-custody (COC), but the identification (ID) segment indicates a date of 8/28/19. The client was contacted and verified the 8/28/19 date was correct.

Laboratory Blanks

To assess the impact of any blank contaminant (excluding homologs) on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U-7). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned EMPC-flags to values when a peak was detected but did not meet identification criteria. These values cannot be considered as positive identifications but are "estimated maximum possible concentrations". When these occurred in the method blank the results were considered as false positives. No action levels were established for these analytes.

Method blanks were analyzed at the appropriate frequency. Contaminant levels, associated samples, and action levels are documented in the data validation worksheets.

SDG 15468, 15470: For extraction batch, 41713, 1,2,3,4,6,7,8-HpCDF and 1,2,3,7,8-PeCDF were detected; the associated sample results less than the 5x action level were qualified as not detected (U-7) at the reported concentrations.

SDG 15469: For extraction batch, 41747, the following analytes were detected; the associated sample results less than the 5x action level were qualified as not detected (U-7) at the reported concentrations.

1,2,3,4,6,7,8,9-OCDF	1,2,3,4,7,8,9-HpCDF	1,2,3,4,6,7,8-HpCDF	1,2,3,7,8,9-HxCDF
2,3,4,6,7,8-HxCDF	1,2,3,6,7,8-HxCDF	2,3,4,7,8-PeCDF	2,3,7,8-TCDF
1,2,3,4,6,7,8,9-OCDD	1,2,3,4,6,7,8-HpCDD	1,2,3,7,8,9-HxCDD	1,2,3,6,7,8-HxCDD

SDG 15470: For extraction batch, 41778, 1,2,3,7,8,9-HxCDF, 1,2,3,4,7,8-HxCDF, 1,2,3,7,8-PeCDF, 2,3,7,8-TCDF, and 1,2,3,4,6,7,8,9-OCDD were detected; the associated sample results less than the 5x action level were qualified as not detected (U-7) at the reported concentrations.

SDG 15471: For extraction batch, 41761, the following analytes were detected; the associated sample results less than the 5x action level were qualified as not detected (U-7) at the reported concentrations.

1,2,3,4,7,8,9-HpCDF	1,2,3,4,6,7,8-HpCDF	1,2,3,7,8,9-HxCDF	2,3,4,6,7,8-HxCDF
1,2,3,6,7,8-HxCDF	1,2,3,4,7,8-HxCDF	1,2,3,4,6,7,8,9-OCDD	1,2,3,4,6,7,8-HpCDD
1,2,3,7,8,9-HxCDD	1,2,3,7,8-PeCDD		

Field Blanks

SDG 15471: Samples 711-82719 and 712-82819 were submitted as field blanks. After evaluation of method blank contamination and EMPC results, no positive results remained.

Matrix Spike/Matrix Spike Duplicate

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. No action is taken unless both the MS and MSD %R values are outside the control limits for MS/MSD %R outliers. When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-8L). Only the associated positive results are estimated (J-8H) if the %R values indicate a potential high bias. Precision is evaluated using the relative percent difference (RPD) values calculated between the MS and MSD results. Any RPD values outside the control limits indicate uncertainty in the measured results for the sample. Associated positive results are estimated (J-9) when the RPD values indicate uncertainty. Qualifiers were only issued to the parent sample.

SDG 15468: Sample R4-SC1b-20to30-82819 was analyzed as the matrix spike/matrix spike duplicate (MS/MSD) sample. The MS %R value for 1,2,3,4,6,7,8,9-OCDD was greater than the upper control limit but was less than the lower control limit in the associated MSD sample; associated sample results were estimated (J-8). The RPD values for 1,2,3,4,6,7,8,9-OCDD and 1,2,3,4,6,7,8-HpCDD were greater than the control limit; associated results in the parent sample were estimated (J-9).

SDG 15469: Sample J6-SC1b-20to30-82819 was analyzed as the MS/MSD sample. The MS %R value for 1,2,3,4,6,7,8-HpCDD was greater than the upper control limit but was less than the lower control limit in the associated MSD sample; associated sample results were estimated (J-8). The RPD value for this compound was greater than the control limit; the associated result in the parent sample was estimated (J-9).

SDG 15471: Sample J5-SC1b-20to30-82719 was analyzed as the MS/MSD sample. The RPD values for 1,2,3,4,6,7,8,9-OCDD, 1,2,3,4,6,7,8,9-OCDF, 1,2,3,4,6,7,8-HpCDD, 1,2,3,4,6,7,8-HpCDF, and 1,2,3,6,7,8-HxCDD were greater than the control limit; the associated results in the parent sample were estimated (J-9).

Certified Reference Material

The laboratory extracted and analyzed Clean Soil Reference Material (EDF-5183). The criterion for CRM recovery is that the reported result is within ±2x the standard deviation of the true value for analytes with reference concentrations greater than five times the detection limit. The acceptance criteria were only applied to results for 1,2,3,4,6,7,8-HpCDD, 1,2,3,4,6,7,8,9-OCDD, 1,2,3,4,6,7,8-HpCDF, 1,2,3,4,6,7,8,9-OCDF, total HxCDD, total HpCDD, and total HpCDF because the certified values were greater than five times (5x) the detection limit.

SDG 15468, 15470, 15471: All acceptance criteria were met.

Field Duplicates

For sediment samples, the FSP RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL. No data were qualified based on field duplicate precision outliers. Users of the data should consider the impact of field precision outliers on the reported results.

The following compounds exceeded acceptance criteria:

SDG	Parent & Duplicate Sample IDs	Analyte	Outlier Type
15468	R4-SC1b-40to50-82819 & 413-SC1b-40to50-82819	1,2,3,4,6,7,8,9-OCDD	137% RPD
		1,2,3,4,6,7,8,9-OCDF	Diff >2x RL
		1,2,3,4,6,7,8-HpCDD	140% RPD
		1,2,3,4,6,7,8-HpCDF	Diff >2x RL
		Total HpCDF	141% RPD
		Total HpCDD	139% RPD
		Total HxCDF	Diff >2x RL
		Total HxCDD	Diff >2x RL
		Total PeCDF	Diff >2x RL
		Total TeCDF	Diff >2x RL
		Total TeCDD	Diff >2x RL
15470	D6-SC1b-50to60-82619 & 411-SC1b-50to60-82619	1,2,3,4,6,7,8-HpCDD	68% RPD
		1,2,3,4,6,7,8-HpCDF	Diff >2x RL
		1,2,3,4,6,7,8,9-OCDF	65% RPD
		1,2,3,4,6,7,8,9-OCDD	64% RPD
		Total HpCDF	66% RPD
		Total HxCDF	Diff >2x RL
		Total HpCDD	66% RPD
		Total HxCDD	Diff >2x RL
		Total PeCDF	Diff >2x RL
		Total TeCDF	Diff >2x RL
	J3-SC1b-80to90-82719 & 412-SC1b-80to90-82719	1,2,3,4,6,7,8,9-OCDD	70% RPD
		1,2,3,4,6,7,8-HpCDF	58% RPD
		Total HpCDD	60% RPD
		Total HpCDF	58% RPD

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF detects using an alternate GC column. The DB5 column that is typically used cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. The laboratory performed a second column confirmation for all samples with detections greater than the reporting limit on a DB225 column. All 2,3,7,8-TCDF results reported from the DB5 column were qualified as do-not-report (DNR-11) in favor of the DB225 results.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentration" values for one or more of the target analytes. An EMPC value is reported when a peak was detected

but did not meet identification criteria, as required by the method; therefore, the result cannot be considered as a positive identification for the analyte. To indicate that the reported result for an individual analyte is in effect an elevated detection limit, the EMPC values were qualified as not detected (U-25) for all compound results below the reporting limit and were estimated (J-25) for all compound results greater than the reporting limit.

Compound Quantitation

SDG 15469: The result for OCDD in Sample H3-SC1b-110to120-82819 exceeded the linear calibrated range of the instrument and was flagged "E" by the laboratory. This result was estimated (J-20).

SDG 15470: The result for OCDD in Sample D6-SC1b-20to30-82619 exceeded the linear calibrated range of the instrument and was flagged "E" by the laboratory. This result was estimated (J-20).

Calculation Verification

SDGs 15468: Calculation verifications were performed. No calculation or transcription errors were found.

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed the specified analytical method. With the exceptions noted above, accuracy was acceptable, as demonstrated by the labeled compound, OPR, and MS/MSD recoveries. With the exceptions noted above, precision was also acceptable as indicated by the MS/MSD and field duplicate RPD values.

Data were qualified as not detected at the reported concentrations due to method blank contamination. Results were estimated due to MS/MSD recovery and precision outliers. Data were qualified as not detected or estimated to indicate that EMPC values represent elevated detection limits.

Data were flagged as do-not-report due to indicate which result from multiple reported results not to use. Data flagged as do-not-report should not be used for any reason.

All other data, as qualified, are acceptable for use.

DATA VALIDATION REPORT
Pacific Groundwater Group: PH Head of Swan Island Sediments
PCB Congeners by EPA 1668A

This report documents the review of analytical data from the analysis of sediment samples and the associated field and laboratory quality control (QC) samples. Samples were analyzed by Eurofins TestAmerica Laboratories, Inc., Knoxville, Tennessee. Refer to the Sample Index for a complete list of samples.

SDG	Number of Samples	Validation Level
J88125-2	21 Sediment	EPA Stage 2A & EPA Stage 4 (batch 140-32775)
J88908-1	11 Sediment & 1 Field Blank	EPA Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs and results reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Ten percent (10%) of the laboratory QC results were also verified.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	1	Certified Reference Material
✓	Initial Calibration (ICAL)	1	Field Duplicates
✓	Calibration Verification (CVER)	✓	Target Analyte List
2	Laboratory Blanks	✓	Reporting Limits
1	Field Blanks	2	Compound Identification
✓	Labeled Compound Recovery	2	Compound Quantitation
1	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	2	Reported Results
✓	Ongoing Precision and Recovery (OPR)	1	Calculation Verification (Full Validation Only)

1 Quality control results are discussed below, but no data were qualified.
2 Quality control outliers that impact the reported data were noted.
Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

The validation guidance documents state that the cooler temperatures should be within an advisory temperature range of ≤6°C. The laboratory received the sample coolers within the advisory temperature range.

SDG J88125-1: All samples were archived and kept frozen until client requested analyses within 1 year.

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U-7). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned EMPC-flags to values when a peak was detected but did not meet identification criteria. These values cannot be considered as positive identifications but are "estimated maximum possible concentrations". When these occurred in the method blank the results were considered as false positives. No action levels were established for these analytes.

SDG J88125-2: For extraction batch, 140-32775, although fifty-one (51) compounds were detected (excluding homologs and EMPC qualified results) in the laboratory method blank, only nineteen (19) results in the associated samples were less than the action levels and were qualified as not detected (U-7) at the reported concentrations.

For extraction batch, 140-32817, fifty-six (56) compounds were detected (excluding homologs and EMPC qualified results) in the laboratory method blank; seven (7) results in the associated samples less than the action levels were qualified as not detected (U-7) at the reported concentrations.

SDG J88908-1: For extraction batch, 140-33603, although sixty-five (65) compounds were detected (excluding homologs and EMPC qualified results) in the laboratory method blank, only thirty-three (33) results in the associated samples were less than the action levels and were qualified as not detected (U-7) at the reported concentrations.

For extraction batch, 140-34150, although forty-four (44) compounds were detected (excluding homologs and EMPC qualified results) in the laboratory method blank, only one (1) result in the associated samples was less than the action level and was qualified as not detected (U-7) at the reported concentration.

For extraction batch, 140-33628, although thirteen (13) compounds were detected (excluding homologs and EMPC qualified results) in the laboratory method blank, no results in the associated samples were less than the action levels; no data were qualified.

Field Blanks

Field blank action levels were established at five times (5x) the concentration reported in the field blank. Following evaluation for laboratory blank contamination, if a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U-6). No action is taken if the sample result is greater than the action level, or for non-detected results.

SDG J88908-1: Sample 711-82719 was submitted as a field blank. Forty-eight (48) compounds were detected (excluding homologs and EMPC qualified results). After evaluation of method blank contamination, twelve (12) results in the associated samples were less than the action levels and were qualified as not detected (U-6) at the reported concentrations.

Matrix Spikes/Matrix Spike Duplicates

Matrix spike/matrix spike duplicates (MS/MSD) were not analyzed. Accuracy was assessed using labeled compound recoveries and the ongoing precision and recovery (OPR) sample.

Certified Reference Material

No certified reference materials were submitted.

Field Duplicates

For sediment samples, the project workplan RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL. No data were qualified based on field duplicate precision outliers. Users of the data should consider the impact of field precision outliers on the reported results.

With the following exceptions, the field duplicates were within the control limits:

SDG	Parent Sample	Duplicate Sample	Compound	Evaluation
J88125-2	M4-0to26-101918	515-0to26-101918	PCB-5	75% RPD

Compound Identification

For several samples, the laboratory reported EMPC or "estimated maximum possible concentration" values for one or more of the target analytes. An EMPC value is reported when a peak was detected but did not meet identification criteria, as required by the method; therefore, the result cannot be considered as a positive identification for the analyte. To indicate that the reported result for an individual analyte is in effect an elevated detection limit, the EMPC values were qualified as not detected (U-25) for all compound results below the reporting limit and were estimated (J-25) for all compound results greater than the reporting limit.

Compound Quantitation

All SDGs: The laboratory case narrative indicated that several results were flagged "G" to indicate elevated instrument noise and/or matrix interferences; associated "G" flagged results were estimated (J/UJ-14) to indicate a potential bias and an elevated reporting limit.

SDG J88125-2: Several results for Sample A6-0to23-100818 were flagged "S" to indicate ion suppression. Ion abundance ratios and retention times were within acceptance criteria; therefore, no qualification was applied.

Reported Results

SDG J88908-1: The laboratory re-extracted and re-analyzed all the samples in batch 140-33628 because the method blank and laboratory control sample were analyzed at a 5x dilution due to matrix interferences which prevented the instrumentation from locking. All samples in this batch have been flagged as do-not-report (DNR-11) to indicate which result of multiple reported results not to use.

Calculation Verification

SDG J88125-2: Several results were recalculated for batch 140-32775 in this SDG. No transcription or calculation errors were found.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory performed the specified analytical method. With the exceptions noted above, accuracy was acceptable as demonstrated by the labeled compound and laboratory control sample recoveries and precision was acceptable as demonstrated by the field duplicate RPD values.

Results were flagged as not detected at the reported concentrations based on method blank and field blank contamination. Data were estimated or flagged as not detected to indicate that EMPC values represent elevated detection limits. Results were estimated due to matrix interferences and elevated instrument noise.

Results have been flagged as do-not-report (DNR) to indicate which result of multiple reported results not to use. Results flagged as DNR should not be used for any purpose.

All other data, as qualified, are acceptable for use.

DATA VALIDATION REPORT
Pacific Groundwater Group: PH Head of Swan Island Sediments
Metals by SW6020B and Mercury by SW7471A

This report documents the review of analytical data from the analysis of sediment samples and the associated laboratory and field quality control (QC) samples. Samples were analyzed by Eurofins TestAmerica Laboratories, Inc., Tacoma, Washington. Refer to the Sample Index for a complete list of samples.

SDG	Number of Samples and Matrix	Validation Level
J88125-1	21 Sediment	EPA Stage 3 & EPA Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs and results reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Ten percent (10%) of the laboratory QC results were also verified.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

2	Sample Receipt, Preservation, and Holding Times	2	Matrix Spikes (MS) and Matrix Spike Duplicates (MSD)
✓	Initial Calibration	✓	Laboratory Duplicates
✓	Calibration Verification	1	Field Duplicates
2	Laboratory Blanks	✓	Reporting Limits
1	Field Blanks	✓	Reported Results
1	Reference Materials	1	Calculation Verification (Full validation only)
✓	Laboratory Control Samples (LCS)		

✓Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.
1 Quality control results are discussed below, but no data were qualified.
2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

The validation guidance documents state that the cooler temperatures should be within an advisory temperature range of ≤6°C. With the following exception noted below, the laboratory received the sample coolers within the advisory temperature range.

All samples were archived and kept frozen until client requested analyses within 1 year. The holding time for mercury is 28 days for frozen samples, all samples in this SDG were analyzed past the holding at 298 to 310 days; all results were estimated (J-1).

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U-7). No action is taken if the sample result is greater than the action level, or for non-detected results.

Laboratory blanks were analyzed at the appropriate frequency. Contaminant levels, associated samples, and action levels are documented in the data validation worksheets.

For digestion batch, 580-308354, the method blank had a detected value for lead. The associated sample results were greater than the 5x action level; no data were qualified.

For the analyses on 8/13/19 and 8/14/19, instrument blanks had detected value for copper and lead, respectively. The associated sample results were greater than the 5x action level; no data were qualified.

Field Blanks

Field blanks were not submitted with this dataset.

Reference Materials

No certified reference materials were submitted.

Matrix Spike/Matrix Spike Duplicate

Matrix spike/matrix spike duplicate samples (MS/MSD) were analyzed at the proper frequency of one per 20 samples or one per batch for soil samples. Where analyte concentrations were less than 4x the spike amount, the percent recovery (%R) and relative percent difference (RPD) values were evaluated. If the percent recovery values indicate a potential low bias, associated results are estimated (J/UJ-8). If the %R values indicate a potential high bias, only the associated positive results are estimated (J-8).

For %R values less than 30%, indicating an extreme low bias, the results for the post digestion spike (PDS) were also evaluated. If the post spike %R values were acceptable, then associated results were estimated (J/UJ-8). If the post spike %R value was also less than the control limits of 75%-125%, the positive results were estimated (J/UJ-8) and the non-detects were rejected (R-8). If the PDS %R values were greater than the control limit, then associated positive results were estimated (J-8) and if the PDS %R was less than the control limit, associated results were estimated (J-8) without an indication of bias. For cases indicating conflicting bias because multiple matrix spike samples were included in a batch, only the parent sample was qualified with a bias indication.

Precision is indicated by the relative percent difference (RPD) between the MS and MSD values. RPD values outside the control limits indicate uncertainty in the measured results for the sample and positive results are estimated (J-9). Qualifiers were issued to all samples associated with a QC batch.

Sample A1-0to30-102018 was analyzed as the matrix spike for the mercury analyses. The MS/MSD recoveries were greater than the upper control limit at 124% and 121%; associated mercury results were estimated (J-8H) to indicate a potential high bias.

Field Duplicate

For sediment samples, the RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL. No data were qualified based on field duplicate precision outliers. Users of the data should consider the impact of field precision outliers on the reported results.

Samples M4-0to26-101918 and 515-0to26-101918 were submitted as field duplicates. The RPD value for mercury was greater than the control limit at 104%.

Calculation Verification

Several results were verified by recalculation from the raw data. No calculation or transcription errors were found.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed the specified analytical methods. Accuracy was acceptable, as demonstrated by the laboratory control sample and matrix spike recoveries. Precision was also acceptable as demonstrated by the laboratory and field duplicate RPD values.

Results were estimated based on holding time outliers and matrix spike recovery outliers.

All data, as qualified, are acceptable for use.

DATA VALIDATION REPORT
Pacific Groundwater Group: PH Head of Swan Island Sediments
Conventional Tests

This report documents the review of analytical data from the analysis of sediment samples and the associated laboratory and field quality control (QC) samples. Samples were analyzed by TestAmerica Laboratories, Inc., Tacoma, Washington. Refer to the Sample Index for a complete list of samples.

SDG	Number of Samples and Matrix	Validation Level
J88125-1	21 Sediment	EPA Stage 2A & EPA Stage 3 (batches 580-308264, 580-307638, 140-32648, 580-308680)

The analytical tests that were performed are summarized below:

Parameter	Method
Total Solids	ASTM D2216
Grainsize	ASTM D422
Total Organic Carbon (TOC)	EPA 9060
Density/Specific Gravity	D854

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs and results reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Ten percent (10%) of the laboratory QC results were also verified.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	✓	Matrix Spikes (MS) and Matrix Spike Duplicates (MSD)
✓	Initial Calibration	✓	Laboratory Duplicates
✓	Calibration Verification	1	Field Duplicates
1	Laboratory Blanks	✓	Reporting Limits
1	Field Blanks	✓	Reported Results
1	Reference Materials	1	Calculation Verification (Full validation only)
✓	Laboratory Control Samples (LCS)		

✓Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.
1 Quality control results are discussed below, but no data were qualified.
2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

The validation guidance documents state that the cooler temperatures should be within an advisory temperature range of ≤6°C. With the following exception noted below, the laboratory received the sample coolers within the advisory temperature range.

All samples were archived and kept frozen until client requested analyses within 1 year.

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U-7). No action is taken if the sample result is greater than the action level, or for non-detected results.

Laboratory blanks were analyzed at the appropriate frequency. Contaminant levels, associated samples, and action levels are documented in the data validation worksheets.

The method blank for batch 580-308680, had a detected value for total organic carbon; the associated sample results were greater than the 5x action level; no data were qualified.

Several instrument blanks analyzed on 8/18/19 had detected values for total organic carbon, however, all associated sample results were greater than the 5x action level; no data were qualified.

Field Blanks

Field blanks were not submitted with this dataset.

Reference Materials

No certified reference materials were submitted.

Field Duplicate

For sediment samples, the RPD control limit is 50% for results greater than 5x the reporting limit (RL) for TOC and solids and particle size percentages greater than 5% for grain size. For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL. No data were qualified based on field duplicate precision outliers. Users of the data should consider the impact of field precision outliers on the reported results.

Samples M4-0to26-101918 and 515-0to26-101918 were submitted as field duplicates. Field precision was acceptable.

Calculation Verification

Several results were verified by recalculation from the raw data. No calculation or transcription errors were found.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed the specified analytical methods. Accuracy was acceptable, as demonstrated by the laboratory control sample and matrix spike recoveries. Precision was also acceptable as demonstrated by the laboratory and field duplicate RPD values.

No data were qualified for any reason.

All data, as reported, are acceptable for use.

ECOCHEM
Data Quality

APPENDIX A

DATA QUALIFIER DEFINITIONS
REASON CODES
AND CRITERIA TABLES

DATA VALIDATION QUALIFIER CODES
Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

DATA QUALIFIER REASON CODES

Group	Code	Reason for Qualification
Sample Handling	1	Improper Sample Handling or Sample Preservation (i.e., headspace, cooler temperature, pH, summa canister pressure); Exceeded Holding Times
Instrument Performance	24	Instrument Performance (i.e., tune, resolution, retention time window, endrin breakdown, lock-mass)
	5A	Initial Calibration (RF, %RSD, r^2)
	5B	Calibration Verification (CCV, CCAL; RF, %D, %R) Use bias flags (H,L)[1] where appropriate
	5C	Initial Calibration Verification (ICV %D, %R) Use bias flags (H,L)[1] where appropriate
Blank Contamination	6	Field Blank Contamination (Equipment Rinsate, Trip Blank, etc.)
	7	Lab Blank Contamination (i.e., method blank, instrument blank, etc.) Use low bias flag (L)[1] for negative instrument blanks
Precision and Accuracy	8	Matrix Spike (MS and/or MSD) Recoveries Use bias flags (H,L)[1] where appropriate
	9	Precision (all replicates: LCS/LCSD, MS/MSD, Lab Replicate, Field Replicate)
	10	Laboratory Control Sample Recoveries (a.k.a. Blank Spikes) Use bias flags (H,L)[1] where appropriate
	12	Reference Material Use bias flags (H,L)[1] where appropriate
	13	Surrogate Spike Recoveries (a.k.a. labeled compounds, recovery standards) Use bias flags (H,L)[1] where appropriate
Interferences	16	ICP/ICP-MS Serial Dilution Percent Difference
	17	ICP/ICP-MS Interference Check Standard Recovery Use bias flags (H,L)[1] where appropriate
	19	Internal Standard Performance (i.e., area, retention time, recovery)
	22	Elevated Detection Limit due to Interference (i.e., chemical and/or matrix)
	23	Bias from Matrix Interference (i.e. diphenyl ether, PCB/pesticides)
Identification and Quantitation	2	Chromatographic pattern in sample does not match pattern of calibration standard
	3	2nd column confirmation (RPD or %D)
	4	Tentatively Identified Compound (TIC) (associated with NJ only)
	20	Calibration Range or Linear Range Exceeded
	25	Compound Identification (i.e., ion ratio, retention time, relative abundance, etc.)
Miscellaneous	11	A more appropriate result is reported (multiple reported analyses i.e., dilutions, re-extractions, etc. Associated with "R" and "DNR" only)
	14	Other (See DV report for details)
	26	Method QC information not provided

[1] H = high bias indicated
L = low bias indicated

Semivolatile Organic Compounds by Gas Chromatography-Mass Spectroscopy (GC-MS)

Dioxin/Furan Analysis by HRMS
(Based on Dioxin NFG 2011 and Methods EPA 1613B and SW-846 8290)

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Compound ID and Calculation					
Quantitation/ Identification	All ions for each isomer must maximize within ± 2 seconds. S/N ratio >2.5 Ion ratios must meet criteria listed in Table 8 Method 8290, or Table 9 of 1613B; RRTs w/in limits in Table 2 of 1613B	NFG [1] Method [2]	Narrate in report; qualify if necessary NJ(pos) for retention time outliers. U(pos) for ion ratio outliers.	25	**EcoChem PJ, see TM-05**
EMPC (estimated maximum possible concentration)	If quantitation identification criteria are not met, laboratory should report an EMPC value.	NFG [1] Method [2]	If laboratory correctly reported an EMPC value, qualify the native compound U(pos) to indicate that the value is a detection limit and qualify total homolog groups J (pos)	25	**Use professional judgment See TM-18**
Interferences	Interferences from chlorodiphenyl ether compounds	NFG [1] Method [2]	J(pos)/UJ(ND) if present	23	**See TM-16**
	Lock masses must not deviate ± 20% from values in Table 8 of 1613B	Method [2]	J(pos)/UJ(ND) if present	24	**See TM-17**
Second Column Confirmation	All 2,3,7,8-TCDF hits must be confirmed on a DB-225 (or equiv) column. All QC criteria must also be met for the confirmation analysis.	NFG [1] Method [2]	Report the DB-225 value. If not performed use PJ.	3	DNR-11 DB5 result if both results from both columns are reported. **EcoChem PJ, see TM-05**
Calculation Check	Check 10% of field & QC sample results	EcoChem standard policy	Contact laboratory for resolution and/or corrective action	na	Full data validation only.
Electronic Data Deliverable (EDD)					
Verification of EDD to hardcopy data	EcoChem verify @ 10% unless problems noted; then increase level up to 100% for next several packages.		Depending on scope of problem, correct at EcoChem (minor issues) to resubmittal by laboratory (major issues).	na	EcoChem Project Manager and/or Database Administrator will work with lab to provide long-term corrective action.
Dilutions, Re-extractions and/or Reanalyses	Report only one result per analyte	Standard reporting policy	Use "DNR" to flag results that will not be reported.	11	

(pos) - positive (detected) results; (ND) - not detected results

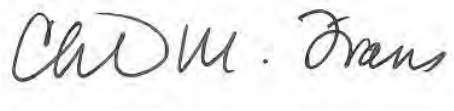
DATA VALIDATION REPORT
Portland Harbor
Swan Island Lagoon Phases 1b & 2
ARI PCB Results

Prepared for:

Pacific Groundwater Group
2377 Eastlake Avenue East, Suite 200
Seattle, Washington 98102



Prepared by:

EcoChem, Inc.
500 Union Street, Suite 1010
Seattle, Washington 98101

EcoChem Project: C27701-3

November 27, 2019

Approved for Release:

Christina Mott Frans
Project Manager
EcoChem, Inc.

PROJECT NARRATIVE

Basis for the Data Validation

This report presents the results of Summary and Full Validation (EPA Stage 2A and EPA Stage 4) performed on sediment and field and laboratory quality control sample data for samples collected at the Head of Swan Island Lagoon at Portland Harbor. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by Analytical Resources, Inc., Tukwila, Washington. The analytical methods and EcoChem project chemists are listed below.

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
PCB Aroclors	SW8082A	E. Clayton	C. Frans
Total Organic Carbon	SW9060A		
Total Solids	SM 2540 G-97		

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Head of Swan Island Lagoon Sediment Field Sampling Plan Portland Harbor Superfund Site* (Pacific Groundwater Group, October 22, 2018*); National Functional Guidelines for Organic Data Review* (USEPA 2008 & 2014); and *National Functional Guidelines for Inorganic Data Review* (USEPA 2010).

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned an R, the data are to be rejected and should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced previously.

Data qualifier definitions, reason codes, and validation criteria are included as Appendix A. A Qualified Data Summary Table is included in Appendix B. Data Validation Worksheets will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT
Pacific Groundwater Group: PH Head of Swan Island Sediments
PCB Aroclors by EPA 8082A

This report documents the review of analytical data from the analysis of sediment samples and the associated laboratory quality control (QC) samples. Samples were analyzed by Analytical Resources, Inc., Tukwila, Washington. Refer to the Sample Index for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
19I0008	66 Sediment, 2 Water & 2 Field Blank	EPA Stage 2A EPA Stage 4 (batch BHI0176)
19J0249	3 Sediment	EPA Stage 2A

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs and results reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Ten percent (10%) of the laboratory QC results were also verified.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	✓	Laboratory Control Samples (LCS)
✓	Initial Calibration (ICAL)	1	Certified Reference Material
✓	Continuing Calibration (CCAL)	1	Field Duplicates
✓	Laboratory Blanks	✓	Target Analyte List
1	Field Blanks	1	Reporting Limits
2	Surrogate Compounds	2	Compound Identification
2	Internal Standards	2	Reported Results
2	Matrix Spikes/Matrix Spike Duplicates (MS/MSD)	1	Calculation Verification (Full validation only)
2	Laboratory Duplicates		

1 Quality control results are discussed below, but no data were qualified.
2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

The validation guidance documents state that the cooler temperatures should be within an advisory temperature range of 2° to 6°C. The laboratory received the sample coolers within the advisory temperature range.

SDG 19I0008: Sample 712-82819 has a collection date of 8/27/19 on the chain-of-custody (COC), however, the identification (ID) segment indicates 8/28/19. This field blank sample was associated with samples collected on 8/28/19.

Field Blanks

SDG 19I0008: Samples 711-82719 and 712-82819 were identified as field blanks. Target analytes were not detected in these blank samples, no qualification was required.

Surrogate Compounds

The surrogate compounds tetrachloro-m-xylene (TCMX) and decachlorobiphenyl (DCBP) were added to all samples. With the following exceptions, all surrogate recovery values were within the laboratory control limits.

SDG 19I0008: The surrogate recoveries were greater than the laboratory control limit for decachlorobiphenyl in Samples J5-SC1b-40to50-82719 and H3-SC1b-50to60-82719, and the matrix spike samples for H3-SC1b-20to30-82819 and H3-SC1b-20to30-82819. No results were qualified for these outliers because QC samples are not qualified, and the field samples were analyzed at a 10X dilution factor and were diluted beyond a level of accurate quantitation.

Matrix Spikes/Matrix Spike Duplicates

Matrix spike/matrix spike duplicate samples (MS/MSD) were analyzed at the appropriate frequency. No action is taken unless both the MS and MSD %R values are outside the control limits for MS/MSD %R outliers. When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-8). Only the associated positive results are estimated (J-8) if the %R values indicate a potential high bias. Precision is indicated by the relative percent difference (RPD) between the MS and MSD values. Associated positive results are estimated (J-9) if the RPD values indicate uncertainty. Qualifiers were only issued to the parent sample.

SDG 19I0008: Samples J3-SC1b-30to40-82719, H3-SC1b-20to30-82819, and J5-SC1b-20to30-82719 were analyzed as the MS/MSD samples. The %R values for Aroclor 1260 were less than the lower control limit or not recovered; the associated results in the parent samples were estimated (J-8L).

Sample R4-SC1b-20to30-82819 was analyzed as the MS/MSD sample. The MS %R value for Aroclor 1260 was less than the lower control limit but was in control in the associated MSD sample; no data were qualified for this single outlier.

SDG 19J0129: Sample J3-SC-00to10-102218 was analyzed as the MS/MSD sample. The MSD %R values for Aroclor 1016 and 1260 were less than the lower control limits but were in control in the associated MS sample; no data were qualified for these single outliers.

Laboratory Duplicates

One sample from each laboratory batch was extracted and analyzed in duplicate. Relative percent difference (RPD) values were calculated for detected analytes where results are greater than five

times the reporting limit (RL). With the exception noted below, all RPD values were less than the 20% control limit.

SDG 19I0008: Sample J5-SC1b-30to40-82719 was analyzed as a laboratory duplicate sample. The RPD value for Aroclor 1254 was greater than the control limit 32%; the associated result in the parent sample was estimated (J-9).

Certified Reference Material

The laboratory extracted and analyzed Sigma-Aldrich reference material for Aroclor-1254 (PCB1254-Loam). The criteria for CRM recovery are that the reported results are within ±20% of the 95% confidence interval of the true value for analytes with reference concentrations greater than five times the detection limit.

All CRM results were within the control limits.

Field Duplicates

For sediment samples, the RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL. No data were qualified based on field duplicate precision outliers. Users of the data should consider the impact of field precision outliers on the reported results.

SDG 19I0008: Samples J3-SC1b-80to90-82719 & 412-80to90-82719, R4-SC1b-40to50-82819 & 413-SC1b-40to50-82819, and 411-SC1b-50to60-82619 & D6-SC1b-50to60-82619 were submitted as field duplicates. Field precision was acceptable.

Reporting Limits

Reporting limits were elevated due to required dilutions and/or percent moisture adjustment and were greater than the work plan specified limits.

Compound Identification

As required by the method, the laboratory analyzed any samples with positive detections on a confirmatory column. The results from the two analytical columns were compared for agreement. An elevated RPD value may indicate the presence of an interference resulting in a high bias. When the RPD value was greater than or equal to 40% but less than 60% the reported value was estimated (J-3). If the RPD value was greater than 60%, the result was qualified as a tentative identification (NJ-3). Confirmation outliers resulting in data qualification are discussed below.

For the following samples, the second column confirmation RPD values were greater than 40% and were estimated (J/NJ-3):

SDG	Sample ID	Compound	RPD	Qualifier
19I0008	J3-SC1b-40to50-82719	Aroclor 1254	49.0	J-3

SDG	Sample ID	Compound	RPD	Qualifier
19I0008	J6-SC1b-20to30-82819	Aroclor 1254	43.2	J-3
	R4-SC1b-20to30-82819	Aroclor 1260	73.8	NJ-3
	R4-SC1b-70to80-82819	Aroclor 1248	44.4	J-3
	R4-SC1b-80to90-82819	Aroclor 1254	42.5	J-3
		Aroclor 1248	68.0	NJ-3
	R4-SC1b-100to110-82819	Aroclor 1248	70.4	NJ-3
	R4-SC1b-110to120-82819	Aroclor 1248	46.3	J-3
	R4-SC1b-120to130-82819	Aroclor 1254	40.3	J-3
		Aroclor 1248	64.1	NJ-3
	R4-SC1b-130to140-82819	Aroclor 1254	44.3	J-3
	J5-SC1b-90to100-82719	Aroclor 1260	48.0	J-3
	J5-SC1b-80to90-82719	Aroclor 1254	200	NJ-3
19J0129	D6-SC-0to1-102118	Aroclor 1248	48.4	J-3

Reported Results

SDG 19I0008: Sample J6-SC1b-40to50-82819 was reanalyzed at a 5x dilution due to an instrument response for Aroclor 1260 that exceeded the calibration range. Both sets of results were reported. The over range result was flagged as do-not report (DNR-20) and all other results in the diluted sample were flagged as do-not-report (DNR-11).

Calculation Verification

SDG 19I0008: Several results in batch 288730 of this SDG were verified by recalculation from the raw data. No calculation or transcription errors were found.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed the specified analytical method. With the exceptions noted above, accuracy was acceptable as demonstrated by the surrogate, LCS/LCSD, and MS/MSD recoveries. With the exceptions noted above, precision was also acceptable as demonstrated by the LCS/LCSD, MS/MSD, and field and laboratory duplicate RPD values.

Data were estimated due to MS/MSD accuracy outliers and a laboratory duplicate precision outlier. Results were also estimated and tentatively identified based on dual column confirmation RPD outliers.

Results were qualified as do-not-report to indicate which result not to use from multiple reported results. Data flagged as do-not-report should not be used for any reason.

All other data, as qualified, are acceptable for use.

DATA VALIDATION REPORT
Pacific Groundwater Group: PH Head of Swan Island Sediments
Conventional Tests

This report documents the review of analytical data from the analysis of sediment samples and the associated laboratory and field quality control (QC) samples. Samples were analyzed by Analytical Resources, Inc, Tukwila, Washington. Refer to the Sample Index for a complete list of samples.

SDG	Number of Samples and Matrix	Validation Level
19I0008	48 Sediment & 2 Field Blank	EPA Stage 3 (batch BHI0179) & EPA Stage 2A

The analytical tests that were performed are summarized below:

Parameter	Method
Total Solids	SM2540G
Total Organic Carbon (TOC)	EPA 9060

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

EDD TO HARDCOPY VERIFICATION

All sample IDs and results reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Ten percent (10%) of the laboratory QC results were also verified.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

✓	Sample Receipt, Preservation, and Holding Times	2	Matrix Spikes (MS) and Matrix Spike Duplicates (MSD)
✓	Initial Calibration	✓	Laboratory Duplicates
✓	Calibration Verification	1	Field Duplicates
✓	Laboratory Blanks	✓	Reporting Limits
1	Field Blanks	✓	Reported Results
1	Reference Materials	1	Calculation Verification (Full validation only)
✓	Laboratory Control Samples (LCS)		

✓ Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.
1 Quality control results are discussed below, but no data were qualified.
2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Field Blanks

Samples 711-82719 and 712-82819 were identified as field blanks. No target analytes were detected.

Reference Materials

No certified reference materials were submitted.

Matrix Spikes/Matrix Spike Duplicate

Matrix spike/matrix spike duplicate samples (MS/MSD) were analyzed at the proper frequency of one per 20 samples or one per batch for soil samples. Where analyte concentrations were less than 4x the spike amount, the percent recovery (%R) and relative percent difference (RPD) values were evaluated. The recovery control limits are 80%-120%. If the percent recovery values indicate a potential low bias, associated results are estimated (J/UJ-8). If the %R values indicate a potential high bias, only the associated positive results are estimated (J-8). Precision is indicated by the relative percent difference (RPD) between the MS and MSD values. RPD values outside the control limits indicate uncertainty in the measured results for the sample and positive results are estimated (J-9). Qualifiers were issued to all samples associated with a QC batch. With the following exceptions %R and RPD values were within the laboratory control limits.

For batch BHI0374, Sample J3-SC1b-30to40-82719 was used for the TOC matrix spikes, the MS/MSD %R values for total organic carbon (TOC) were less than the lower control limit; all associated TOC results in the batch were estimated (J-8L) to indicate a potential low bias.

Field Duplicate

For sediment samples, the RPD control limit is 50% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL. No data were qualified based on field duplicate precision outliers. Users of the data should consider the impact of field precision outliers on the reported results.

Samples J3-SC1b-80to90-82719 & 412-80to90-82719 and R4-SC1b-40to50-82819 & 413-SC1b-40to50-82819 were submitted as field duplicates. Field precision was acceptable.

Calculation Verification

Several results were verified by recalculation from the raw data. No calculation or transcription errors were found.

OVERALL ASSESSMENT

As was determined by this evaluation, the laboratory followed the specified analytical methods. With the exceptions noted previously, accuracy was acceptable, as demonstrated by the laboratory control sample and matrix spike recoveries. Precision was also acceptable as demonstrated by the laboratory and field duplicate RPD values.

Data were qualified for matrix spike recovery outliers.

All data, as qualified, are acceptable for use.

ECOCHEM
Data Quality

APPENDIX A

DATA QUALIFIER DEFINITIONS
REASON CODES
AND CRITERIA TABLES

DATA VALIDATION QUALIFIER CODES
Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

DATA QUALIFIER REASON CODES

Group	Code	Reason for Qualification
Sample Handling	1	Improper Sample Handling or Sample Preservation (i.e., headspace, cooler temperature, pH, summa canister pressure); Exceeded Holding Times
Instrument Performance	24	Instrument Performance (i.e., tune, resolution, retention time window, endrin breakdown, lock-mass)
	5A	Initial Calibration (RF, %RSD, r^2)
	5B	Calibration Verification (CCV, CCAL; RF, %D, %R) Use bias flags (H,L)[1] where appropriate
	5C	Initial Calibration Verification (ICV %D, %R) Use bias flags (H,L)[1] where appropriate
Blank Contamination	6	Field Blank Contamination (Equipment Rinsate, Trip Blank, etc.)
	7	Lab Blank Contamination (i.e., method blank, instrument blank, etc.) Use low bias flag (L)[1] for negative instrument blanks
Precision and Accuracy	8	Matrix Spike (MS and/or MSD) Recoveries Use bias flags (H,L)[1] where appropriate
	9	Precision (all replicates: LCS/LCSD, MS/MSD, Lab Replicate, Field Replicate)
	10	Laboratory Control Sample Recoveries (a.k.a. Blank Spikes) Use bias flags (H,L)[1] where appropriate
	12	Reference Material Use bias flags (H,L)[1] where appropriate
	13	Surrogate Spike Recoveries (a.k.a. labeled compounds, recovery standards) Use bias flags (H,L)[1] where appropriate
Interferences	16	ICP/ICP-MS Serial Dilution Percent Difference
	17	ICP/ICP-MS Interference Check Standard Recovery Use bias flags (H,L)[1] where appropriate
	19	Internal Standard Performance (i.e., area, retention time, recovery)
	22	Elevated Detection Limit due to Interference (i.e., chemical and/or matrix)
	23	Bias from Matrix Interference (i.e. diphenyl ether, PCB/pesticides)
Identification and Quantitation	2	Chromatographic pattern in sample does not match pattern of calibration standard
	3	2nd column confirmation (RPD or %D)
	4	Tentatively Identified Compound (TIC) (associated with NJ only)
	20	Calibration Range or Linear Range Exceeded
	25	Compound Identification (i.e., ion ratio, retention time, relative abundance, etc.)
Miscellaneous	11	A more appropriate result is reported (multiple reported analyses i.e., dilutions, re-extractions, etc. Associated with "R" and "DNR" only)
	14	Other (See DV report for details)
	26	Method QC information not provided

[1] H = high bias indicated
L = low bias indicated

QC Element	Acceptance Criteria (NFG)	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Precision and Accuracy					
MS/MSD (recovery)	One set per matrix per batch (of ≤ 20 samples) AR1016 and AR1260: %R = 29% - 135%, or project limits	NFG [1] Method [2]	Qualify parent only unless other QC indicates systematic problems. J (pos) if both %R > upper control limit (UCL) J (pos)/UJ (ND) if both %R < lower control limit (LCL) J (pos)/R (ND) if both %R < 10%	8	No action if only one spike %R is outside criteria. No action if native analyte conc. > 5x the amount spiked. Use bias flags (H,L) where appropriate. Actions apply to all Aroclors in parent sample.
MS/MSD (RPD)	One set per matrix per batch (of ≤ 20 samples) AR1016: RPD < 15%, AR1260: RPD < 20% or project limits	NFG [1] Method [2]	Qualify parent only unless other QC indicates systematic problems. J (pos) if RPD > control limit	9	No action if parent is ND.
LCS	One per lab batch (of ≤ 20 samples) AR1016 and AR1260: %R = 50% - 150%, or project limits	NFG [1]	J (pos) if %R > UCL J (pos)/UJ (ND) if %R < LCL J (pos)/R (ND) if %R < 10%	10	Use bias flags (H,L) where appropriate. Actions apply to all Aroclors in associated samples.
LCS/LCSD (RPD)	if analyzed use MS/MSD RPD criteria	NFG [1]	J (pos) assoc. compound in all samples	9	LCSD not required by method or NFG
Precision and Accuracy					
Surrogates	TCMX and DCBP added to every sample %R = 30% - 150% or project limits	NFG [1] Method [2]	J (pos) if either %R > UCL J (pos)/UJ (ND) if either %R < LCL J (pos)/R (ND) if either %R < 10%	13	If %R < 10% (sample dilution is a factor), use PJ Use bias flags (H,L) where appropriate
Internal Standards (if used)	Acceptable Range: IS area = 50% to 200% of CCAL area RT within 30 seconds of CC RT	Method [2]	J (pos) if area > 200% J (pos)/UJ (ND) if area < 50% J (pos)/R (ND) if area < 25% RT > 30 seconds, narrate	19	
Field Duplicates	**Solids:** RPD < 50% OR difference < 2X RL (for results < 5X RL) **Aqueous:** RPD < 35% OR difference < 1X RL (for results < 5X RL)	EcoChem	J (pos)/UJ (ND) Qualify only parent and field duplicate samples	9	use project limits if specified

PCB Aroclors by GC
(Based on Organic NFG 2008 and SW-846 Method 8082A)

QC Element	Acceptance Criteria (NFG)	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Compound Identification/Quantification					
Quantitation/ Identification	Between two columns: RPD < 40% or %D < 25% Within Retention Time Windows on both columns.	NFG [1] Method [2]	J (pos) if RPD = 40% - 60% (25% - 60% for %D) NJ (pos) if > 60% R (pos) if RTW criterion not met	3	See TM-08 for additional info.
Calibration Range	on column concentration < high calibration standard	NFG [1] Method [2]	J (pos) if conc > high standard and sample was not diluted	20	
Dilutions, Re-extractions and/or Reanalyses	Report only one result per analyte	Standard reporting policy	Use "DNR" to flag results that will not be reported.	11	TM-04 Rev. 1 for additional info.
Sample Clean-up					
GPC/Sulfur/ Florisil/Acid	No criteria - cleanups are optional	NFG [1] Method [2]	Use Professional Judgment	14	special cleanups may be required for project cleanup standards may be associated with GPC/florisil cleanups

Conventional Methods with Instrument Calibrations (i.e., Ion Chromatography, Total Organic Carbon)
(Based on Inorganic NFG 2010 and EPA methods)

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Sample Handling					
Cooler/Storage Temperature Preservation	Cooler temperature: 4°C±2°C Preservation: Analyte/Method Specific	NFG [(1)] Method [(2)]	J (pos)/UJ (ND) if preservation requirements not met	1	Use **PJ** to qualify for cooler temp outliers.
Holding Time	Analyte/Method Specific	NFG [(1)] Method [(2)]	J (pos)/UJ (ND) if holding time exceeded	1	
Instrument Performance					
Initial Calibration (ICAL)	blank + multiple standards as per method requirements r ≥ 0.995	NFG [(1)] Method [(2)]	J (pos)/UJ (ND) for r < 0.995	5A	
Initial Calibration Verification (ICV)	Independent source analyzed immediately after calibration %R method specific	NFG [(1)] Method [(2)]	J (pos)/UJ (ND) if %R < lower control limit (LCL) J (pos) if %R > upper control limit (UCL)	5A (H,L)[3]	Qualify all samples in run
Continuing Calibration Verification (CCV)	Immediately following ICV, every 10 samples, and end of run %R method specific	NFG [(1)] Method [(2)]	J(pos)/UJ(ND) if %R < LCL J(pos) if %R > UCL	5B (H,L)[3]	Qualify samples bracketed by CCV outliers
Blank Contamination					
Method Blank (MB)	One per matrix per batch of (of ≤ 20 samples) Blank conc < MDL	NFG [(1)] Method [(2)]	U (pos) if result is < 5X method blank concentration	7	Refer to **TM-02** for additional information. Blank Evaluation based on NFG 1994

Copyright 2014 EcoChem, Inc.

Conventional Methods with Instrument Calibrations (i.e., Ion Chromatography, Total Organic Carbon)
(Based on Inorganic NFG 2010 and EPA methods)

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Instrument Blanks (ICB/CCB)	After each ICV & CCV | blank concentration | < MDL	NFG [(1)] Method [(2)]	Action level is 5x absolute value of blank conc. For positive blanks: U (pos) results < action level For negative blanks: J (pos)/UJ (ND) results < action level	Pos Blanks: 7 Neg Blanks: 7L[3]	Use blanks bracketing samples for Qualification Refer to **TM-02** for additional information. **Hierarchy of blank review:** **#1 - Review MB, quaify as needed** **#2 - Review IB , qualify as needed** **#3 - Review FB , qualify as needed**
Field Blank (FB)	Blank conc < MDL	EcoChem standard policy	U (pos) if result is < 5x action level, as per analyte.	6	Qualify in associated field samples only. Refer to **TM-02** for additional information.
Precision and Accuracy					
Laboratory Control Sample (LCS)	One per matrix per batch (of ≤ 20 samples) %R within Method control limits (or Laboratory control limtis if none specified in method)	NFG [(1)] Method [(2)]	J (pos)/UJ (ND) if %R < LCL J (pos) if %R > UCL	10 (H,L)[3]	Qualify all samples in batch QAPP may have overriding accuracy limits.
Reference Materials (RM, CRM, SRM)	Result ±20% of the 95% confidence interval of the true value for analytes	EcoChem standard policy	J (pos)/UJ (ND) if < LCL J (pos) if > UCL	12 (H,L)[3]	QAPP may have overriding accuracy limits. Some manufacturers may have different RM control limits

PROJECT NARRATIVE

Basis for the Data Validation

This report presents the results of Full Validation (EPA Stage 4) performed on sediment and quality control sample data for samples collected at the Head of Swan Island Lagoon at Portland Harbor. A complete list of samples is provided in the **Sample Index**.

Samples were analyzed by TestAmerica Laboratories, Inc. Fife, Washington, TestAmerica Laboratories, Inc., Knoxville, Tennessee, TestAmerica Laboratories, Inc. Sacramento, California, ALS Environmental, Kelso, Washington, SGS Axys, Sidney BC, Canada, and GEL . The analytical methods and EcoChem project chemists are listed below.

ANALYSIS	METHOD	PRIMARY REVIEW	SECONDARY REVIEW
Dioxins/Furans	EPA1613B	E. Clayton	C. Frans

The data were reviewed using guidance and quality control criteria documented in the analytical methods; *Head of Swan Island Lagoon Sediment Field Sampling Plan Portland Harbor Superfund Site* (Pacific Groundwater Group, October 22, 2018*); National Functional Guidelines for Organic Data Review* (USEPA 2008 & 2014); *National Functional Guidelines for Chlorinated Dibenzo-p-Dioxins (CDDs) & Chlorinated Dibenzofurans (CDFs) Data Review,* (USEPA September 2011); and USEPA *R10 Data Validation and Review Guidelines for Polychlorinated Dibenzo-p-Dioxin and Polychlorinated Dibenzofuran Data (PCDD/PCDF) Using Method 1613B and SW846 Method 8290A (USEPA May 2014)*.

EcoChem's goal in assigning data assessment qualifiers is to assist in proper data interpretation. If values are estimated (J or UJ), data may be used for site evaluation and risk assessment purposes but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned an R, the data are to be rejected and should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet the data quality objectives as stated in the documents and methods referenced previously.

Data qualifier definitions, reason codes, and validation criteria are included as Appendix A. A Qualified Data Summary Table is included in Appendix B. Data Validation Worksheets will be kept on file at EcoChem, Inc. A qualified laboratory electronic data deliverable (EDD) is also submitted with this report.

DATA VALIDATION REPORT
Pacific Groundwater Group: PH Head of Swan Island Sediments
Dioxin/Furan Compounds by EPA 1613B

This report documents the review of analytical data from the analysis of solid samples and the associated laboratory quality control (QC) samples. Samples were analyzed by SGS Axys, Sidney BC, Canada. Refer to the Sample Index for a complete list of samples.

SDG	NUMBER OF SAMPLES	VALIDATION LEVEL
WG69303	12 Solid	Stage 4

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and anomalies were discussed in the case narrative. The laboratory reported more analytes in the report and the EDD than were requested. The laboratory resubmitted the reports and EDD files with the extra results removed.

EDD TO HARDCOPY VERIFICATION

All sample IDs and results reported in the electronic data deliverable (EDD) were verified (100% verification) by comparing the EDD to the hardcopy laboratory data package. Ten percent (10%) of the laboratory QC results were also verified.

TECHNICAL DATA VALIDATION

The quality control (QC) requirements that were reviewed are listed in the following table.

1	Sample Receipt, Preservation, and Holding Times	2	Certified Reference Material
✓	System Performance and Resolution Checks	1	Field Duplicates
✓	Initial Calibration (ICAL)	✓	Target Analyte List
✓	Calibration Verification (CVER)	✓	Reporting Limits
2	Laboratory Blanks	2	Compound Identification
1	Field Blanks	✓	Compound Quantitation
✓	Labeled Compound Recovery	✓	Reported Results
2	Matrix Spike/Matrix Spike Duplicates (MS/MSD)	1	Calculation Verification
✓	Ongoing Precision and Recovery (OPR)		

✓Method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.
1 Quality control results are discussed below, but no data were qualified.
2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Sample Receipt, Preservation, and Holding Times

The validation guidance documents state that the cooler temperatures should be within an advisory temperature range of ≤6°C. The laboratory received the sample cooler within the advisory temperature range.

The laboratory noted that Sample J5-SC-60to80-102218 arrived in a broken jar and the sample label information was used to log in Sample L3-SC-00to10-102218.

Laboratory Blanks

To assess the impact of any blank contaminant (excluding homologs) on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U-7). No action is taken if the sample result is greater than the action level, or for non-detected results. The laboratory assigned EMPC-flags to values when a peak was detected but did not meet identification criteria. These values cannot be considered as positive identifications but are "estimated maximum possible concentrations". When these occurred in the method blank the results were considered as false positives. No action levels were established for these analytes.

Method blanks were analyzed at the appropriate frequency. Contaminant levels, associated samples, and action levels are documented in the data validation worksheets.

OCDD, OCDF, and 1,2,3,7,8-PeCDF were detected, results less than the action level for 1,2,3,7,8-PeCDF were qualified as not detected (U-7) at the reported concentrations in the associated samples.

Field Blanks

Field blank samples were not submitted with this dataset.

Matrix Spike/Matrix Spike Duplicate

Matrix spike/matrix spike duplicate (MS/MSD) samples were not analyzed with this data set. Accuracy was assessed using the ongoing precision and recovery sample as well as the reference material recoveries.

Certified Reference Material

The laboratory extracted and analyzed Clean Soil Reference Material (EDF-5183). The criterion for CRM recovery is that the reported result is within ±2x the standard deviation of the true value for analytes with reference concentrations greater than five times the detection limit. The acceptance criteria were not applied to results for 2,3,7,8-TCDD, 1,2,3,7,8-PeCDD, 1,2,3,7,8-PeCDF, 2,3,4,7,8-PeCDF, and 1,2,3,7,8,9-HxCDF because the certified values were less than five times (5x) the detection limit.

SDG WG69303: Triplicate CRMs were extracted and analyzed. Qualifiers were only applied to analytes with recoveries outside of the control limits for two of the three analyses of the reference

material. Qualifiers were not assigned for single outliers. With the following exceptions, all acceptance criteria were met.

Laboratory ID	Compound	Recovery Outlier	Qualifier
WG69303-104 & WG69303-105	1,2,3,6,7,8-HxCDD	High	J-12H
	1,2,3,4,6,7,8-HpCDF		
	1,2,3,4,7,8,9-HpCDF		
	1,2,3,4,6,7,8,9-OCDF		

Field Duplicates

Field duplicate samples were not submitted with this data set.

Compound Identification

The method requires the confirmation of 2,3,7,8-TCDF detects using an alternate GC column. The DB5 column that is typically used cannot fully separate 2,3,7,8-TCDF from closely eluting non-target TCDF isomers. The laboratory performed a second column confirmation for all samples with detections greater than the reporting limit on a DB225 column. All 2,3,7,8-TCDF results reported from the DB5 column were qualified as do-not-report (DNR-11) in favor of the DB225 results.

The laboratory reported results for 1,2,3,7,8,9-HxCDD from both analysis columns and indicated the primary column results as not reportable in the EDD. Therefore, all 1,2,3,7,8,9-HxCDD results reported from the DB5 column were qualified as do-not-report (DNR-11) in favor of the DB225 results.

For several samples, the laboratory reported EMPC or "estimated maximum possible concentration" values for one or more of the target analytes. An EMPC value is reported when a peak was detected but did not meet identification criteria, as required by the method; therefore, the result cannot be considered as a positive identification for the analyte. To indicate that the reported result for an individual analyte is in effect an elevated detection limit, the EMPC values were qualified as not detected (U-25) for all compound results below the reporting limit and were estimated (J-25) for all compound results greater than the reporting limit.

Calculation Verification

Calculation verifications were performed. No calculation or transcription errors were found.

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory performed the specified analytical method. With the exceptions noted above, accuracy was acceptable, as demonstrated by the labeled compound and OPR recoveries. With the exceptions noted above, precision was also acceptable as indicated by the field duplicate samples.

Data were qualified as not detected at the reported concentrations due to method blank contamination. Results were estimated due to CRM recovery outliers. Data were qualified as not detected or estimated to indicate that EMPC values represent elevated detection limits.

Data were flagged as do-not-report due to multiple results reported for a given analyte. Data flagged as do-not-report should not be used for any reason.

All other data, as qualified, are acceptable for use.

Data Quality

APPENDIX A

DATA QUALIFIER DEFINITIONS
REASON CODES
AND CRITERIA TABLES

DATA VALIDATION QUALIFIER CODES
Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.

DATA QUALIFIER REASON CODES

Group	Code	Reason for Qualification
Sample Handling	1	Improper Sample Handling or Sample Preservation (i.e., headspace, cooler temperature, pH, summa canister pressure); Exceeded Holding Times
Instrument Performance	24	Instrument Performance (i.e., tune, resolution, retention time window, endrin breakdown, lock-mass)
	5A	Initial Calibration (RF, %RSD, r^2)
	5B	Calibration Verification (CCV, CCAL; RF, %D, %R) Use bias flags (H,L)[1] where appropriate
	5C	Initial Calibration Verification (ICV %D, %R) Use bias flags (H,L)[1] where appropriate
Blank Contamination	6	Field Blank Contamination (Equipment Rinsate, Trip Blank, etc.)
	7	Lab Blank Contamination (i.e., method blank, instrument blank, etc.) Use low bias flag (L)[1] for negative instrument blanks
Precision and Accuracy	8	Matrix Spike (MS and/or MSD) Recoveries Use bias flags (H,L)[1] where appropriate
	9	Precision (all replicates: LCS/LCSD, MS/MSD, Lab Replicate, Field Replicate)
	10	Laboratory Control Sample Recoveries (a.k.a. Blank Spikes) Use bias flags (H,L)[1] where appropriate
	12	Reference Material Use bias flags (H,L)[1] where appropriate
	13	Surrogate Spike Recoveries (a.k.a. labeled compounds, recovery standards) Use bias flags (H,L)[1] where appropriate
Interferences	16	ICP/ICP-MS Serial Dilution Percent Difference
	17	ICP/ICP-MS Interference Check Standard Recovery Use bias flags (H,L)[1] where appropriate
	19	Internal Standard Performance (i.e., area, retention time, recovery)
	22	Elevated Detection Limit due to Interference (i.e., chemical and/or matrix)
	23	Bias from Matrix Interference (i.e. diphenyl ether, PCB/pesticides)
Identification and Quantitation	2	Chromatographic pattern in sample does not match pattern of calibration standard
	3	2nd column confirmation (RPD or %D)
	4	Tentatively Identified Compound (TIC) (associated with NJ only)
	20	Calibration Range or Linear Range Exceeded
	25	Compound Identification (i.e., ion ratio, retention time, relative abundance, etc.)
Miscellaneous	11	A more appropriate result is reported (multiple reported analyses i.e., dilutions, re-extractions, etc. Associated with "R" and "DNR" only)
	14	Other (See DV report for details)
	26	Method QC information not provided

[1] H = high bias indicated
L = low bias indicated

Dioxin/Furan Analysis by HRMS
(Based on Dioxin NFG 2011 and Methods EPA 1613B and SW-846 8290)

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Sample Handling					
Cooler/Storage Temperature Preservation	Waters/Solids ≤ 6°C & in the dark Tissues <-10°C & in the dark **Preservation Aqueous:** If Cl_2 is present Thiosulfate must be added and if pH > 9 it must be adjusted to 7 - 9	NFG [1] Method[2]	J(pos)/R(ND) if thiosulfate not added if Cl_2 present; J(pos)/UJ(ND) if pH not adjusted J(pos)/UJ(ND) if temp > 20°C	1	**EcoChem PJ, see TM-05**
Holding Time	**If properly stored, 1 year or:** **Extraction (all matrices):** 30 days from collection **Analysis (all matrices)**: 45 days from extraction	NFG [1] Method[2]	If not properly stored or HT exceedance: J(pos)/UJ(ND)	1	**EcoChem PJ, see TM-05** Gross exceedance = > 1 year 2011 NFG **Note:** Under CWA, SDWA, and RCRA the HT for H2O is 7 days.
Instrument Performance					
Mass Resolution (Tuning)	PFK (Perfluorokerosene) ≥10,000 resolving power at m/z 304.9824. Exact mass of m/z 380.9760 w/in 5 ppm of theoretical value (380.97410 to 380.97790) . Analyzed prior to ICAL and at the start and end of each 12 hr. shift.	NFG [1] Method [2]	R(pos/ND) all analytes in all samples associated with the tune	24	Notify PM
Windows Defining Mix	Peaks for first and last eluters must be within established retention time windows for each selector group (chlorination level)	NFG [1] Method [2]	If peaks are not completely within windows (clipped): If natives are ok, J(pos)/UJ(ND) homologs (Totals) If natives are affected, R all results for that selector group	24	Notify PM
Column Performance Mix	Both mixes must be analyzed before ICAL and CCAL Valley < 25% (valley = (x/y)*100%) where x = ht. of TCDD (or TCDF) & y = baseline to bottom of valley For all isomers eluting near the 2378-TCDD (TCDF) peak (TCDD only for 8290)	NFG [1] Method [2]	J(pos) if valley > 25%	24	**EcoChem PJ, see TM-05, Rev. 2**; Note: TCDF is evaluated only if second column confirmation is performed
Initial Calibration **Sensitivity**	S/N ratio > 10 for all native and labeled compounds in CS1 std.	NFG [1] Method [2]	If <10, elevate Det. Limit or R(ND)	5A	
Initial Calibration **Selectivity**	Ion Abundance ratios within QC limits (Table 8 of method 8290) (Table 9 of method 1613B)	NFG [1] Method [2]	If 2 or more ion ratios are out for one compound in ICAL, J(pos)	5A	**EcoChem PJ, see TM-05, Rev. 2**

Dioxin/Furan Analysis by HRMS
(Based on Dioxin NFG 2011 and Methods EPA 1613B and SW-846 8290)

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Instrument Performance (continued)					
Initial Calibration (Minimum 5 stds.) **Stability**	%RSD < 20% for native compounds %RSD <30% for labeled compounds (%RSD < 35% for labeled compounds under 1613b)	NFG [1] Method [2]	J(pos) natives if %RSD > 20%	5A	
	Absolute RT of $^{13}C_{12}$-1234-TCDD >25 min on DB5 & >15 min on DB-225	NFG [1] Method [2]	Narrate, no action		**EcoChem PJ, see TM-05, Rev. 2**
Continuing Calibration (Prior to each 12 hr. shift) **Sensitivity**	S/N ratio for CS3 standard > 10	NFG [1] Method [2]	If <10, elevate Det. Limit or R(ND)	5B	
Continuing Calibration (Prior to each 12 hr. shift) **Selectivity**	Ion Abundance ratios within QC limits (Table 8 of method 8290) (Table 9 of method 1613B)	NFG [1] Method [2]	For congener with ion ratio outlier, J(pos) natives in all samples associated with CCAL. No action for labeled congener ion ratio outliers.	25	**EcoChem PJ, see TM-05**
Continuing Calibration (Prior to each 12 hr. shift) **Stability**	%D+/-20% for native compounds %D +/-30% for labeled compounds **(Must meet limits in Table 6, Method 1613B)** If %D in the closing CCAL are within 25%/35%, the mean RF from the two CCAL may be used to calculate samples **(Section 8.3.2.4 of 8290)**.	NFG [1] Method [2]	**Labeled compounds:** Narrate, no action. **Native compounds:** 1613: J(pos)/UJ(ND)if %D is outside Table 6 limits J(pos)/R(ND) if %D is +/-75% of Table 6 limits 8290: J(pos)/UJ(ND) if %D = 20% - 75% J(pos)/R(ND) if %D > 75%	5B (H,L)[3]	
	Absolute RT of $^{13}C_{12}$-1234-TCDD and $^{13}C_{12}$-123789-HxCDD should be ± 15 seconds of ICAL RRT for all other compounds must meet criteria listed in Table 2 Method 1316.	NFG [1] Method [2]	Narrate, no action	5B	**EcoChem PJ, see TM-05**
Blank Contamination					
Method Blank (MB)	MB: One per matrix per batch of (of ≤ 20 samples) No detected compounds > RL	NFG [1] Method [2]	U(pos) if result is < 5X action level.	7	**Hierarchy of blank review:** **#1 - Review MB, qualify as needed** **#2 - Review FB , qualify as needed**
Field Blank (FB)	FB: frequency as per QAPP No detected compounds > RL		U(pos) if result is < 5X action level.	6

Dioxin/Furan Analysis by HRMS
(Based on Dioxin NFG 2011 and Methods EPA 1613B and SW-846 8290)

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Precision and Accuracy					
MS/MSD (recovery)	**MS/MSD not typically required for HRMS analyses.** If lab analyzes MS/MSD then one set per matrix per batch (of ≤ 20 samples) Use most current laboratory control limits	EcoChem standard policy	J(pos) if both %R > UCL - high bias J(pos)/UJ(ND) if both %R < LCL - low bias J(pos)/R(ND) if both %R < 10% - very low bias J(pos)/UJ(ND) if one > UCL & one < LCL, with no bias **PJ if only one %R outlier**	8 (H,L)[3]	No action if only one spike %R is outside criteria. No action if parent concentration is >4x the amount spiked. Qualify parent sample only unless other QC indicates systematic problems.
MS/MSD (RPD)	**MS/MSD not typically required for HRMS analyses.** If lab analyzes MS/MSD then one set per matrix per batch (of ≤ 20 samples) Use most current laboratory control limits	EcoChem standard policy	J(pos) in parent sample if RPD > CL	9	Qualify parent sample only.
LCS (or OPR)	One per lab batch (of ≤ 20 samples) Use most current laboratory control limits **or** Limits from Table 6 of 1613B	NFG (1) Method (2)	J(pos) if %R > UCL - high bias J(pos)/UJ(ND) if %R < LCL - low bias J(pos)/R(ND) if %R < 10% - very low bias	10 (H,L)[3]	No action if only one spike %R is outside criteria, when LCSD is analyzed. Qualify all associated samples.
LCS/LCSD (RPD)	**LCSD not typically required for HRMS analyses.** One set per matrix and batch of 20 samples RPD < 35%	Method (2) Ecochem standard policy	J(pos) assoc. compound in all samples if RPD > CL	9	Qualify all associated samples.
Lab Duplicate (RPD)	**Lab Dup not typically required for HRMS analyses.** One per lab batch (of ≤ 20 samples) Use most current laboratory control limits	EcoChem standard policy	J(pos)/UJ(ND) if RPD > CL	9	
Labeled Compounds (Internal Standards)	Added to all samples %R = 40% - 135% in all samples 8290 %R must meet limits in Table 7 Method 1613B	NFG (1) Method (2)	J(pos) if %R > UCL - high bias J(pos)/UJ(ND) if %R < LCL - low bias J(pos)/R(ND) if %R < 10% - very low bias	13 (H,L)[3]	
Field Duplicates	Solids: RPD <50% OR difference < 2X RL (for results < 5X RL) Aqueous: RPD <35% OR difference < 1X RL (for results < 5X RL)	EcoChem standard policy	Narrate and qualify if required by project	9	**Use professional judgment**

Copyright 2014 EcoChem, Inc.

Dioxin/Furan Analysis by HRMS
(Based on Dioxin NFG 2011 and Methods EPA 1613B and SW-846 8290)

QC Element	Acceptance Criteria	Source of Criteria	Action for Non-Conformance	Reason Code	Discussion and Comments
Compound ID and Calculation					
Quantitation/ Identification	All ions for each isomer must maximize within ± 2 seconds. S/N ratio >2.5 Ion ratios must meet criteria listed in Table 8 Method 8290, or Table 9 of 1613B; RRTs w/in limits in Table 2 of 1613B	NFG [1] Method [2]	Narrate in report; qualify if necessary NJ(pos) for retention time outliers. U(pos) for ion ratio outliers.	25	**EcoChem PJ, see TM-05**
EMPC (estimated maximum possible concentration)	If quantitation identification criteria are not met, laboratory should report an EMPC value.	NFG [1] Method [2]	If laboratory correctly reported an EMPC value, qualify the native compound U(pos) to indicate that the value is a detection limit and qualify total homolog groups J (pos)	25	**Use professional judgment See TM-18**
Interferences	Interferences from chlorodiphenyl ether compounds	NFG [1] Method [2]	J(pos)/UJ(ND) if present	23	**See TM-16**
	Lock masses must not deviate ± 20% from values in Table 8 of 1613B	Method [2]	J(pos)/UJ(ND) if present	24	**See TM-17**
Second Column Confirmation	All 2,3,7,8-TCDF hits must be confirmed on a DB-225 (or equiv) column. All QC criteria must also be met for the confirmation analysis.	NFG [1] Method [2]	Report the DB-225 value. If not performed use PJ.	3	DNR-11 DB5 result if both results from both columns are reported. **EcoChem PJ, see TM-05**
Calculation Check	Check 10% of field & QC sample results	EcoChem standard policy	Contact laboratory for resolution and/or corrective action	na	Full data validation only.
Electronic Data Deliverable (EDD)					
Verification of EDD to hardcopy data	EcoChem verify @ 10% unless problems noted; then increase level up to 100% for next several packages.		Depending on scope of problem, correct at EcoChem (minor issues) to resubmittal by laboratory (major issues).	na	EcoChem Project Manager and/or Database Administrator will work with lab to provide long-term corrective action.
Dilutions, Re-extractions and/or Reanalyses	Report only one result per analyte	Standard reporting policy	Use "DNR" to flag results that will not be reported.	11	

(pos) - positive (detected) results; (ND) - not detected results

DDx = dichlorodiphenyltrichloroethane and its derivatives

PAH = polycyclic aromatic hydrocarbon

PCB = polychlorinated biphenyls

PeCDD = Pentachlorodibenzo-p-dioxin

PeCDF = Pentachlorodibenzofuran

TCDD = Tetrachlorodibenzo-p-dioxin

ug/kg = micrograms per kilogram

ng/g = nanograms per gram

DDx = dichlorodiphenyltrichloroethane and its derivatives

PAH = polycyclic aromatic hydrocarbon

PCB = polychlorinated biphenyls

PeCDD = Pentachlorodibenzo-p-dioxin

PeCDF = Pentachlorodibenzofuran

TCDD = Tetrachlorodibenzo-p-dioxin

ug/kg = micrograms per kilogram

ng/g = nanograms per gram

DDx = dichlorodiphenyltrichloroethane and its derivatives

PAH = polycyclic aromatic hydrocarbon

PCB = polychlorinated biphenyls

PeCDD = Pentachlorodibenzo-p-dioxin

PeCDF = Pentachlorodibenzofuran

TCDD = Tetrachlorodibenzo-p-dioxin

ug/kg = micrograms per kilogram

ng/g = nanograms per gram

Appendix F. Validated Results - Grab and Shore Samples

	Bottom (cm)			24	18	26	26	28	27

% = percent

g/cm3 = grams per cubic centimeter

J = Reported result is an estimate

T = Total concentration from component analytes.

U = Analyte was not detected in sample

R = Rejected

DDx = dichlorodiphenyltrichloroethane and its derivatives

PAH = polycyclic aromatic hydrocarbon

PCB = polychlorinated biphenyls

PeCDD = Pentachlorodibenzo-p-dioxin

PeCDF = Pentachlorodibenzofuran

TCDD = Tetrachlorodibenzo-p-dioxin

ug/kg = micrograms per kilogram

ng/g = nanograms per gram

DDx = dichlorodiphenyltrichloroethane and its derivatives

PAH = polycyclic aromatic hydrocarbon

PCB = polychlorinated biphenyls

PeCDD = Pentachlorodibenzo-p-dioxin

PeCDF = Pentachlorodibenzofuran

TCDD = Tetrachlorodibenzo-p-dioxin

ug/kg = micrograms per kilogram

ng/g = nanograms per gram

% = percent

g/cm3 = grams per cubic centimeter

J = Reported result is an estimate

T = Total concentration from component analytes.

U = Analyte was not detected in sample

R = Rejected

DDx = dichlorodiphenyltrichloroethane and its derivatives

PAH = polycyclic aromatic hydrocarbon

PCB = polychlorinated biphenyls

PeCDD = Pentachlorodibenzo-p-dioxin

PeCDF = Pentachlorodibenzofuran

TCDD = Tetrachlorodibenzo-p-dioxin

ug/kg = micrograms per kilogram

ng/g = nanograms per gram

% = percent

g/cm3 = grams per cubic centimeter

J = Reported result is an estimate

T = Total concentration from component analytes.

U = Analyte was not detected in sample

R = Rejected

DDx = dichlorodiphenyltrichloroethane and its derivatives

PAH = polycyclic aromatic hydrocarbon

PCB = polychlorinated biphenyls

PeCDD = Pentachlorodibenzo-p-dioxin

PeCDF = Pentachlorodibenzofuran

TCDD = Tetrachlorodibenzo-p-dioxin

ug/kg = micrograms per kilogram

ng/g = nanograms per gram

% = percent

g/cm3 = grams per cubic centimeter

J = Reported result is an estimate

T = Total concentration from component analytes.

U = Analyte was not detected in sample

R = Rejected

DDx = dichlorodiphenyltrichloroethane and its derivatives

PAH = polycyclic aromatic hydrocarbon

PCB = polychlorinated biphenyls

PeCDD = Pentachlorodibenzo-p-dioxin

PeCDF = Pentachlorodibenzofuran

TCDD = Tetrachlorodibenzo-p-dioxin

ug/kg = micrograms per kilogram

ng/g = nanograms per gram

% = percent

g/cm3 = grams per cubic centimeter

J = Reported result is an estimate

T = Total concentration from component analytes.

U = Analyte was not detected in sample

R = Rejected

DDx = dichlorodiphenyltrichloroethane and its derivatives

PAH = polycyclic aromatic hydrocarbon

PCB = polychlorinated biphenyls

PeCDD = Pentachlorodibenzo-p-dioxin

PeCDF = Pentachlorodibenzofuran

TCDD = Tetrachlorodibenzo-p-dioxin

ug/kg = micrograms per kilogram

ng/g = nanograms per gram

% = percent

g/cm3 = grams per cubic centimeter

J = Reported result is an estimate

T = Total concentration from component analytes.

U = Analyte was not detected in sample

R = Rejected

DDx = dichlorodiphenyltrichloroethane and its derivatives

PAH = polycyclic aromatic hydrocarbon

PCB = polychlorinated biphenyls

PeCDD = Pentachlorodibenzo-p-dioxin

PeCDF = Pentachlorodibenzofuran

TCDD = Tetrachlorodibenzo-p-dioxin

ug/kg = micrograms per kilogram

ng/g = nanograms per gram

% = percent

g/cm3 = grams per cubic centimeter

J = Reported result is an estimate

T = Total concentration from component analytes.

U = Analyte was not detected in sample

R = Rejected

DDx = dichlorodiphenyltrichloroethane and its derivatives

PAH = polycyclic aromatic hydrocarbon

PCB = polychlorinated biphenyls

PeCDD = Pentachlorodibenzo-p-dioxin

PeCDF = Pentachlorodibenzofuran

TCDD = Tetrachlorodibenzo-p-dioxin

ug/kg = micrograms per kilogram

ng/g = nanograms per gram

% = percent

g/cm3 = grams per cubic centimeter

J = Reported result is an estimate

T = Total concentration from component analytes.

U = Analyte was not detected in sample

R = Rejected

DDx = dichlorodiphenyltrichloroethane and its derivatives

PAH = polycyclic aromatic hydrocarbon

PCB = polychlorinated biphenyls

PeCDD = Pentachlorodibenzo-p-dioxin

PeCDF = Pentachlorodibenzofuran

TCDD = Tetrachlorodibenzo-p-dioxin

ug/kg = micrograms per kilogram

ng/g = nanograms per gram

% = percent

g/cm3 = grams per cubic centimeter

J = Reported result is an estimate

T = Total concentration from component analytes.

U = Analyte was not detected in sample

R = Rejected

DDx = dichlorodiphenyltrichloroethane and its derivatives

PAH = polycyclic aromatic hydrocarbon

PCB = polychlorinated biphenyls

PeCDD = Pentachlorodibenzo-p-dioxin

PeCDF = Pentachlorodibenzofuran

TCDD = Tetrachlorodibenzo-p-dioxin

ug/kg = micrograms per kilogram

ng/g = nanograms per gram

% = percent

g/cm3 = grams per cubic centimeter

J = Reported result is an estimate

T = Total concentration from component analytes.

U = Analyte was not detected in sample

R = Rejected

DDx = dichlorodiphenyltrichloroethane and its derivatives

PAH = polycyclic aromatic hydrocarbon

PCB = polychlorinated biphenyls

PeCDD = Pentachlorodibenzo-p-dioxin

PeCDF = Pentachlorodibenzofuran

TCDD = Tetrachlorodibenzo-p-dioxin

ug/kg = micrograms per kilogram

ng/g = nanograms per gram

% = percent

g/cm3 = grams per cubic centimeter

J = Reported result is an estimate

T = Total concentration from component analytes.

U = Analyte was not detected in sample

R = Rejected

DDx = dichlorodiphenyltrichloroethane and its derivatives

PAH = polycyclic aromatic hydrocarbon

PCB = polychlorinated biphenyls

PeCDD = Pentachlorodibenzo-p-dioxin

PeCDF = Pentachlorodibenzofuran

TCDD = Tetrachlorodibenzo-p-dioxin

ug/kg = micrograms per kilogram

ng/g = nanograms per gram

% = percent

g/cm3 = grams per cubic centimeter

J = Reported result is an estimate

T = Total concentration from component analytes.

U = Analyte was not detected in sample

R = Rejected

Re: Evaluation of Bias in Polychlorinated Biphenyl (PCB) Results for Swan Island Lagoon (SIL) Sediments

Dear Ms. Sanscrainte:

This letter transmits two evaluations of import to Portland Harbor Superfund Site data quality and data use. The two evaluations are:

1. Evaluation of Bias in Polychlorinated Biphenyl Results for Swan Island Lagoon Sediments Obtained by EPA Method 8082A for Aroclors by Pacific Groundwater Group (PGG) (May 2020)[1].

2. Preliminary Evaluation of SIL PCB/Aroclor Sediment Data Generated by TestAmerica of Seattle, Washington by D.M.D., Inc. (April 20, 2020)[2].

The purpose of the PGG evaluation is to assess low bias that PGG observed in Aroclor totals by TestAmerica Seattle relative to polychlorinated biphenyl (PCB) congener totals for homogenized split sediment samples in Swan Island Lagoon (SIL) collected as part of:

1. Daimler Trucks North America (DTNA) 2018 sediment investigation (PGG 2019a[3] and 2021[4]) and

2. de maximis, inc. 2018 Head of the SIL Sediment Characterization (PGG 2019b[5]).

[1] PGG, 2020 (attached). Evaluation of Bias in Polychlorinated Biphenyl Results for Swan Island Lagoon Sediments Obtained by EPA Method 8082A for Aroclors.
[2] D.M.D., Inc., 2020 (attached). Preliminary Evaluation of SIL PCB/Aroclor Sediment Data Generated by TestAmerica (TA) of Seattle, Washington.
[3] PGG, 2019a. Surface and Subsurface Sediment Field Sampling Data Report, Swan Island Lagoon, Portland Harbor Superfund Site. Prepared for Daimler Trucks North America LLC.
[4] PGG, 2021. Phase 1b Surface and Subsurface Sediment Field Sampling Data Report, Swan Island Lagoon, Portland Harbor Superfund Site. Prepared for Daimler Trucks North America LLC.
[5] PGG, 2019b. Surface and Subsurface Sediment Field Sampling Data Report, Head of Swan Island Lagoon, Portland Harbor Superfund Site. Prepared for de maximis, inc.

PGG performed this evaluation using existing 2018 and 2019 third-party validated data. The data were submitted to US Environmental Protection Agency (USEPA) by DTNA (PGG 2019a) and de maximis, inc. (PGG 2019b).

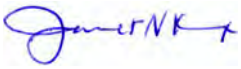
PGG used inter-method and inter-laboratory comparisons to assess bias in TestAmerica Seattle total Aroclors. PGG finds that the TestAmerica (Seattle) PCB Aroclor results suffer from a statistically significant negative (low) bias relative to PCB congener results (Exhibit 1). On average, TestAmerica's total Aroclor results are about six times lower than split total PCB congener results. Consequently, the false negative rate is 78% at the Remedial Action Level (75 micrograms per kilogram [ug/kg]) and 100% at the Principal Threat Waste (PTW) threshold (200 ug/kg). This means the TestAmerica (Seattle) total Aroclor data is unsuitable for concentration interpolations and Sediment Management Area (SMA) delineations.

The purpose of D.M.D, Inc.'s review (2020) is to identify possible causes of apparent consistent low bias in Aroclor results generated by TestAmerica (Seattle). This preliminary review identifies multiple deficiencies in data generation that result in biased reporting of total PCBs in sediment samples, such as erroneous target analyte identifications and/or low bias in reported concentrations. Factors identified as having potentially significant and adverse effects on data quality are:

1. Target analyte recovery indicators (surrogate compounds and matrix spikes) are typically at the low end of performance specifications.

2. Generally inadequate extract clean-ups to allow detection and identification of all target analytes.

3. Unreliable data processing algorithm for identification and quantitation of all target analytes, especially for mixtures of Aroclors.



In the Swan Island Lagoon, TestAmerica Aroclor data for the Pre-Design Group Investigation (PDI) (AECOM and Geosyntec 2019[6]), DTNA (PGG 2019a and 2021), and de maximis (PGG 2019b) overwhelmingly quantify one Aroclor per sample for detections (98.7%), while the Portland Harbor Superfund Remedial Investigation data typically quantify more than one Aroclor (91.1%) (Exhibit 2). Further, surrogate recoveries, identified by D.M.D., Inc. (2020) as a potential indicator of systematic performance issues, are at the low end of performance specifications across TestAmerica Aroclor results for PDI, DTNA, and de maximis data (Exhibit 3).

Based on this work, we recommend that all TestAmerica (Seattle) Aroclor results be excluded from the SIL data set. The issues identified are not unique to SIL samples and likely extend to other TestAmerica (Seattle) Aroclor data such as in the PDI data set.

Re: Evaluation of Bias in Polychlorinated Biphenyl Results for Swan Island Lagoon Sediments Obtained by EPA Method 8082A for Aroclors

Date: May 12, 2020 rev. February 17, 2021

EXECUTIVE SUMMARY

In 2018 and 2019 Daimler Trucks North America (DTNA) (PGG 2019a and 2021) and de maximis, inc. (de maximis) (PGG 2019b) collected surface and subsurface sediments in the Swan Island Lagoon (SIL) portion of the Portland Harbor Superfund Site (PHSS). The purpose of this sampling study was to determine whether the TestAmerica (Seattle) polychlorinated biphenyl (PCB) Aroclor sampling results collected during DTNA and de maximis investigations were suitable for use in remedial design (RD) for the SIL. As part of this study PGG performed a comparative analysis of those results with existing data from other studies. This memo describes PGG's inter-method and inter-laboratory evaluation for determining if there was any evidence of bias in the PCB sampling results obtained by US Environmental Protection Agency (EPA) method 8082A for Aroclors.

During the course of PGG's review of third-party validated data collected as part of DTNA's 2018 sediment investigation (PGG 2019a) and de maximis 2018 Head of the SIL Sediment Characterization (PGG 2019b), PGG observed low bias in Aroclor totals from TestAmerica Seattle relative to PCB congener totals for split and co-located samples. EPA's *Draft Remedial Design Guidelines and Considerations, Portland Harbor Superfund Site, Portland, Oregon* (EPA 2020) states that Aroclor and congener methods for estimating total PCB concentrations in sediments can be used interchangeably in some instances. The accuracy of the Aroclor results are important for the purpose of comparing them to threshold concentrations of the PHSS Remedial Action Level (RAL) of 75 micrograms per kilogram (ug/kg) or Cleanup Level (CUL) (9 ug/kg) (EPA 2019). In particular, the use of low-biased total PCB results in RD for the SIL (and for the rest of the PHSS) could lead to underestimating the extent of PCB contamination and produce a remedy that would not meet the Record of Decision's remedial action objectives.

For the purpose of this evaluation, PGG performed an inter-method comparison of total PCBs between EPA method 8082A (Aroclors) and EPA Method 1668A (congeners) using Remedial Investigation (RI) data for SIL from homogenized split sediment samples; DTNA and de maximis homogenized split sediment samples analyzed at TestAmerica (Seattle) (Aroclors) and TestAmerica (Knoxville) (congeners); and DTNA homogenized split sediment samples analyzed at Analytical Resources, Inc. (ARI) (Tukwila) (Aroclors) and TestAmerica (Knoxville)

(congeners). PGG also performed an inter-laboratory comparison of total PCBs between EPA method 8082A (Aroclors) that were analyzed by TestAmerica (Seattle) and ARI (Tukwila) from DTNA's homogenized split sediment samples and composited sample results. The data sets used for this evaluation are further discussed in Section 2.0 and the methods of comparison are provided in Section 3.0 of this memorandum.

Based on evaluation of five sample delivery groups (SDGs), PGG found that the TestAmerica (Seattle) PCB Aroclor results suffer from a statistically significant negative (low) bias relative to PCB congener results for the same samples. More specifically, PGG's analysis has found that, on average, the TestAmerica (Seattle) PCB Aroclor results are about six times lower than split total PCB congener results. In contrast, PGG determined that there was no bias between RI Aroclor and congener results and no bias between TestAmerica PCB congener results and ARI PCB Aroclor results. PGG's comparative analysis of homogenized split sediment samples found that the false negative rate was 78% at the RAL (75 ug/kg) and 100% at the Principal Threat Waste (PTW) threshold (200 ug/kg). Consequently, PGG has determined that most of the total PCB Aroclor concentrations reported by TestAmerica as below the RAL (75 ug/kg) are reported as above the RAL for total PCB congener concentrations.

Therefore, PGG has determined that there is low to no confidence that TestAmerica total PCB Aroclor concentrations below the RAL are true negatives, and it is very likely that many of these negatives have true values above the RAL. Moreover, when TestAmerica's total PCB Aroclor concentrations are shown to be above the RAL there is good confidence that the true value is also above the RAL even though the concentrations are likely biased low. These results are discussed in Section 4.0.

False negatives can result in inaccurate RD decision-making, in Section 5.0 we provide a list of recommendations for use of existing PCB data in RD for the SIL. Specifically, we recommend that all TestAmerica (Seattle) Aroclor results be excluded from SIL data sets. The issues identified are not unique to SIL samples and likely extend to other TestAmerica (Seattle) Aroclor data such as in the PDI data set.

1.0 BACKGROUND

The purpose of this inter-method and inter-laboratory comparison is to determine whether the TestAmerica (Seattle) Aroclor results from DTNA and de maximis investigations are suitable for use in RD.

In the DTNA and de maximis data sets, PGG observed disagreement between the TestAmerica total Aroclor and total congener results for the co-located and split sediment samples. This observation runs counter to the conclusions from Lower Willamette Group's (LWG's) Draft RI comparative analysis of Aroclors and congeners (Integral 2011). That report found "measured total PCB concentrations are fairly comparable between methods in most cases (especially when measurement error is considered)." The LWG report, as presented in Appendix D1.4 of the RI report (EPA 2016), is the basis of EPA's draft RD guidance statement that Aroclor and congener methods can be used interchangeably if reporting limits are below the Cleanup Level (CUL) of 9 ug/kg (EPA 2020). See Figure 1 below reproduced from the Integral 2011 report.

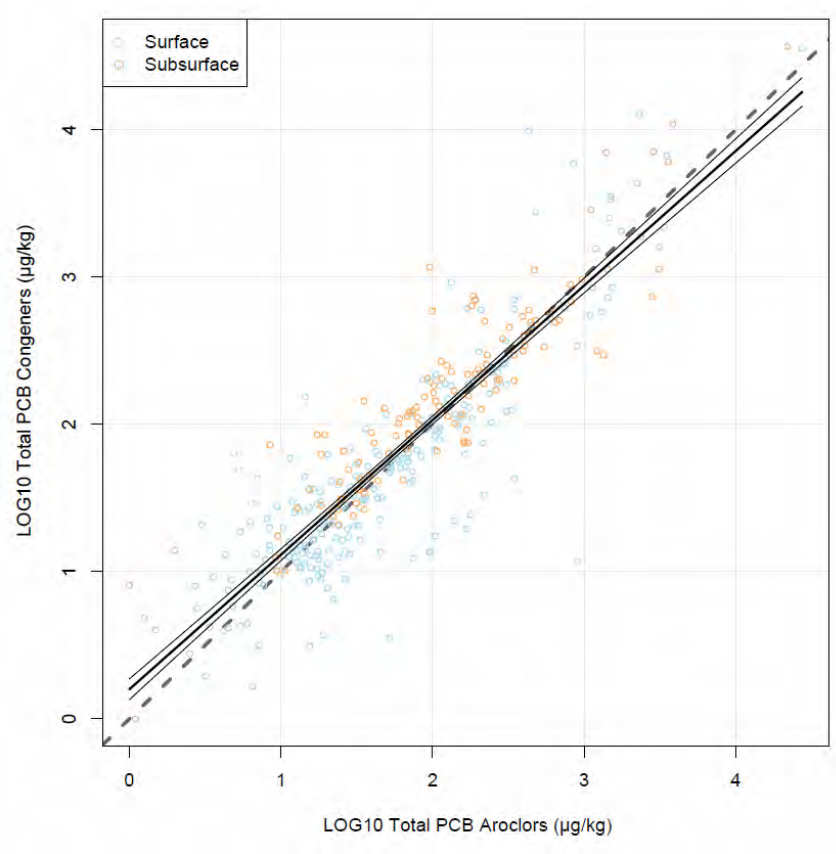

Figure 1. Comparison of total PCBs for Portland Harbor Remedial Investigation data (From Integral 2011 and EPA 2016). The 45-degree line (1:1 line) is shown dashed, and the solid lines show the regression fit line and 95% confidence intervals. Note that the data are log-transformed "to satisfy the assumptions of normality for linear regression."

PGG's scrutiny of the Aroclor data at this time, prior to RD, is timely for a number of reasons, including the following:

1) EPA's draft RD guidance (EPA 2020) states Aroclor and congener methods can be used interchangeably when Aroclor reporting limits are below the CUL (9 ug/kg) (EPA 2020).

2) The Pre-Remedial Design Group (Pre-RD Group) used the same laboratories as the DTNA and de maximis studies for both PCB methods (TestAmerica Seattle and Knoxville for Aroclors and congeners, respectively).

3) The absence of paired Aroclor and congener results (e.g. from homogenized split samples) in the Pre-RD Group's 2018 Portland Harbor Pre-Remedial Design Investigation (PDI) means the trueness of their TestAmerica Aroclor results in SIL cannot be directly verified using split congener results.

4) There are 10 sample delivery groups (SDGs) of PCB Aroclors from TestAmerica (Seattle) with SIL sediment samples across all three investigations (i.e. PDI, DTNA, and de maximis), allowing for data quality issues to be address within RD Sampling and Analysis Plans.

2.0 DESCRIPTION OF DATA SETS

This memo presents a comparative analysis that relies on three SIL data sets:

- SIL data from the RI Database (2016-02-08 Portland Harbor RI Appendix A3_RI-Dataset_RA-SummedParams.accdb, EPA 2016, Appendix A)
- DTNA's 2018 SIL Sediment Investigation (PGG 2019a and PGG 2021)
- de maximis 2018 Head of SIL Sediment Investigation (PGG 2019b)

The RI data for SIL were queried from the RI database for samples analyzed for both Aroclors and congeners. These data were collected between 2004 to 2008 as part of LWG's Round 2 and Round 3 investigations. Columbia Analytical Services in Kelso, WA (CAS now dba ALS Global) analyzed the bulk of the samples for PCB Aroclors.

The DTNA and de maximis data were collected in fall 2018 as part of two different SIL investigations (PGG 2019a and 2019b). Both of those data sets have been submitted to and approved for use in RD by EPA. The investigations closely followed the sampling and analysis protocols laid out in the Pre-Design Investigation plans (AECOM and Geosyntec 2018a-c). Accordingly, DTNA and de maximis used the same analytical laboratories as PDI. DTNA's sediment Sampling and Analysis Plan (SAP) provided for a second phase of sediment sample analyses from archived samples (PGG 2018). Data from this second phase of analyses are included here as well (PGG 2021).

As mentioned above, PGG's comparative analysis does not include data from Pre-RD Group's 2018 Portland Harbor Pre-Remedial Design Investigation (PDI) due to the absence of paired Aroclor and congener results (e.g. from homogenized split samples).

Note that the RI data set summation rules treat non-detects as zero concentrations. Whereas the post-ROD data summation rules, used for DTNA and de maximis data sets per EPA RD Guidance (EPA 2020), add to the detects half of the single highest non-detect value. These minor data summation differences do not affect the comparative analysis within a data set (e.g. RI database total Aroclors compared to total congeners.)

These data sets are included in Attachment A Tables A1-A4.

3.0 METHODS

PGG performed the following comparative analyses:

1) An inter-method comparison between PCBs by EPA method 8082A (Aroclors) and EPA Method 1668A (congeners) using

    a. RI data for SIL from homogenized split sediment samples (n = 44).

    b. DTNA and de maximis homogenized split sediment samples analyzed at TestAmerica (Seattle) (Aroclors) and TestAmerica (Knoxville) (congeners) (n = 57).

c. DTNA homogenized split sediment samples analyzed at Analytical Resources, Inc. (Tukwila) (Aroclors) and TestAmerica (Knoxville) (congeners) (n = 11).

2) An inter-laboratory comparison of total PCBs between EPA method 8082A (Aroclors) analyzed by TestAmerica (Seattle) and ARI (Tukwila) from DTNA's homogenized split sediment samples and composited sample results (n = 33).

We evaluated the paired samples for inter-method agreement using a handful of statistical methods including scatter plots with Lin's concordance correlation coefficient (CCC) (Lin 1989 and Lin et al. 2000) and Bland-Altman plots to evaluate a bias. Use of linear regressions and correlation coefficients (r^2 values) for this type of comparison is not advisable because it can lead to incorrect interpretations (e.g. Lin 1989) due to shifts in location or scale (Figure 2). Note, the inter-method comparison by Integral (2011) used a linear regression of log-transformed data, reported the r^2, and qualitatively described the scale shift.

We similarly plotted the data on scatter plots to show the observed relationship of total PCB Aroclor and congener concentrations. We then calculate Lin's CCC for agreement, which combines measures of both precision and accuracy to show how far the observed data deviate by location or scale shifts from the line of perfect concordance (that is, the line at 45 degrees on a square scatter plot) (Figure 2). Lin's CCC ranges from 0 to 1, increasing as a function of the accuracy and precision of the data. Lin's CCC does not describe the fine structure of agreement and disagreement, which is inspected using Bland-Altman plots. We perform the Lin's CCC calculation using the epi.ccc function implemented in the epiR R package (Stevenson et al 2013).

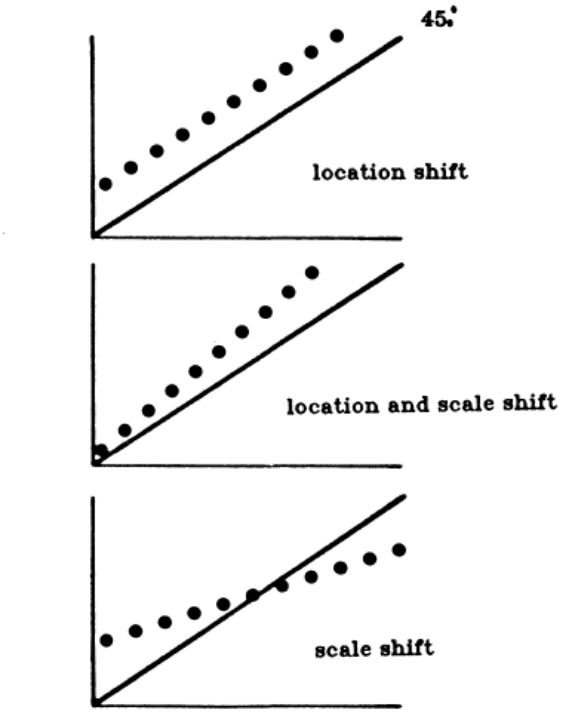

Figure 2. Lin's concordance coefficient, unlike Pearson's coefficient, considers location and scale shifts away from the 45-degree line (1:1 line) (From Lin (1989)).

We use qualitative guidelines for reliability measures by Cicchetti (1994) to describe Lin's coefficient for the method and each analyte:

- Less than 0.40 - poor
- Between 0.40 and 0.59 - fair
- Between 0.60 and 0.74 - good
- Between 0.75 and 1.00 - excellent

In Figure 3 (below) we use Bland-Altman plots (Altman and Bland 1983, Bland and Altman 2000) to graphically compare inter-method and inter-laboratory agreement. Bland-Altman plot analysis is a simple way to evaluate a bias between the mean differences between two methods and show differences between the pairs of readings (Giavarina 2015). Bland-Altman plots may show a pattern (e.g. increasing difference with concentration) or extent of the agreement (e.g. no agreement near the detection limit) (Figure 3).

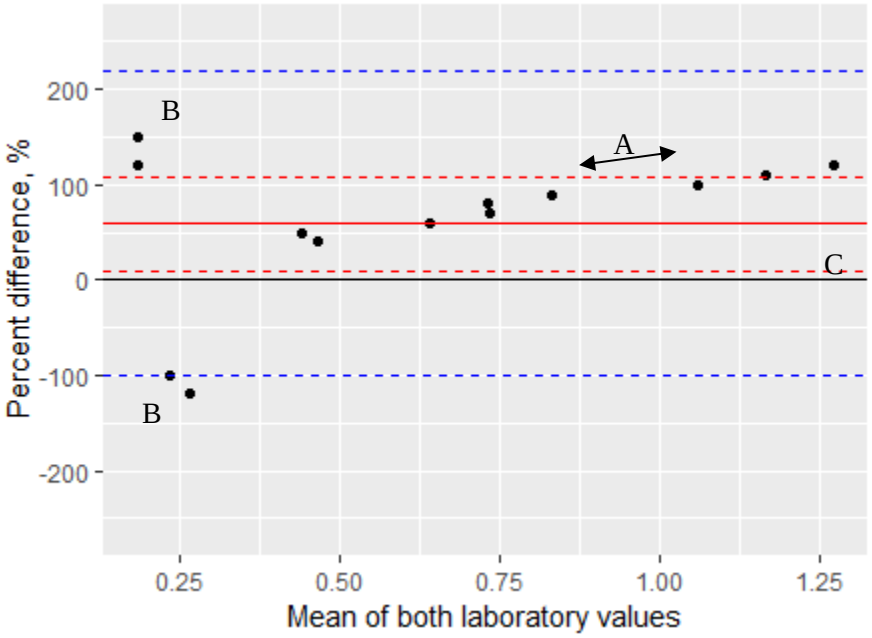

Figure 3. Example Bland-Altman plot showing A) a pattern of increasing percent difference with concentration, B) poorer agreement at low concentrations (e.g. near a detection limit), and C) significant positive bias. The plot shows observed percent difference (black circles), mean percent difference (red line) with 95% confidence interval (CI) (dashed red lines), and limits of agreement (LOA) (dashed blue line).

The mean of the paired differences (red line in Figure 3) tells us whether, on average, one method tends to underestimate or overestimate measurements relative to the measurements of the second method, which constitutes a bias between the methods for this study.

Typically, the x-axis values will be the mean of the compared results or the reference standard. Conventionally, PCB congener method 1668A is considered the "gold standard" method. EPA prefers PCB congeners analysis for sediment samples because it is "is less affected by

"weathering," non-PCB interferences, uncertainties associated with mixing of PCB sources, and subjective Aroclor identifications" (EPA 2019). Accordingly, PGG compared the percent difference (y-axis values) to the congener measurement rather than the average of both methods per sample pair (x-axis values). When interpreting the bias, the bias is statistically significant only if the line of zero difference is not within the 95% confidence limits of the bias (mean difference) as shown in Figure 3 above at "C". In all cases, PGG either confirmed or was unable to confirm the significance (p-value < 0.05) using paired Wilcoxon signed rank test, reporting the p-value for significant cases of bias. For each Bland-Altman plot PGG also reported the calculated bias and the 95% confidence limits of the bias.

4.0 RESULTS

4.1 INTER-METHOD COMPARISON BETWEEN PCBS BY EPA METHOD 8082A (AROCLORS) AND EPA METHOD 1668 (CONGENERS)

For each inter-method comparison, PGG showed scatter plots with Lin's Concordance Correlation Coefficient (CCC) to evaluate agreement and use Bland Altman plots to evaluate bias.

For each data set PGG illustrates a set of four different scatter plots (1) data with no modifications (upper left); (2) log-transformed data (upper right); (3) high concentrations above 2000 ug/kg total Aroclors removed (lower left); and (4) high concentrations above 750 ug/kg total Aroclors removed (lower right).

For consistency with the Integral 2011 analysis (Figure 1), PGG shows the data log transformed and found that the untransformed data more informative here because the absolute error (rather than proportional error) is of more practical importance for data uses such as interpolation (e.g. natural neighbor method), which was used to define Sediment Management Area (SMA) boundaries in the ROD (EPA 2017) and to calculate spatially weighted average concentrations or surface weighted average concentrations (SWACs).

Integral and EPA have described in the RI dataset that the Aroclor to congener overprediction/underprediction occurs around 750 ug/kg total Aroclors:

"*In addition, the analysis of sediment data indicated that total Aroclor data overpredict total PCB congeners in concentrations below ~750 µg/kg total Aroclors and may result in underprediction above this threshold.*" (Integral 2011)

"*The analysis of sediment data collected during the RI indicated that total Aroclor data overpredict total PCB congeners in concentrations below ~750 µg/kg total Aroclors, which should result in similar or more conservative site management decisions.*" (EPA 2019)

Accordingly, we evaluate this effect for all comparisons by using the 750 ug/kg and the 2000 ug/kg total PCBs as thresholds.

Note that the Lin's CCC does not assume the data are normally distributed. However, concordance correlation is like Pearson correlation in that it can be sensitive to skewness, long tails, and outliers.

We, therefore, show four different data treatments for Lin's CCC and 2 treatments for the Bland-Altman plots.

4.1.1 LWG split sediment samples located in SIL from the RI database

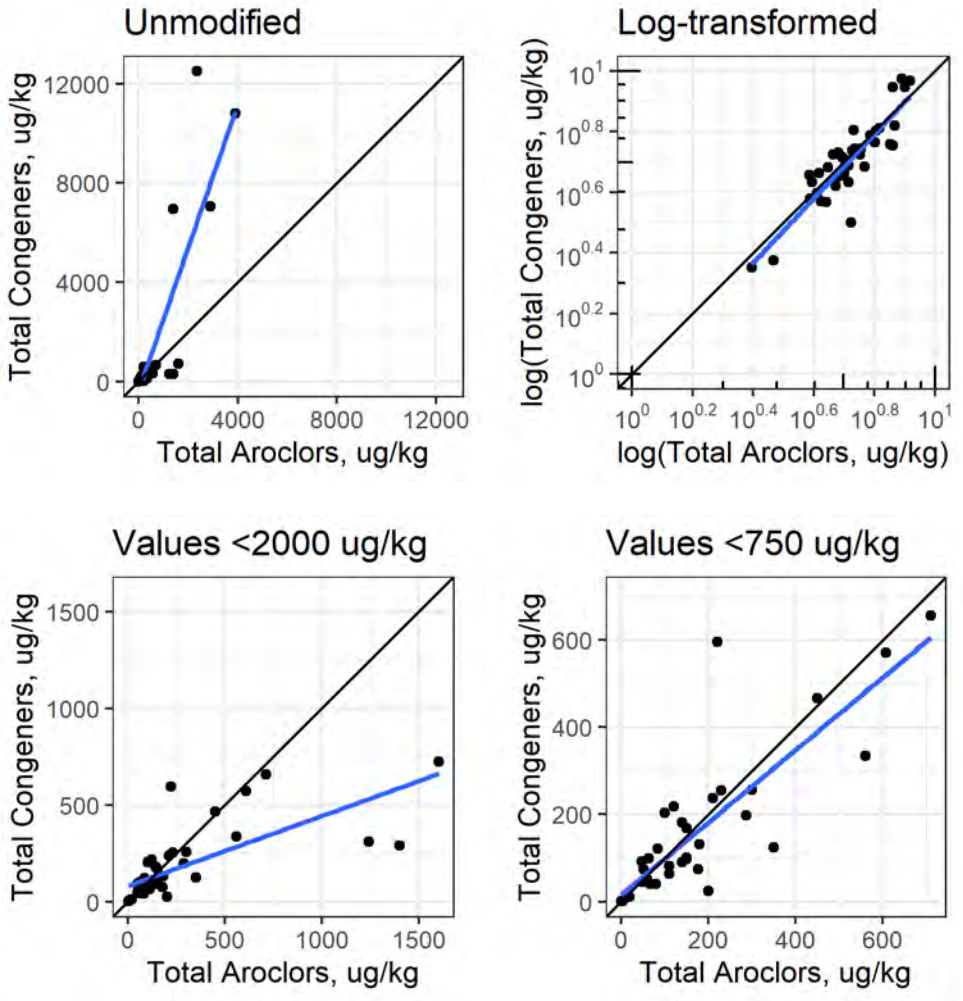
For the RI data in SIL (n = 44) we find the best agreement between total Aroclors and congeners when concentrations above 750 ug/kg total Aroclors are removed (Figure 4 and Table 1); the location shift is close to zero (-0.07), the scale shift near parity (0.99), and bias factor of 1 indicating no deviation from the 45-degree (1:1) line. The CCC metrics indicate reasonable interchangeability of the two analytical methods up to concentrations of ~750 ug/kg, as Integral and EPA observed for the full RI data set.

The Bland-Altman plots provide another comparison that can be used to evaluate bias between two methods. The Bland-Altman plots show the absolute difference vs. total congener concentration for the paired samples analyzed by TestAmerica (TA) (Seattle and Knoxville). The Bland-Altman plots show that there is no statistically significant bias between PCB methods (Figure 5). The line of zero difference is within the 95% level of confidence on the mean percent difference.

Table 1. Method Agreement Metrics for Total Aroclors and Total Congeners in SIL using RI Data

Data Treatment	Lin's CCC [95% CI]	Agreement Quality	Location Shift	Scale Shift	Bias Factor
unmodified	0.46 [0.37,0.53]	poor - fair	0.36	3.35	0.53
log-transformed	0.93 [0.88,0.96]	excellent	-0.07	1.15	0.99
values <2000 ug/kg	0.55 [0.38, 0.69]	poor-good	-0.32	0.51	0.78
values <750 ug/kg	0.84 [0.71,0.91]	good-excellent	-0.07	0.99	1.00

Lin's CCC = concordance correlation coefficient with 95% confidence interval [CI]. Agreement Quality from Cichetti (1994)



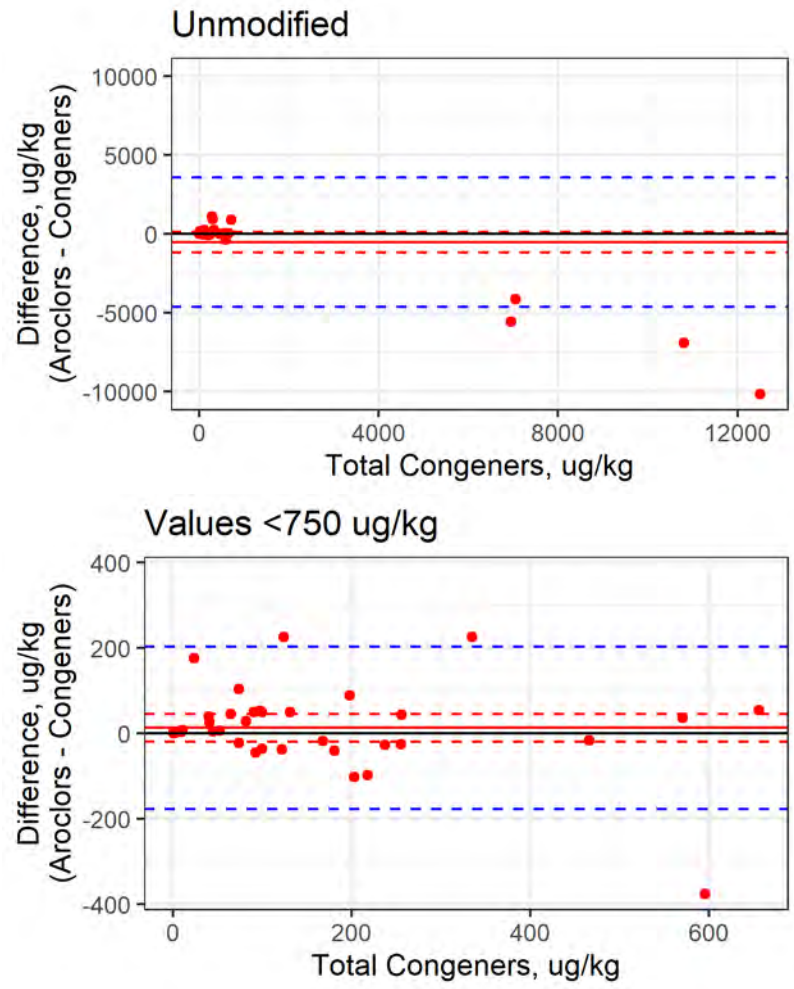


Figure 4. Scatter plots of observed RI PCB data in SIL with lines of best fit (blue) for four different data treatments. The unmodified data (top left) shows the line of best fit is shifted by the 4 highest total congener values. The log-transformed data (top right) have better agreement. Removal of high concentration data (bottom left and right), 4 highest total congener (> 2000 ug/kg) and 3 additional total Aroclor values (> 750 ug/kg), shows the best agreement for concentrations below 750 ug/kg.

No bias (n = 44):
-531 [-1169, 107 (95% CI)] ug/kg

No bias (n = 37):
13 [-20, 45 (95% CI)] ug/kg

Figure 5. Bland-Altman plots of absolute difference (total Aroclors – total congeners) vs. total congener concentration for RI data in the SIL with two data treatments: unmodified (top) and removing n = 7 values greater than 750 ug/kg (Bottom). The mean difference (solid red line) with 95% CI (dashed red) indicate the bias, while the limit of agreement (1.96*standard deviation) (blue dashed line) indicate the range within which approximately 95% of the difference are included. Because the zero difference is within the 95% level of confidence on the mean difference (red dashes) there is no statistically significant bias between methods in the RI data set.

4.1.2 TestAmerica Aroclors vs. TestAmerica Congeners

Next, we evaluate the homogenized split sediment samples from the DTNA (PGG 2019a and 2021) and de maximis investigations (PGG 2019b) analyzed for Aroclors by TestAmerica (Seattle) and PCB congeners by TestAmerica (Knoxville) (n = 57).

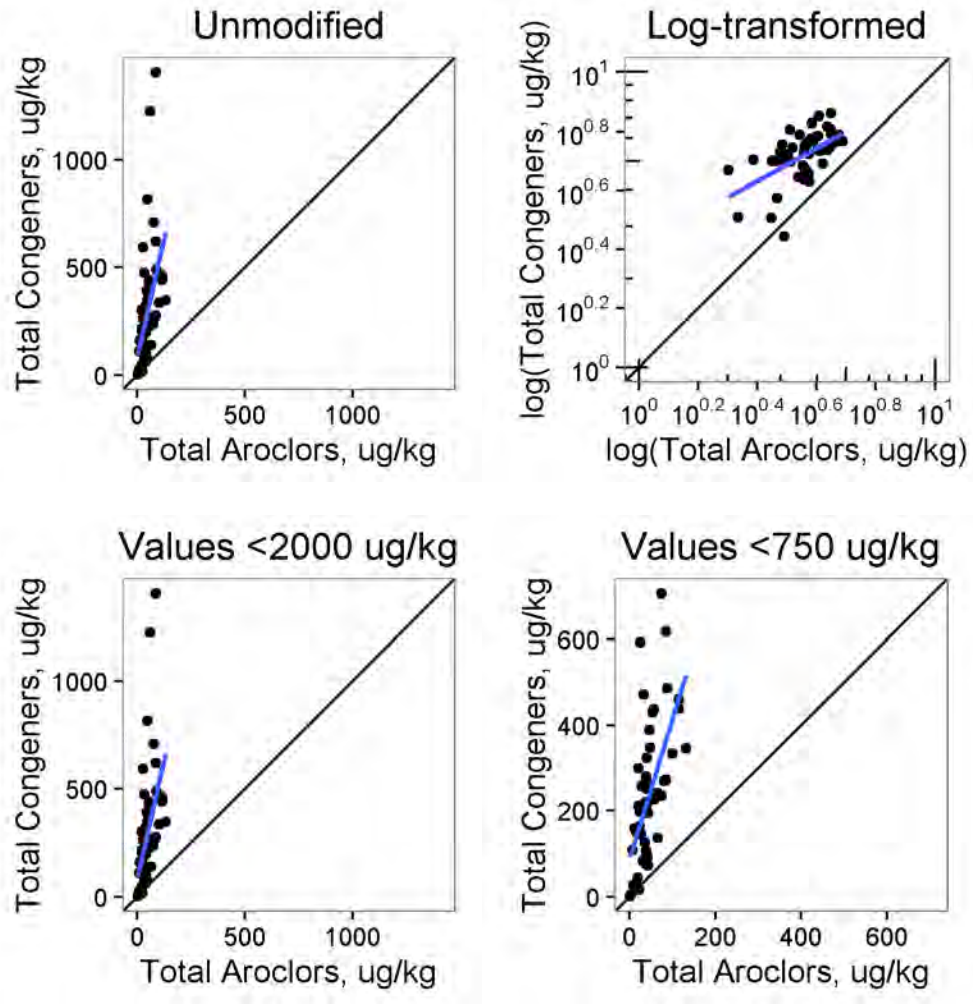
For this data set, we find poor agreement between total Aroclors and congeners for all the 4 different data treatments (unmodified, log-transformed, and removing high concentrations) (Figure 6 and Table 2). The large location shifts (1.65 – 2.69) and the scale shifts greater than one (1.43 – 9.11) indicate a systematic shift away from the line of agreement. These shifts can clearly be observed as relatively lower total Aroclors versus total congeners.

The Bland-Altman plots show that the total Aroclor results are systematically low-biased compared to total congeners (Figure 7). Both data treatments, unmodified and removing high values > 750 ug/kg, show there is statistically significant bias between methods. This bias is confirmed to be statistically significant using Wilcoxon signed rank test for both data treatments (p-values = 6.535e-11 and 2.093e-10, respectively). TestAmerica total Aroclor results are biased low on average -235 and -188 ug/kg (-71 and -70 percent difference), for the two data treatments, relative to the total congener results.

Table 2. Method Agreement Metrics for Total Aroclors and Total Congeners in SIL Analyzed by TestAmerica

Data Treatment	Lin's CCC [95% CI]	Agreement Quality[1]	Location Shift	Scale Shift	Bias Factor
unmodified	0.06 [0.03,0.09]	poor	2.69	9.11	0.12
log-transformed	0.34 [0.23,0.44]	poor-fair	1.57	1.48	0.43
values <2000 ug/kg	0.06 [0.03,0.09]	poor	2.69	9.11	0.12
values <750 ug/kg	0.09 [0.05,0.13]	poor	2.74	5.53	0.15

[1] Agreement Quality listed is for the 95% Confidence Interval. [a] – 'values < 2000 ug/kg' are the same data as 'unmodified' for this data set.



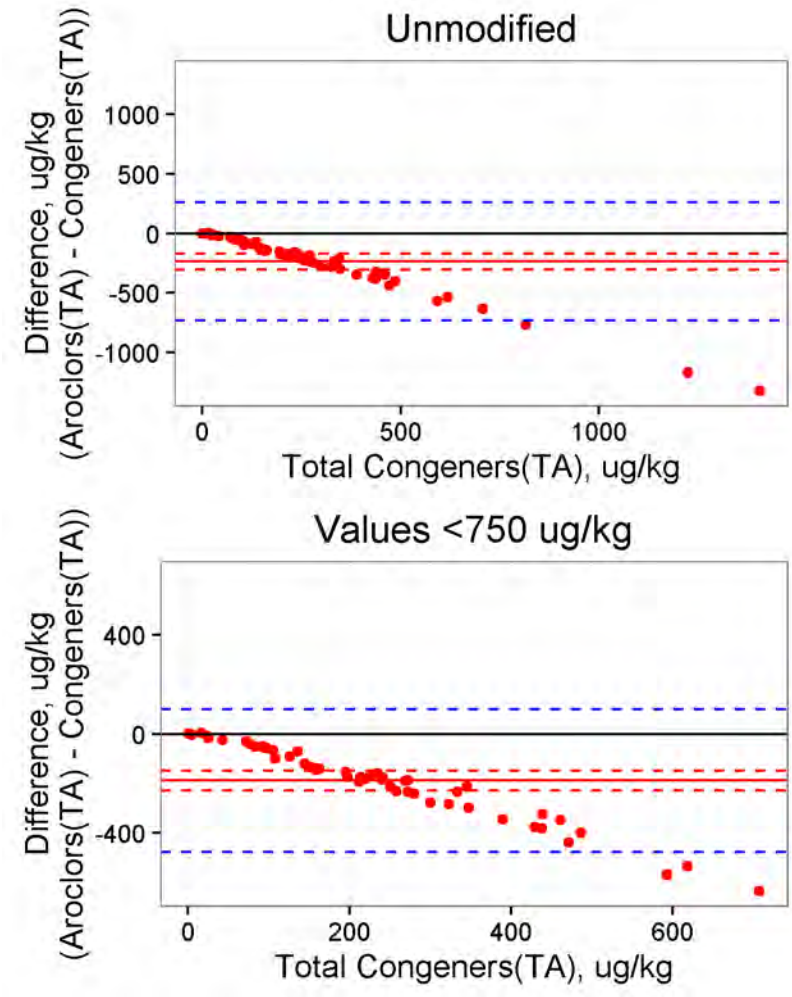


Figure 6. Scatter plots of TestAmerica generated PCB data in SIL with lines of best fit (blue) for four different data treatments. The unmodified data (top left) shows the line of best fit is location- and scale-shifted with poor agreement between the methods. The log-transformed data (top right) and removal of 3 total congener values > 750 ug/kg (bottom right) also have poor agreement. Note that the unmodified and values < 2000 ug/kg data sets (bottom left) are the same because no values are greater than 2000 ug/kg.

Aroclor negative bias (n = 61):
-235 [-302, -168 (95% CI)] ug/kg,

Aroclor negative bias (n = 58):
-188 [-228, -147 (95% CI)] ug/kg

Figure 7. Bland-Altman plots of absolute difference (total Aroclors – total congeners) vs. total congener concentration for TestAmerica generated PCB data in SIL with two data treatments: unmodified (Top) and removing n=3 values greater than 750 ug/kg (Bottom) makes little difference to the interpretation. Both data treatments show there is statistically significant bias between methods, where TestAmerica total Aroclor results are negatively biased (-235 and -188 ug/kg, on average) relative to the total congener results. The mean difference (solid red line) with 95% CI (dashed red) indicate the bias, while the limit of agreement (1.96*standard deviation) (blue dashed line) indicate the range within which approximately 95% of the difference are included.

4.1.3 ARI Aroclors vs. TestAmerica Congeners

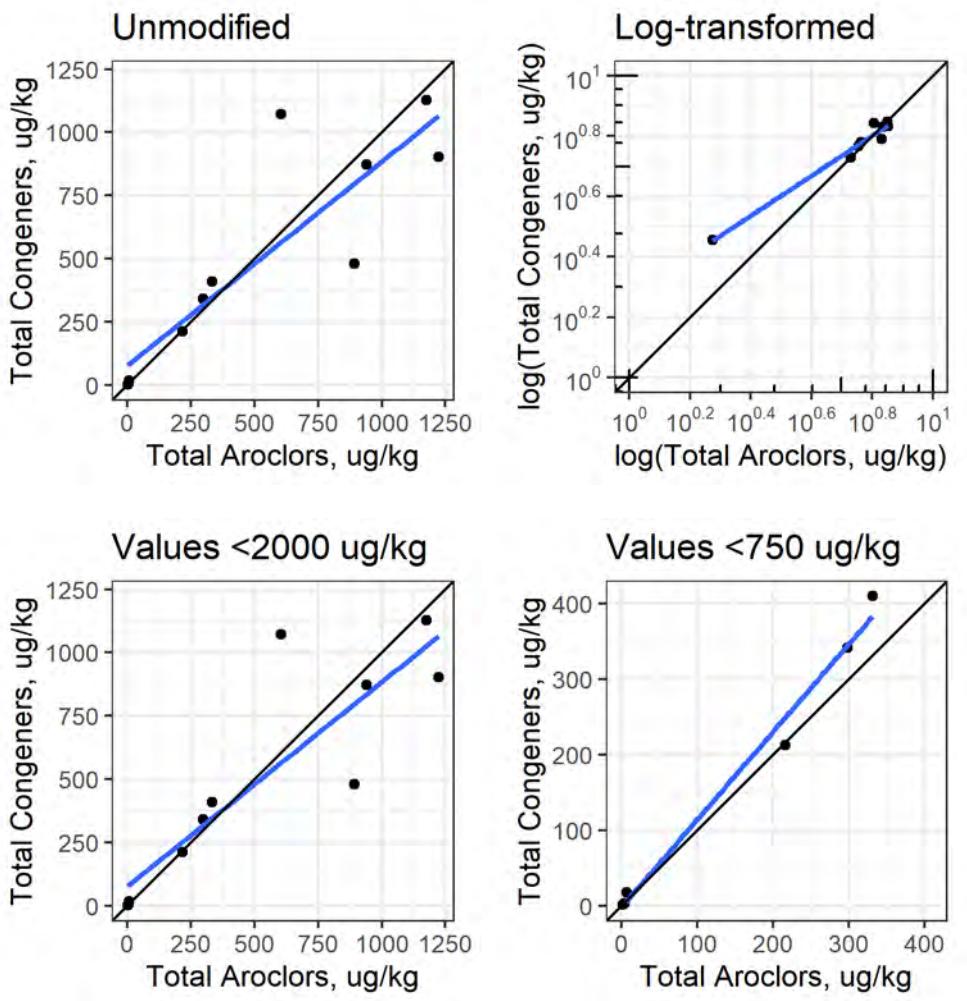
We evaluated the homogenized split sediment samples from the DTNA (PGG 2019a and 2021) analyzed for Aroclors by ARI (Tukwila) and PCB congeners by TestAmerica (Knoxville) (n = 11). Although this data set is smaller than those presented above, there is good to excellent agreement between total Aroclors and congeners for all the 4 different data treatments than for the TestAmerica Aroclor to congener comparison (Section 4.1.2) (Table 3 and Figure 8). And in this data set there are no indications of systematic bias as shown in the Bland-Altman plots (Figure 9).

Lin's CCC for the ARI Aroclor to TestAmerica congener comparison is similar to the RI data set for both the log-transformed (0.98 vs. 0.93) and total PCBs less than 750 ug/kg (0.97 vs. 0.84) data treatments. Although the ARI data set is small (n = 11) and limited to homogenized split samples from one core location, the good-excellent agreement between PCB methods supports EPA's assessment that Aroclor analysis can be reliably used to meet RD Data Quality Objectives. Overall, the mean difference between methods for values < 750 ug/kg is small (-20 ug/kg) and is not statistically significant. Note that inclusion of 3 additional co-located samples results improves the agreement suggesting the agreement finding for ARI is robust.

Table 3. Method Agreement Metrics for Total Aroclors analyzed by ARI and Total Congeners Analyzed by TestAmerica in SIL sediments

Data Treatment	Lin's CCC [95% CI]	Agreement Quality[1]	Location Shift	Scale Shift	Bias Factor
unmodified	0.88 [0.61,0.96]	good-excellent	-0.05	0.92	0.99
log-transformed	0.98 [0.93,1]	excellent	-0.002	1.01	1.00
values <2000 ug/kg[a]	0.88 [0.61,0.96]	good-excellent	-0.05	0.92	0.99
values <750 ug/kg	0.97 [0.9,0.99]	excellent	0.13	1.17	0.98

[1] Agreement Quality listed is for the 95% Confidence Interval. [a] – 'values < 2000 ug/kg' are the same data as 'unmodified' for this data set.



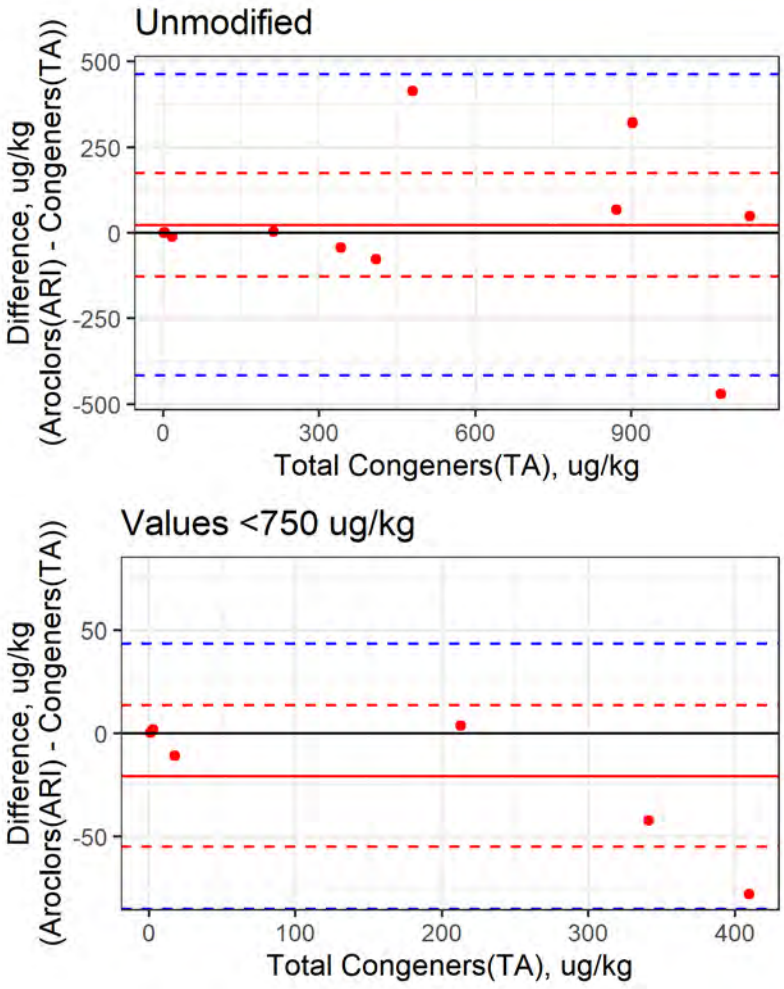


Figure 8. Scatter plots of paired ARI Aroclor and TestAmerica congener data in SIL with lines of best fit (blue) for four different data treatments. The unmodified data (top left) and values < 2000 ug/kg (bottom left) show the line of best fit is scale- but not location-shifted. The log-transformed data (top right) also suggests some scale shift but not location shift. The unmodified and values < 2000 ug/kg data sets are the same because all values are less than 2000 ug/kg.

Aroclor no bias (n = 11):
23 [-127, 174 (95% CI)] ug/kg

Aroclor no bias (n = 6):
-20 [-55, 14 (95% CI)] ug/kg

Figure 9. Bland-Altman plots of absolute difference (total Aroclors – total congeners) vs. total congener concentration for ARI Aroclor and TestAmerica PCB congener data in SIL with two data treatments: unmodified (top) and removing values greater than 750 ug/kg (bottom) both show no statistically significant bias. The data treatment makes little difference to the interpretation. ARI Aroclors provide unbiased results relative to the TestAmerica congener results. The mean difference (solid red line) with 95% CI (dashed red) indicate the bias, while the limit of agreement (1.96*standard deviation) (blue dashed line) indicate the range within which approximately 95% of the difference are included.

4.2 INTERLABORATORY COMPARISON OF AROCLOR DATA FOR ARI AND TESTAMERICA, SEATTLE

Last, we evaluated the DTNA sediment samples analyzed for Aroclors by ARI and TestAmerica (Seattle). Based on the foregoing results from Section 4.1, we would expect poor agreement between TestAmerica and ARI total Aroclor results, with TestAmerica results biased low.

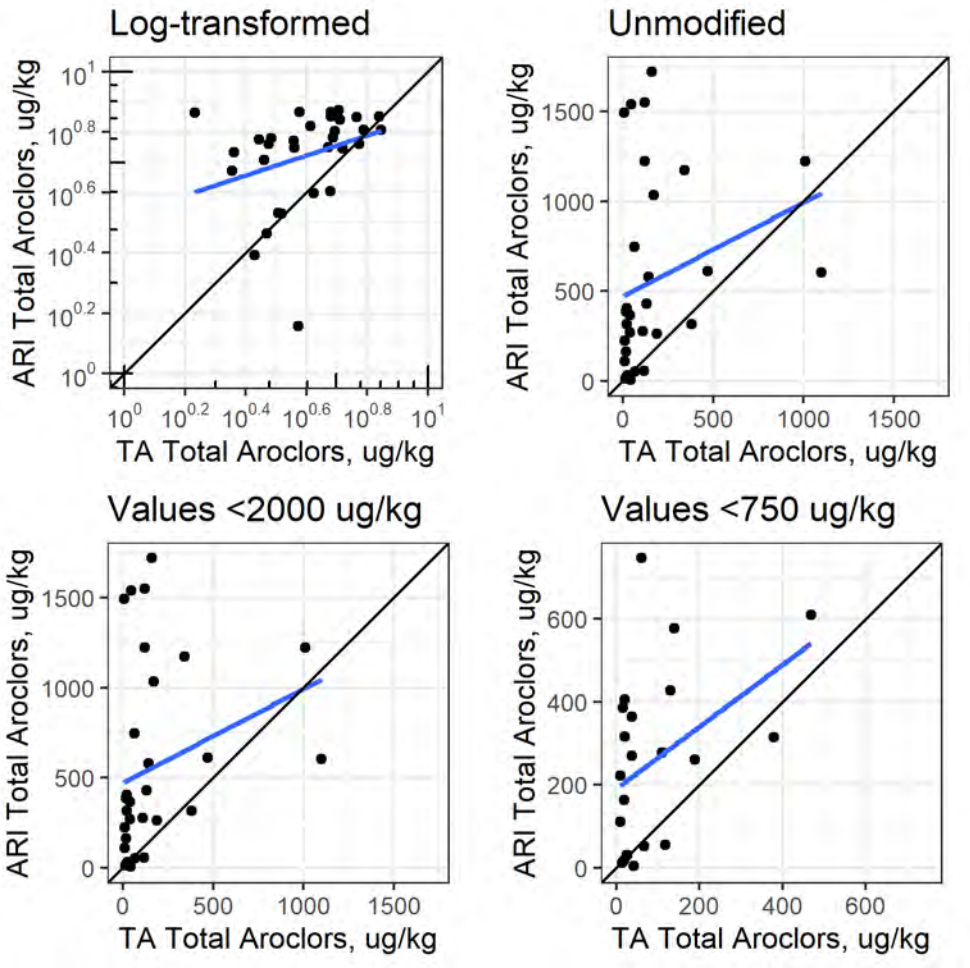
Unlike the other data sets analyzed in Section 4.1 above, this data set includes a combination of homogenized splits, and composited results (Attachment A, Table A4). To create a comparable data set of spanning the same core interval, some ARI results are weighted averages of samples. For example, a 2-4 ft sample analyzed at TestAmerica (Seattle) is compared with the average of results for 2-3 ft and 3-4 ft samples analyzed at ARI. Of the n = 31 results in the paired data set, 15 of ARI results are averages of 2 intervals. One pair is the average of two TestAmerica results corresponding to the average of three ARI results.

Consistent with the analysis presented in Sections 4.1.2 and 4.1.3, there is poor agreement as indicated by Lin's CCC between the TestAmerica Seattle and ARI total Aroclor results, regardless of data treatment (Table 4 and Figure 10). This disagreement is due to the substantial negative bias observed in the TestAmerica Aroclor results as documented in Section 4.1.2. Again, this bias illustrated on the Bland-Altman plots (Figure 11) is confirmed using Wilcoxon signed rank test for both data treatments (p-values = 4.005e-05 and 0.0009413, respectively). The systematic negative bias has a mean difference of -393 and -168 ug/kg for the unmodified and values < 750 ug/kg, similar to the mean bias observed between TestAmerica total Aroclors and total congeners (-235 and -188 ug/kg).

Table 4. Method Agreement Metrics for Total Aroclors analyzed by ARI and TestAmerica in SIL sediments

Data Treatment	Lin's CCC [95% CI]	Agreement Quality[1]	Location Shift	Scale Shift	Bias Factor
unmodified	0.14 [-0.06,0.33]	poor	1.06	2.03	0.55
log-transformed	0.27 [0.02,0.48]	poor-fair	0.96	1.15	0.68
values <2000 ug/kg[a]	0.14 [-0.06,0.33]	poor	1.06	2.03	0.55
values <750 ug/kg	0.24 [-0.01,0.46]	poor-fair	1.07	1.77	0.57

[1] Agreement Quality listed is for the 95% Confidence Interval. [a] – 'values < 2000 ug/kg' are the same data as 'unmodified' for this data set.



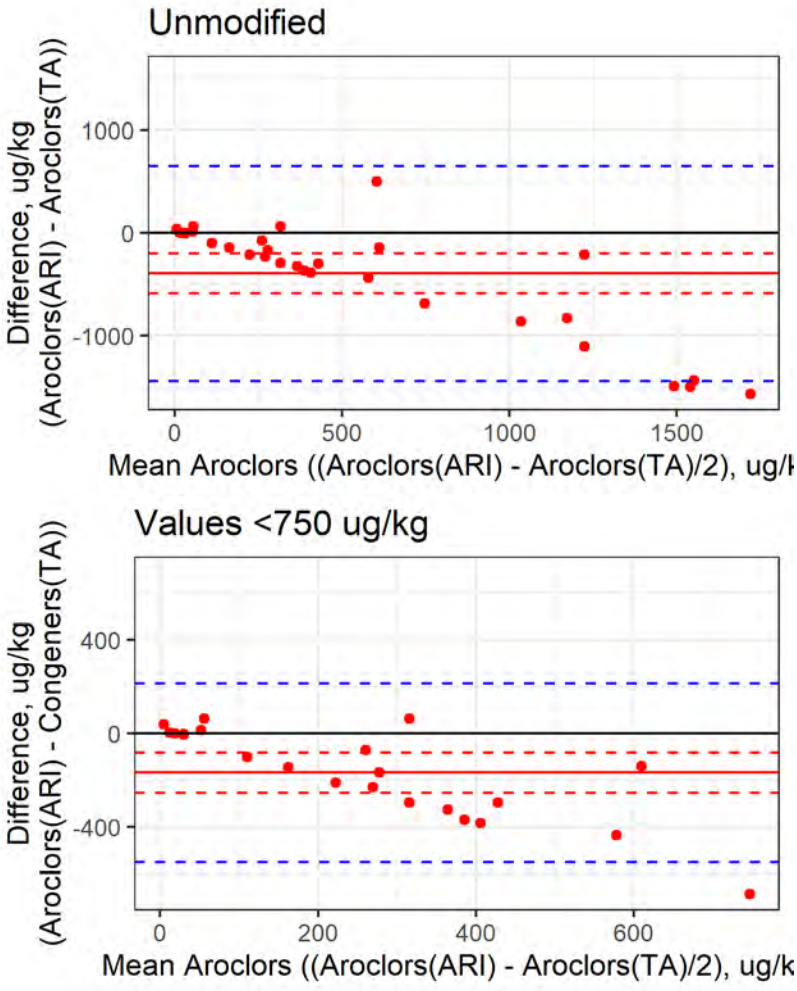


Figure 10. Scatter plots of TestAmerica Aroclor and ARI Aroclor data in SIL with lines of best fit (blue) for four different data treatments. The unmodified data (top left) shows the line of best fit is location and scale shifted with poor agreement between the laboratories. The log-transformed data (top right) and removal of values > 750 ug/kg (bottom right) also have poor agreement. Note that the unmodified and values < 2000 ug/kg data sets (bottom left) are the same because no values are greater than 2000 ug/kg. These results resemble the Figure 5 comparison between TestAmerica Aroclors and TestAmerica congeners.

TestAmerica negative bias (n = 31): -393 [-589, -198 (95% CI)] ug/kg

TestAmerica negative bias (n = 22): -168 [-254, -81 (95% CI)] ug/kg

Figure 11. Bland-Altman plots of absolute difference between TestAmerica and ARI total Aroclors from SIL with two data treatments: unmodified (Top) and removing values greater than 750 ug/kg (Bottom) make little difference to the interpretation. Both data treatments show there is statistically significant bias between methods, where TestAmerica Aroclor results are negatively biased (-393 and -168 ug/kg, on average) relative to the ARI Aroclor results. The mean difference (solid red line) with 95% CI (dashed red) indicates the bias, while the limit of agreement (1.96*standard deviation) (blue dashed line) indicates the range within which approximately 95% of the difference are included. These figures resemble Figure 6 comparison between TestAmerica Aroclors and congeners.

5.0 DISCUSSION AND RECOMMENDATIONS

5.1 DISCUSSION

We find that the TestAmerica (Seattle) PCB Aroclor results in the five SDGs that we evaluated have a statistically significant negative (low) bias relative to PCB congener results for the same samples. On average, the TestAmerica (Seattle) PCB Aroclor results are about six times lower than split total PCB congener results. In contrast, we find no bias between RI Aroclor and congener results as well as no bias between TestAmerica PCB congener results and ARI PCB Aroclor results, which indicates the low bias is not inherent in the Aroclor method EPA 8082A. The comparative analysis showing the low bias of the TestAmerica (Seattle) PCB Aroclor results spans multiple SDGs over time and samples throughout SIL sediment. The comparative analysis indicates the low biased TestAmerica (Seattle) PCB Aroclor results are not due to the sediment samples themselves or the SIL setting and is not inherent in the Aroclor method EPA 8082A.

Incorrect decisions occur from false negatives as well as false positives. Typically, because of uncertainty in unbiased data, some number of false negatives and false positives cannot be avoided but are assessed and controlled through a Data Quality Objectives (DQO) approach to investigation design and sampling (EPA 2006). EPA DQO guidance acknowledges that the potential for decision errors is larger near an Action Level in the so-called "gray region" even for un-biased data due to measurement uncertainty.

For the SIL, incorrect RD decisions such as determining the nature and extent of PCB contamination will occur if low-biased PCB concentrations are used in evaluations of SMAs and SWACs. For example, a false negative occurs when the measured sediment concentration is low biased below a threshold (e.g. RAL) but the true value is above the threshold. In this case, the decision error would be to falsely accept that true sediment concentration is below the RAL threshold. However, with systemically low-biased data, the number of false negative results can be large and the resulting decision errors can be numerous.

In Tables 5 and 6 below, we tabulate an error matrix (aka a confusion matrix) showing the true and false positive rates, and the true and false negative rates relative to the PCB RAL (75 ug/kg) threshold for the RI data set for SIL (Table 5) and SIL TestAmerica Aroclor and congener data set (Table 6). In this analysis, the congener data, which is considered the gold standard, is used for the actual condition and the Aroclor data is used for the predicted condition to assess true and false positive and negative rates.

In the SIL TestAmerica Aroclor and congener data set, there are 37 false negatives. The false negative rate (FNR) is 78% at the RAL (75 ug/kg) and accuracy is 31% compared to FNR of 9% FNR and 84% accuracy for the RI data set. This means that most of the TestAmerica total PCB Aroclor concentrations are below the RAL (75 ug/kg) when the total PCB congener concentrations are above the RAL. Additionally, when PTW (200 ug/kg) is used as the threshold, the FNR increases to 100% for the SIL TestAmerica data set because there are no total Aroclor results above 131 ug/kg (while there are 31 of 57 total congener results above 200 ug/kg).

As a result, there is low to no confidence that TestAmerica total PCB Aroclor concentrations below the RAL are true negatives, and it is very likely that many of these negatives have true values

above the RAL. Because the false positive rate for TestAmerica total Aroclors is low (0%), when TestAmerica total Aroclor concentrations are above the RAL there is good confidence that the true value is also above the RAL even when the concentrations are biased low.

Table 5. Error Matrix for RI Data Set - SIL, values < 750 ug/kg (n = 37)

		Total congener	
		Above RAL	**Below RAL**
Total Aroclors	**Above RAL**	True positive n = 20	False positive n = 4
	Below RAL	False negative n = 2	True negative n = 11

Table 6. Error Matrix for DTNA and de maximis SIL TestAmerica Data Set, values < 750 ug/kg (n = 54)

		Total congener	
		Above RAL	**Below RAL**
Total Aroclors	**Above RAL**	True positive n = 10	False positive n = 0
	Below RAL	False negative n = 37	True negative n = 7

5.2 RECOMMENDATIONS

Our recommendations are as follows for use of existing data:

1. Preferentially use PCB congener results when both Aroclor and congener results are available for a sample.

2. Do not use the low-biased TestAmerica (Seattle) Aroclor results or SDGs evaluated here for RD comparisons to CULs or to RALs or for concentration-based calculations (e.g. surface weighted area concentrations or interpolations).

3. Do not use other TestAmerica (Seattle) Aroclor results for samples in SIL (e.g. PDI results) for RD comparisons to CULs or to RALs or for concentration-based calculations (e.g. surface weighted area concentrations or interpolations) unless it can be demonstrated that those results are not low-biased.

4. Use TestAmerica (Seattle) Aroclor total PCB results that are greater than a threshold (e.g. CULs, RALs, and principal threat waste (PTW)) with discretion to indicate when a sample is above said threshold. However, concentrations should not be used for calculations and interpolations.

For future Aroclor analyses conducted during RD, our recommendations are as follows:

5. Incorporate routine analysis of paired Aroclor and PCB congener samples into the Quality Assurance Project Plan. For example, per laboratory batch of Aroclor results, analyze five percent of samples for congeners.

6. Consider using a sediment-matrix Certified Reference Material (CRM) containing a mixture of two to three Aroclors to evaluate the trueness of the Aroclor method.

7. Analyze future samples for Aroclors at ARI or alternative laboratories where Aroclor results have demonstrated lack of bias based on comparison with PCB congener results.

8. Select the PCB congener method for high concentrations samples when accurate total PCB concentrations are important Data Quality Objectives. Aroclor and congener differences increase when concentrations approach or exceed 1000 ug/kg. Both methods can accurately classify results >750 ug/kg as exceeding the RAL (true positives).

Table A1. Analytical Results (ug/kg) for RI/FS database (Aroclors and Total PCB Congeners)

Sample ID	Aroclor 1016	Aroclor 1221	Aroclor 1232	Aroclor 1242	Aroclor 1248	Aroclor 1254	Aroclor 1260	Aroclor 1262	Aroclor 1268	Total PCB Congeners (calc'd)	Total PCBs Aroclors (calc'd)

J = Reported result is an estimate.

U = Analyte was not detected in sample.

N = Tentatively identified

R = Rejected

NA = not analyzed

PCB = polychlorinated biphenyls

bold indicates result is detected

Note: Calculated results are as provided from the RI/FS Database, shown without qualifiers

Table A2. Analytical Results (ug/kg) for TestAmerica Seattle (Aroclors) and TestAmerica Sacramento (Total PCB Congeners)

PCB = polychlorinated biphenyls

bold indicates result is detected

Calculated results are shown with full precision without qualifiers. Calculated results are the sum of detections plus half the highest non-detect result.

Some total Aroclor values represent combined sample results in order to compare concentrations across the same depth intervals.

MEMORANDUM

TO: Janet Knox (Pacific Groundwater Group [PGG])
Jeff Parker (PGG)

FROM: Raleigh Farlow

DATE: April 20, 2020

SUBJECT: Preliminary Evaluation of SIL PCB/Aroclor Sediment Data Generated by TestAmerica (TA) of Seattle, Washington

Per your request (JP on 3/3/20), a review was performed of the following two documents:

- [Level 4] Laboratory report (excerpt of 1102 pages) from Eurofins TestAmerica, Seattle, Washington, for Polychlorinated Biphenyls (PCBs) dated 08/30/2019 for analytical group (sample delivery group; SDG) 580-88125-(1-21).

- Data Validation Report [7-page report], Pacific Groundwater Group: PH Head of Swan Island Sediments, PCB Aroclors by EPA 8082A performed by EcoChem, Inc. Laboratory analyses of 21 sediments performed by Eurofins TestAmerica Laboratories, Inc., Tacoma, Washington SDG J88125-1 (580-88125-(1-21)).

The purpose of this review was to determine possible causes of apparent consistent low bias in Aroclor (commercial PCB mixtures) results generated by Eurofins TestAmerica (TA) compared to analyses and reporting of results from **a**) [homogenized-composite] split sample analyses performed by TestAmerica, Knoxville, TN, for PCB congeners in Swan Island Lagoon (SIL) sediments, and **b**) a third analytical laboratory (ARI of Tukwila, WA) analyzing and reporting PCBs as Aroclors (EPA Method 8082) on split [Swan Island] sediment samples. The amount of bias in TA total PCB results averages on the order of one-sixth (factor of ~6x) of total PCBs reported by the other two laboratories. This review of these two documents is limited to data generated and reported by TA for a single SDG only (580-88125-(1-21)). No other data sets were evaluated for this assessment. The following are my observations and findings.

Surrogate compound and matrix spike recoveries. A data validation performed by EcoChem noted generally low (lower than method and project specifications) surrogate compound and matrix spike recoveries. That report concluded with an overall assessment of: *Data were estimated due to surrogate and matrix spike accuracy outliers, a matrix spike precision outlier, and dual column confirmation RPD outliers. All data as qualified, are acceptable for use.* A review of surrogate compound recoveries shows a range of 31 – 85% and a mean of 59.6% for tetrachloro-*m*-xylene (TCMX) and 52.6% for decachlorobiphenyl (DCBP) for all samples within this SDG. This is notable since it is unusual to have surrogate recoveries consistently low without occasional excursions greater than 100%. Surrogate compound recoveries greater than 100% are expected in some samples due to presence of overlapping chromatographic peaks and

interfering compounds in complex environmental sample extracts. Also, DCBP recoveries can be expected to exceed 100% in samples reporting presence of selected PCB mixtures, such as Aroclor 1260, since DCBP is a normal constituent or component of these mixtures. It is unusual for reported DCBP surrogate recoveries to be consistently low for environmental samples contaminated with relatively high levels of Aroclor 1260, such as in this data set. Another notable observation is the apparent consistency of recoveries for the two surrogate compounds in half of the samples with a pair-wise correlation coefficient (R) of 0.95. The recoveries for the two surrogate compounds are reported as near the same (similar or near identical) in these samples. If these recoveries are accurate, this would suggest that matrix effects or sample interferences are negligible or near zero since the two surrogates are at opposite ends of the chromatographic profiles of concern and their recoveries are normally not dependent. This may indicate losses in extract volumes during processing/handling.

Extract clean-ups. Environmental sample extracts typically exhibit complex chromatographic profiles and consequently require clean-up steps to minimize interferences from nontarget species to improve confidence in target compound identifications and quantitations. The analytical method employed by TA (EPA Method 8082A) identifies various options for extract clean-up steps to minimize chemical interferences and improve confidence in reported results. The project Data Validation Report identifies sample clean-up procedures as optional, but does not indicate as to whether any clean-up options were employed for this SDG. An inspection of the (TA) laboratory documentation shows that tetrabutylammonium sulfite (TBAS) solution was reportedly used on all but two extracts to remove elemental sulfur (Sx) interferences (EPA Method 3660B). Many chromatographic profiles in this SDG, however, continued to exhibit characteristic interference from elemental sulfur with PCB mixtures or Aroclor profiles. Follow-up inquiries by PGG staff with TA representatives found that strong-acid digestion/oxidation cleanup (EPA Method 3665A) was employed on project extracts, but was not apparent in project documentation. An inspection of sample chromatographic profiles reveals multiple discrete and overlapping peaks present within Aroclor chromatographic profile envelopes that are not all attributed to or characteristic of commercial PCB mixtures. General lack of dual-column comparabilities and confirmation in Aroclor component responses, as exhibited here and noted in the Data Validation and laboratory reports, are likely indicative of chemical interferences. The identification and quantitation of Aroclors in project extracts could further benefit from the use of appropriate and effective clean-up steps (including GPC, silica gel and/or Florisil® chromatographies).

Identification of target analytes. Urban and mixed receiving environments normally show a variety of contaminants, especially in contaminated sediments, due to contributions from multiple sources. Urban-derived sediments with industrial, commercial and storm-water contaminant sources typically exhibit presence of several Aroclors. In other words, several Aroclor mixtures should be expected to be reported in many, if not most, of the project sediment samples. Aroclor analyses performed by ARI resulted in the reporting of multiple Aroclors in many project samples. Identification Summary Forms/Reports (Form X) from TA, however, show only one Aroclor present in 20 of 21 project samples. One sample reported no Aroclor (PCB) detections. An inspection of sample chromatograms clearly reveals more than one Aroclor mixture present in multiple samples (not just one Aroclor as the laboratory report indicates). It appears as though the most prominent Aroclor in a sample is reported while lesser [Aroclor] mixtures are reported as nondetected. This can significantly under-report (bias low)

the total amount of PCBs present. This yields false negative reporting of some Aroclors in project samples. It is difficult to estimate the level of under-reporting or bias present since the TA laboratory documentation selectively presents identification and quantitation summaries for the single positive "hit" and not for the remaining (unreported) target analytes. The lower reporting limits for the nondominant (reported as nondetected) Aroclors are artificially low – they are default limits assuming near-zero signal, when in fact, target analyte signal appears to be present in the chromatograms. For example, a chromatographic profile resembling Aroclor 1260 is evident in sample C4-0to27-100918, but only Aroclor 1254 is identified and reported with an associated concentration. Aroclor 1260 may be up to about one-half of the total PCBs present in sample C4-0to27-100918, but Aroclor 1260 is reported as nondetected. Similarly, the chromatographic profile for Aroclor 1254 is evident in samples G6-0to27-101818, H2-0to30-101218, and M4-0to26-101918 while only Aroclor 1260 is reported and Aroclor 1254 is indicated as nondetected. Characteristic profiles for Aroclor 1254 and 1260 are evident in sample 515-0to26-101918, but only Aroclor 1254 is reported. It is unclear what algorithm is employed for [PCB] mixture identification and quantitation, or if any assessment and interpretation by an "experienced analyst" is part of the analytical process, as the method requires and other EPA guidance recommends. The identification algorithm/process employed here does not appear to be sufficiently robust and reliable for this type of work. This results in false negative reporting and low bias in reported PCB concentrations, and is borne out by comparison of results from separate and independent analyses of [split] sediment samples from this site.

Laboratory report format and presentation. The TA [level 4] laboratory report submitted for review, while lengthy, is not comprehensive. Some information/data is repetitive, yet not sufficient to allow a determination of what procedures/methods were employed for generation of sample extracts, extract clean-up steps [i.e., complete bench sheets], source(s) and integrity of calibration and reference materials (calibration standards), and instrumental run conditions (such as GC column lengths, column film thicknesses, etc.). The laboratory report does not include data to allow a routine inspection and determination of potential for false negative reporting. Any further and comprehensive evaluation of this data set requires the submission, inspection and interpretation of instrumental [digital] raw data files for all samples, calibrations, and supporting QC runs associated with this SDG.

Summary. This preliminary evaluation of the subject data identifies multiple deficiencies in data generation that result in biased reporting of total PCBs in sediment samples, such as erroneous target analyte identifications and/or low bias in reported concentrations. Factors identified as having potentially significant and adverse effects on data quality are the following:

1. Target analyte recovery indicators (surrogate compounds and matrix spikes) are generally low and typically less than performance specifications.
2. Generally inadequate extract clean-ups to allow detection and identification of all target analytes.
3. Unreliable data processing algorithm for identification and quantitation of all target analytes, especially for mixtures of Aroclors.

This data set should be considered suspect until a more comprehensive evaluation determines otherwise and that the data quality is sufficient for its intended uses.
