1.0 INTRODUCTION

This Phase 1b Data Report (Phase 1b DR) describes additional analyses of archived samples that were collected in September 2018 during focused surface and subsurface sediment sampling efforts performed in the Swan Island Lagoon (SIL) Study Area (Study Area) as reported in the April 30, 2019 Surface and Subsurface Sediment Field Sampling and Data Report (Pacific Groundwater Group [PGG] 2019). Additional Phase 1b analyses followed the procedures and guidelines specified in the Swan Island Lagoon Surface and Subsurface Sediment Field Sampling Plan (SIL Sediment FSP) (PGG 2018) unless otherwise noted.

The Record of Decision (ROD) for the Portland Harbor Superfund Site (PHSS) (Figure 1) located in Portland, Oregon, described a post-ROD sampling effort to delineate and refine the sediment management area (SMA) footprints, refine the Conceptual Site Model (CSM), determine baseline conditions, and support remedial design (United States Environmental Protection Agency [EPA] 2017a). On December 19, 2017, EPA entered into an Administrative Settlement Agreement and Order on Consent (ASAOC) with the Pre-Remedial Design Agreement and Order on Consent Investigation Group (Pre-RD Group) to conduct the Pre-Remedial Design Investigation and Baseline Sampling (PDI) studies at the PHSS (EPA 2017b). The ASAOC includes a Statement of Work (SOW) and the PDI Work Plan (Geosyntec 2017), which generally describe the agreed upon field investigation activities, data analyses, schedule, and deliverables for the PDI.

Following the submittal of the more general PDI Work Plan, the Pre-RD Group submitted to EPA Field Sampling Plans (FSPs) that specify sampling scopes for surface sediment, core, biological and bathymetry investigations. The PDI Surface Sediment FSP (AECOM and Geosyntec 2018a) and the PDI Subsurface Sediment FSP (AECOM and Geosyntec 2018b) detail PDI sampling throughout the PHSS, including the SIL. Collectively, 74 surface samples and 14 subsurface cores were identified for collection in the SIL for the PDI studies.

The SIL Sediment FSP was prepared to support sediment sampling in the SIL Study Area (Figure 2) and to complement the PDI investigation. This Phase 1b DR (1) summarizes additional analyses of archived samples, including processing of archived in-situ sediment cores and any deviations from the SIL Sediment FSP, and (2) summarizes the validated data, laboratory reports, and data validation package.

1.1 OBJECTIVES

In the SIL Study Area, the PDI data provided in the PDI Evaluation Report (AECOM and Geosyntec 2019) supplement and update the 1997-2007 Remedial Investigation/Feasibility Study (RI/FS) surface sediment data for purposes of remedial design and evaluating remedy effectiveness. The PDI data set provides fewer samples for the SIL than in the RI/FS dataset. As a result, the PDI Evaluation Report Sediment Management Area (SMA) delineation retains historical RI/FS data in the SIL where those locations are more than 100 feet away from a PDI sample and replaces historical RI/FS data within 100 feet of a sample. The December 23, 2019 EPA Remedial Design Guidelines and Considerations (RD Guidelines) (EPA 2019) recommends site-specific

data replacement strategy where "in general, older surface samples that are in close proximity to newer samples are reasonable candidates for replacement if the new sample was taken much more recently than the older surface sample." In DTNA's SIL study area, surface samples were analyzed such that newer samples are within a 100-foot radius of all older RI/FS samples.

Additionally, for core subsamples, the RD Guidelines recommends 1-foot intervals "in dredging areas within an SMA for the purpose of delineating the depth of contamination (DOC)." DTNA's SAP describes core subsampling as 1-ft intervals from 0 to 2 feet and stratigraphic breaks below 2 feet with an interval between 1 to 3 feet, generally consistent with both the Lower Willamette Group (LWG) and PDI approaches. Here, DTNA reports core data at 1-foot intervals as subsampled from archived in-situ cores.

The PDI Evaluation raised concern about uncertainty in data used to delineate SMAs (particularly dioxin and furan data), saying, "Uncertainty in a dataset, particularly values reported as estimated (or J-qualified) must be addressed when these data are used in the remedial design process." (AECOM and Geosyntec 2019, Appendix E). Here, DTNA provide dioxin and furan data for 10 split samples analyzed for D/Fs by a second laboratory, and results of a certified reference material analyzed for D/Fs by three laboratories.

For PCBs, EPA's RD Guidance states, "because the multiple sources of PCBs and varying degrees of weathering at the Site may hinder accurate quantification of PCBs and source identification when analyzing sediment using PCB Aroclor methods." (EPA 2019, Appendix B). EPA goes on to say PCB Aroclor data can be used to estimate total PCB concentrations when data quality objectives are met and the reporting limit for individual Aroclors are less than the cleanup level (9 ug/kg). Here, DTNA provides PCB Aroclor results for 10 splits analyzed by a second laboratory and Aroclor results that pair with PCB Congener results. We used these results to evaluate potential bias between laboratories and between PCB analytical methods (Appendix G).

In sum, the surface and subsurface sediment data presented in this SIL Phase 1b DR supplements DTNA's FSDR and adds to the RI/FS and PDI data to support: (1) the development of a Remedial Design sediment Sampling and Analysis Plan consistent with EPA's RD Guidance; (2) further Pre-RD refinement of the SIL SMA footprint; (3) improve subsurface delineation of the depth of contamination at 1-foot intervals; and (4) provide for data quality evaluation of focused COCs.

1.2 PHASE 1B DR DOCUMENT OVERVIEW

This SIL Phase 1b DR follows the document structure of DTNA's SIL FSDR, which was based on the Portland Harbor Remedial Investigation/Feasibility Study Round 2 Surface and Beach Sediment FSR (Integral 2005a) and Portland Harbor Remedial Investigation/Feasibility Study Round 2B Subsurface Sediment FSR (Integral 2005b).

Section 2, Archived In-Situ Core Sampling Procedures, describes how sediment cores samples were archived and subsampled following Quality Assurance (QA) and Quality Control (QC) procedures to ensure the quality of the data. Section 3, Laboratory Analyses and Data Management describes the chemical and physical analyses conducted, the data

management procedures, and the laboratory deviations from the SIL Sediment FSP. Section 4, Laboratory Analytical Results, summarizes the laboratory sample analysis results for the parameters tested and data validation results. Section 5 lists the references cited in this Phase 1b DR.

Supporting information is provided in appendices:

- Appendix A: Archived Split Cores Sample Logins
- Appendix B: Sediment Core Sampling Logs
- Appendix C: Photographs
- Appendix D: Analytical Laboratory Data Summary Reports
- Appendix E: Data Validation Reports
- Appendix F: Validated Analytical Results
- Appendix G: PCB Aroclor Bias Evaluation

2.0 FIELD SAMPLING INFORMATION

Field sampling was conducted from October 8, 2018 through October 22, 2018. Table 1 summarizes the numbers and types of samples collected and the analyses performed. Surface sediment (0-30 cm) samples were collected between October 8 and October 20 from 131 locations throughout the SIL Study Area. Subsurface sediment core samples were collected on October 21, 2018 and October 22, 2018, from seven SIL Study Area locations.

Field sampling details are provided in the 2019 FSDR (PGG 2019) and followed the procedure described in the SIL Sediment FSP (PGG 2018). The SIL Sediment FSP follows the Surface and Subsurface Sediment FSP sampling and analysis protocols produced by the Pre-RD Group (AECOM and Geosyntec 2018a and 2018b) as derived from the Lower Willamette Group (LWG) RI Rounds 2 and 3 FSPs (Integral Consulting [Integral] 2004 and 2006).

Grab samples and core subsamples were archived at ALS Kelso and TestAmerica laboratories Seattle, Sacramento, and Knoxville. In-situ split cores were archived in 2-ft intervals and processed at ALS Kelso into subsamples on August 26-28, 2019.

After grab sample acceptance, a vertically integrated sample of sediments from the top to the bottom of the hydraulic power grab was collected using a stainless-steel spoon, avoiding sediments in contact with the sides and bottom of the sampler. The sediment sample was placed in a large, stainless-steel bowl and homogenized. A minimum of 1.8 liters of sediment were required for chemical analysis. Once the sediment sample was homogenized to a uniform consistency and color, it was visually described and recorded on sediment grab sample field logs. The following information was recorded: grab recovery depth (nearest cm), degree of leakage, or sediment surface disturbance; sediment grain size, texture, and color; presence, type, and strength of odors; redox-potential discontinuity (RPD) thickness; and any obvious biological or anthropogenic material. Copies of all grab sample field logs are provided in Appendix B.

The homogenized sediment sample was distributed into the appropriate laboratory-provided sampling containers using a stainless steel-spoon, capped, and labeled. Subsamples were placed together in zip-locked bags and stored in a cooler on ice until the end of the sampling day. At the end of each sampling day, all coolers were off-loaded, and samples were logged to chain of custody forms and stored in coolers on ice in a locked box-van sealed with a custody seal. Coolers were checked daily for adequate ice and samples were shipped via courier and field staff under chain of custody with seals to the analytical laboratories for analysis. Copies of chain of custody forms are included in the laboratory reports (Appendix D).

2.1 SUBSURFACE SEDIMENTS

Subsurface sample collection and processing followed the procedures specified in the SIL Sediment FSP and described in the FSDR. Processing of the in-situ archived cores at ALS Kelso by PGG is described in this section. See Appendix A for a list of the in-situ longitudinal sections and core catcher samples archived at ALS Kelso.

Seven sediment cores were collected from seven locations throughout the SIL Study Area. Half of each core, split longitudinally, packaged, was transported on ice under chain of custody by courier to ALS Kelso where it was deep frozen. Table 2 lists each location sampled, the target and actual coordinates, depth to mudline, river stage, and mudline elevation. Table 3 and Table 4a-g lists the samples collected for both Phase 1 and Phase 1b, the date and time sampled, and the analyses conducted per core. Copies of field logs are provided in Appendix B.

2.1.1 Core Sample Handling and Processing

Core samples including in-situ archive cores were processed concurrently with core collection as described in the FSDR. Cores were offloaded immediately after collection and processed at the dock the same day collected.

The core materials were divided longitudinally. One half of the divided core was sampled according to the criteria used for the RI and the PDI as described in the FSDR and the other half was archived. The archived half of the core was sectioned into 2-ft intervals and archived whole. The archived sections were retained in the core tube liner, wrapped in aluminum foil, immobilized using a half-radius tray, wrapped again in foil, placed into a plastic sleeve sealed at both ends, then placed onto core stands in ice-filled coolers. Each layer of packaging - from core tube to outer sleeve - was redundantly labeled with the location identification number (ID), core section number, and top and bottom, and section depths. See Appendix A for a list of the in-situ longitudinal sections and core catcher samples archived at ALS Kelso.

ALS transferred the cores from frozen to refrigerated storage the day before PGG arrived for core processing. PGG then transferred the core sections to a clean lab-bench covered by a fresh sheet of aluminum foil, unwrapped, photographed, measured, and inspected cores for disturbance (Appendix C). Cores remained intact and were well-preserved retaining original structure and length. Because the cores were already described by an experienced geologist in the field, that process was not repeated for the archived sections. Sample handling procedures were consistent with those described in the FSP and FSDR.

To summarize, the sediment sample was placed in a large, stainless-steel bowl and homogenized. Once the sediment sample was homogenized to a uniform consistency and color, it was distributed into the appropriate laboratory-provided sampling containers using a stainless steel-spoon, then capped, and labeled, and logged to COCs. A deviation from the FSP is in the subsampled intervals used in Phase 1b and additional subsampling for radioisotope age-dating not reported here. For each core section, a 1-centimeter diameter "plug" of approximately 10 grams was removed at three cm intervals to 60 centimeters, and 5 centimeters thereafter for radioisotope analysis. And for each core section, subsamples were homogenized at 0.5 ft intervals, 200-250 grams weighed out for radioisotope analysis, and then the remaining sediment further homogenized to 1-foot intervals. The subsamples were placed together in zip-locked bags and stored in coolers in ALS refrigerators. At the end of the subsampling, samples were transferred to ALS custody or placed on ice and shipped overnight by ALS to other analytical laboratories. Copies of chain of custody forms are included in the laboratory reports (Appendix D). Phase 1b Sediment Core Processing Forms are provided with the original core logs in Appendix B.

2.1.2 Subsurface Sample Nomenclature

Sample nomenclature was developed as follows to relate samples to the grid node, sample type, and sample interval. All samples have a unique identifying sample ID that includes the following:

- Grid node. Alphanumeric code for each node. Letter A to T identify up/down river position, and numbers 1-7 identify cross-river positions (e.g. J5).
- Sample type. SC for Sediment Core.
- Analysis Phase. "1b" for Phase 1b.
- Sample Depth. The actual depth interval of the collected sample in feet (top ## to bottom ##). For example, if the depth interval is 0 to 1 ft, the sample ID includes "00 to 10", with the last digit indicating tenths of feet.
- Sample Date. The date of sample processing was added to the sample ID in the following month, day, year format: MMDDYY

For example, a sediment core sample from grid node J5 for the 0 to 1 ft interval processed during Phase 1b on August 27, 2019 would have the sample ID J5-SC1b-00to10-082719. Note that the sample date and time included on the label and COC reflect the date of core processing rather than the date of archive core collection. This was considered by the data validator when assessing holding times for the core samples. All core samples were analyzed within holding times as measured from the original core collection date (Table 5).

In the FSDR, field duplicate samples were not collected per the SIL Sediment FSP due to limited sample volume after archiving the in-situ longitudinally split core. Here, three field duplicates were collected. Field duplicates are assigned a prefix beginning at 411 (e.g., 411-SC1b-50to60-82619). Equipment rinseate blanks collected during core processing were labeled "711-82719" and "712-82819" combining a numerical sequence beginning at 71X- and the date. Additional data fields that describe each unique sample

feature, location, and attributes were recorded in the field forms and are included in the project database.

2.2 EQUIPMENT DECONTAMINATION PROCEDURES

Equipment decontamination procedures were performed as described in the SIL Sediment FSP. Decontamination of field sampling equipment, bowls, and spoons occurred between subsamples. The decontamination steps included an initial rinse with tap water to dislodge particles, a scrub with brush and Liquinox™ phosphate-free detergent, and then a rinse with deionized water from ALS tap. Sampling spoons and bowls were covered with aluminum foil until use (dull side down). Gloves were replaced before and after handling each sample or conducting decontamination procedures.

2.3 INVESTIGATION-DERIVED WASTE DISPOSAL

Investigation-derived waste (IDW) disposal occurred as described in the SIL Sediment FSP. No excess sediment was generated by the archived core subsampling.

Tyvek, gloves, paper towels, plastic sheeting, and other non-hazardous waste material generated during sampling was placed in heavyweight garbage bags placed in normal refuse containers at ALS for disposal at a non-hazardous solid waste landfill.

3.0 LABORATORY ANALYSES AND DATA MANAGEMENT

This section summarizes the chemical and physical analyses performed for the characterization of surface and subsurface sediment samples.

3.1 PHYSICAL AND CHEMICAL ANALYSES

For analytical consistency with the Pre-RD Group 2018 sediment sampling effort, the same laboratories, analytical and preparation methods were used to perform the physical and chemical analyses for archived grab sample analyses already in frozen archive at the laboratory:

- ALS in Kelso, Washington, analyzed samples for chlorinated pesticides, PAHs, phthalates, tributyltin, and total solids.
- TestAmerica in:
  - Fife, Washington, analyzed samples for PCB Aroclors, total petroleum hydrocarbons diesel extended range, metals and mercury, TOC, grain size, and total solids.
  - Sacramento, California, analyzed samples for dioxins/furans.
  - Knoxville, Tennessee, analyzed samples for PCB congeners and specific gravity.

The 1-foot core samples from the in-situ archived cores were analyzed at the following laboratories for contaminants of concern:

- ALS in Kelso, Washington, analyzed samples for chlorinated pesticides, PAHs, phthalates, tributyltin, and total solids.
- ARI in Seattle, Washington, for PCB Aroclors and TOC.
- TestAmerica in:
  - Fife, Washington, analyzed samples for total petroleum hydrocarbons diesel extended range, metals and mercury, and total solids.
  - Knoxville, Tennessee, analyzed samples for PCB congeners and specific gravity.
- Cape Fear Analytical in Wilmington, North Carolina, analyzed samples for dioxins/furans.

Additionally, 10 split samples were transferred from TA to SGS Axys in Sydney, British Columbia, for dioxin/furan analysis, and 10 split samples were transferred from TA to ARI in Seattle, Washington, for PCB Aroclor analyses. Three samples of a natural soil matrix certified reference material (EDF-5183) were direct shipped to TestAmerica Knoxville, SGS Axys, and Cape Fear for D/F analysis in batches with sediment samples, for a total of nine CRMs. The CRMs arrive in 10-gram samples that are completely consumed by a single use.

This CRM was selected over other CRMs because the true TCDD and PeCDD concentrations are relatively close to the cleanup levels and remedial action levels for those analytes. For example, the EDF-5183 certified value for TCDD is 0.11 ± 0.14 picograms per gram (pg/g), below the RAL of 0.6 pg/g.

ARI and SGS Axys were selected for PCB Aroclor and D/F analyses because those laboratories have a proven track record at the Lower Duwamish Waterway Superfund Site. Also, Cape Fear was selected for D/F analyses because they are a D/F-focused laboratory used at other sites in Portland Harbor.

The laboratories used in Phase 1b analyses use the same analytical methods described in the SIL Sediment QAPP and FSP (PGG 2018). For PCB Aroclors, ARI provides detection limits below the cleanup level of 9 ug/kg, comparable to TestAmerica. For D/Fs, both Cape Fear and SGS Axys provide comparably low detection limits.

These analytes include the Portland Harbor sediment focused-COCs and COCs specified in Tables 17 and 21 of the ROD (EPA 2017a). The analytes and analytical methods are provided in Table 6.

Individual analytes were also used to calculate analyte totals following the procedures described in the FSDR (PGG 2019), Appendix E 2018 PDI Surface Sediment Database in the Pre-RD Group Footprint Report (AECOM and Geosyntec 2019), Appendix A3 of the Portland Harbor Remedial Investigation (EPA 2016), and RD Guidance (EPA 2019). The calculated total analytes are listed in Table 7. A description of summation rules is provided in Section 3.5.

3.2 FIELD QUALITY ASSURANCE/QUALITY CONTROL

Field quality assurance/quality control (QA/QC) samples were collected with the surface sediment and subsurface sediment samples as specified in the SIL Sediment FSP. In Phase 1b, three additional field duplicates were collected from in-situ archived cores, and two additional rinseate blanks were collected during archived core processing. Field duplicates, temperature blanks, and rinseate blanks were collected as outlined in the SIL Sediment FSP (Table 8). Rinseate blanks were collected by pouring deionized water over the sampling bowls and spoons after decontamination.

3.2.1 Sample Storage, Transport, and Custody

As stated in above, during archived core processing, homogenized sediment samples were distributed into the appropriate laboratory-provided sampling containers using a stainless-steel spoon, capped, and labeled. Subsamples of a given sample were placed together in zip-locked bags and packed in a cooler and logged on COCs. Coolers were moved to walk-in refrigerators at ALS Kelso. Ice in sealed plastic bags was then placed in the cooler to maintain a temperature of approximately 4ºC. Coolers were stored onboard until the end of the sampling day. At the end of the archived core processing, all coolers were repacked with bubble wrap to prevent breakage and iced for shipment. Each cooler was clearly labeled with the respective analytical laboratory name, name of project, company name, and contact phone number to enable positive identification. The associated chain-of-custody forms were placed into a zip-locked bag and taped on the inside lid of each cooler. A temperature blank was added to each cooler and a custody seal was applied. Coolers were then transferred to ALS Shipping for overnight shipment to the analytical laboratories. Custody was transferred directly for samples analyzed by ALS from PGG to ALS Sample Receiving.

3.2.2 Field Duplicates

A total of three field duplicates were collected from archived core samples. Field duplicate samples were stored, transported, and logged using the same procedures as standard sediment samples.

3.2.3 Field Rinseate Blanks

Consistent with the SIL Sediment FSP, two rinseate blank were collected during archived core processing. Rinseate blanks were collected by pouring deionized water over sampling equipment (spoons and bowls) after decontamination. Water poured over the equipment was collected in a stainless bowl and transferred to bottles using a decontaminated stainless-steel funnel. Rinseate blank bottles were stored, transported, and logged using the same procedures as standard sediment samples. Deionized water was sourced directly from ALS laboratory deionized water spigot in the core processing room.

3.3 LABORATORY DEVIATIONS FROM THE SIL SEDIMENT FSP

Analytical laboratories adhered to all QA/QC procedures outlined in the SIL Sediment FSP. Laboratories provided all data in electronic format and QA/QC reports, including a

narrative of the standard QA/QC protocols. Data validation and data management was performed according to the SIL Sediment FSP by a third-party data validator, Ecochem, Inc. (Appendix E).

Laboratory deviations from the SIL Sediment FSP include:

- TestAmerica transferred sample "L3-SC-00to10-102218" instead of requested sample "L3-SC-10to20-102218" to SGS Axys.

3.4 DATA QUALITY AND USABILITY

Independent data validation was performed on all results by Ecochem. Full validation (EPA Stage 4) was performed on a minimum of 10% of the data as specified in the SIL Sediment FSP. A summary-level (EPA Stage 2) validation review was conducted on the remaining data. The data validation report (Appendix E) summarizes data validation and provides detailed information regarding all data qualifiers.

Data qualified as undetected ("U") or not qualified are usable for the intended purposes. Data qualified as estimated ("J") or tentatively identified ("N") may be less accurate or precise than unqualified data though are usable for the intended purposes. Data not meeting the data quality criteria were qualified as undetected, estimated, tentatively identified, or rejected during validation, in accordance with the SIL Sediment FSP.

3.5 DATA MANAGEMENT

Following data validation, Ecochem provided PGG with composite EQuIS-formatted EDDs of the final validated data. PGG imported the EDDs into the project's Access-based structured Relational Database Management System (RDMS).

3.5.1 Calculated Totals

Individual analytes were used to calculate analyte totals following the procedures described in Appendix C3 of the PDI Evaluation Report (AECOM and Geosyntec 2019) and Appendix E3 of the SCRA Database and Data Management in the EPA's Portland Harbor Remedial Investigation (EPA 2016), and RD Guidance (EPA 2019). See Table 7 for a summary of calculated totals and required number of analytes.

The general summation rules are as follows:

- Calculated totals are the sum of all detected results plus a single value for all the non-detects of one half of the highest reporting detection limit for that sample. When all the individual analytes for a sample are non-detect, the highest detection limit is used and the result is qualified with a "U" flag.

- Total Toxic Equivalents (TEQs) (e.g. carcinogenic PAHs) are calculated using Toxicity Equivalency Factors (TEFs) for each analyte. Total TEQs are calculated as the sum of each detected concentration multiplied by the corresponding TEF

value plus a single value as one half of the highest toxicity-weighted non-detect concentration for that sample. When all the analytes were not detected in a given sample the reported total TEQ value was the highest analyte detection limit multiplied by the TEF and the result is qualified with a "U" flag.

- For PCB Aroclors, calculated totals have been updated per the RD Guidance from the sum of detected results (non-detects treated as zeros) to the sum of all detected results plus a single value for all the non-detects of one half of the highest reporting detection limit for that sample, consistent with other analyte totals. When all the individual analytes for a sample are non-detect, the highest detection limit is used, and the result is qualified with a "U" flag.

All totals calculations qualifiers are appended with "T" descriptors to indicate the value is a calculated total. Additionally, "A" descriptors are appended when the sum is based on a limited number of analytes. These rules are provided in Tables 9 and 10.

In the Aroclor data set from TestAmerica, a single Aroclor was detected per sample, either Aroclor 1254 or Aroclor 1260. Accordingly, Total PCB Aroclors sums are the single detected result plus half the highest detection limit or the highest detection limit when all results are non-detect. In contrast, ARI consistently quantified concentrations for two or three Aroclors, and the total PCB Aroclor is the sum of detections plus half of the highest detection limit for non-detect analytes.

Calculated totals are denoted in the project database using "CALC" in the analyte name field. Additionally, the analyte names also describe the parameter group that is summed (e.g. "TPAH" for Total PAHs, "LPAH" for Low molecular weight PAHs) and the treatment of non-detect values (e.g. "ND_PDI" for the PDI method for the addition of ½ the highest non-detect detection limit, and "ND_ZERO" for non-detects treated as zeros).

3.5.2 Significant Figures

Results provided by the analytical laboratories and data validator were stored as text and double data types. The text values retain the correct number of significant figures for the analytical data and calculated totals. The double data type retains the digits present in the original result. For calculated totals, this means all significant figures were carried through the calculation. For example, the sum of results with 2 significant figures each, 11 + 0.22, is stored in text type as "11" and double type as "11.22".

4.0 LABORATORY ANALYTICAL RESULTS

This section summarizes chemistry and physical parameters and data validation of surface and subsurface sediment samples.

4.1 SURFACE SEDIMENT RESULTS

Table 9 presents a summary of focused COC results for the surface sediment locations that were analyzed in Phase 1b, including the percent of detections, the range of detected concentrations, and percent of detections exceeding Remedial Action Levels (RALs).

Analytical results for focused COCs are provided in Tables 11a-g. Data tables containing full results for each Phase 1b sample are presented in Appendix F. Figures 3 through 8 present focused COC results by location.

4.2 SUBSURFACE SEDIMENT RESULTS

Table 10 presents a summary of focused COC results for the subsurface sediment samples analyzed during Phase 1b including the percent of detections, the range of detected concentrations, and percent of detections exceeding Remedial Action Levels (RALs).

Analytical results for focused COCs are provided in Tables 11a-g. Data tables containing full results for each sample are presented in Appendix F. Profiles of focused COC results for each core are included in Figures 9 through 15.

Mercury	SW7471A	35	35	20	20	49	49	0	0
BEHP	SW8270	38	38	18	18	48	48	0	0
TBT	ALS Butyltin SOP[2]	39	38	18	18	48	48	0	0

[1] Number of laboratory-provided results, including laboratory provided summations of analyte sets
Summations calculated after laboratory analyses are not included in the result counts.
Rejected results are not included in the result counts. Field Duplicates are not included in counts.

[2] ALS Butyltin SOP is based on Krone et al 1989 and Unger et al 1986.

[a] Count does not include laboratory-provided sums and TEQs

DDx = dichlorodiphenyltrichloroethane and its derivatives

PAH = polycyclic aromatic hydrocarbon

PCB = polychlorinated biphenyls

TOC = Total Organic Carbon

BEHP = Bis 2-Ethylhexyl phthalate

TBT - tributyltin

OC - organochlorine

L3-SC	7634716	700625	7634702	700623	21.28'	6.4	-14.88'
R4-SC	7635116	700167	7635121	700172	32.66'	8.29	-24.37'

[a] Shore sample elevation is from 2018 Bathymetry (AECOM & Geosyntec 2019).

Oregon State Plane Coordinate System, Oregon North Zone

Horizontal Locations (X,Y) are North American Datum 1983 (NAD83), international feet

NAVD88 - North American Vertical Datum 1988

River stage is from the Morrison Street Bridge Station (PRT03)

Elev. = Elevation

NA = depth not measured for shore samples

NC = not calculated

NS = Not Sampled, see report for explanation by location

Table 6. Laboratory Analytical Methods and Analytes

Parameter Group	Parameter	Units	CAS No.	Method

[1] ALS Butyltin SOP is based on Krone et al 1989 and Unger et al 1986.

ug/kg = micrograms per kilogram
ng/g = nanograms per gram
% = percent
g/cm3 = grams per cubic centimeter

DDx = dichlorodiphenyltrichloroethane and its derivatives
PAH = polycyclic aromatic hydrocarbon
PCB = polychlorinated biphenyls
DDE = dichlorodiphenyldichloroethylene
DDD = dichlorodiphenyldichloroethane
DDT = dichlorodiphenyltrichloroethane
SIM = Selective Ion Monitoring
SOP = Standard Operating Procedure
NWTPH-Dx = Northwest Total Petroleum Hydrocarbon-Diesel Extended
CAS = Chemical Abstract Service
HxCDD = heptachlorodibenzo-para-dioxin
HpCDF = heptachlorodibenzofuran
HxCDD = hexachlorodibenzo-p-dioxin
HxCDF = hexachlorodibenzofuran
PeCDD = pentachlorodibenzo-p-dioxin
PeCDF = pentachlorodibenzofuran
TCDD = tetrachlorodibenzo-p-dioxin
TCDF = tetrachloro dibenzo-p-furan
TBT - tributyltin
EPA = Environmental Protection Agency

Table 7. Calculated Total Analytes And Required Number of Analytes

Parameter Group	Parameter	Units	CAS No.	Method	Expected Analytes	Limited Analytes ("A" Qualify)	Do Not Sum
OC Pesticides	CALC_TOTAL_DDx_ND_PDI	ug/Kg	--	CWA1699M	6	<6	--

[a] One detect is acceptable in cases where 7 analytes reported and non-detects "R" qualified. See Report text Section 3.4.

ug/kg = micrograms per kilogram

ng/g = nanograms per gram

PCB = polychlorinated biphenyls

DDx = dichlorodiphenyltrichloroethane and its derivatives

DDE = dichlorodiphenyldichloroethylene

DDD = dichlorodiphenyldichloroethane

DDT = dichlorodiphenyltrichloroethane

PAH = polycyclic aromatic hydrocarbon

CPAH = carcingogenic PAHs

LPAH = low molecular weight PAHs

HPAH = high molecular weight PAHs

OC = organochlorine

PCB congeners are counted by individual congeners regardless of coelutions (e.g. a valid PCB-108/124 result counts as 2 analytes)

'A' descriptor - indicates the total value is based on limited number of analytes.

-- - Not applicable.

Total concentrations from component analytes calculated with Pre-Remedial Design Investigation summation rules for DDx, PAHs, PCB Congeners, and chlordanes (AECOM and Geosyntec 2019, Appendix E). Total Aroclors, DDD, DDE, and DDT were calculated with EPA Remedial Investigation summation rules (EPA, 2016 (Appendix A3. Table A3-3)) as the Pre-Remedial Design Investigation report did not include summation rules.

Table 8. Summary of Quality Control Samples

Analytical Methods		Phase 1			Phase 1b

Total DDx	160	ug/kg	64	95	5	0	0.18 T	31 AT

Surface sediment samples are those collected from a depth of 0 up to 30 cm, and include core samples from the surface sediment.

1 Remedial Action Levels (RALs) correspond to EPA Record of Decision (ROD) Table 21

2 Exceedance summary does not include QC sample results

3 Level is from Proposed Explanation of Significant Differences (PESD), Appendix A1, Updated Record of Decision Table 21 (EPA 2018)

ug/kg = micrograms per kilogram

DDx = dichlorodiphenyltrichloroethane and its derivatives

PAH = polycyclic aromatic hydrocarbon

PCB = polychlorinated biphenyls

ROD = Record of Decision

PESD = Proposed Explanation of Significant Differences

ng/g = nanograms per gram

PeCDD = pentachlorodibenzo-p-dioxin

PeCDF = pentachlorodibenzofuran

TCDD = tetrachlorodibenzo-p-dioxin

COC = Constituent of Concern

J = Reported result is an estimate

U = Analyte was not detected in sample

T = Total concentration from component analytes calculated with Pre-Remedial Design Investigation summation rules (AECOM and Geosyntec 2019, Appendix E).

A = Summed value based on limited number of analytes.

Table 10. Summary of Subsurface Sediment Exceedances of ROD Remedial Action Levels for Focused COCs

Analyte	ROD Remedial Action Level[1]	Units	Number of Results[2]	% Detected	% Non-Detect	% Results Exceeds RAL	Minimum Detected Result	Maximum Detected Result
Total PCBs Congeners	75	ng/g	10	100	0	70	1.1 JT	1100 JT

[1] MCL = Minimum Cleanup Level; corresponds to EPA Record of Decision Table 17

[2] RAL = Remedial Action Level; corresponds to EPA Record of Decision Table 21

EF = Exceedance Factor (Result/RAL); Non-detects shown as less than (<) the calculated value

NC = Not Calculated; result is non-detect with a detection limit greater than MCL or RAL, or result is "R" qualified.

NE = Not Evaluated; result is non-detect with a detection limit greater than MCL or RAL, or result is "R" qualified.

J = Reported result is an estimate.

U = Analyte was not detected in sample.

T = Total concentration from component analytes calculated with EPA Remedial Investigation summation rules (EPA, 2016 (Appendix A3. Table A3-3))

A = Summed value based on limited number of analytes

R = Rejected

PCB = polychlorinated biphenyls

[1] MCL = Minimum Cleanup Level; corresponds to Proposed Explanation of Significant Differences, Appendix A1, Updated Record of Decision Table 17 (EPA 2018)

[2] RAL = Remedial Action Level; corresponds to Proposed Explanation of Significant Differences, Appendix A1, Updated Record of Decision Table 21 (EPA 2018)

[3] EPA has not yet finalized the ESD; further adjustments to the values for PAHs may be necessary when EPA finalizes the document.

EF = Exceedance Factor (Result/RAL); Non-detects shown as less than (<) the calculated value

Table 11c. Analytical Results for Total PAHs (Calculated Total)

Sample ID	Sample Date	Result	Qualifier	Units	Exceeds MCL[1] (23000 ug/kg)	Exceeds RAL[2] (30000 ug/kg)[3]	RAL EF

NC = Not Calculated; result is non-detect with a detection limit greater than MCL or RAL, or result is "R" qualified.

NE = Not Evaluated; result is non-detect with a detection limit greater than MCL or RAL, or result is "R" qualified.

J = Reported result is an estimate.

U = Analyte was not detected in sample.

T = Total concentration from component analytes calculated with Pre-Remedial Design Investigation summation rules (AECOM and Geosyntec 2019, Appendix E)

A = Summed value based on limited number of analytes

R = Rejected

PAHs = polycyclic aromatic hydrocarbons

Table 11d. Analytical Results for 2,3,7,8-TCDD

Sample ID	Sample Date	Result	Qualifier	Units	Exceeds MCL[1] (0.0002 ug/kg)	Exceeds RAL[2] (0.0006 ug/kg)	RAL EF

[2] RAL = Remedial Action Level; corresponds to EPA Record of Decision Table 21

EF = Exceedance Factor (Result/RAL); Non-detects shown as less than (<) the calculated value

NC = Not Calculated; result is non-detect with a detection limit greater than MCL or RAL, or result is "R" qualified.

NE = Not Evaluated; result is non-detect with a detection limit greater than MCL or RAL, or result is "R" qualified.

J = Reported result is an estimate.

U = Analyte was not detected in sample.

T = Total concentration from component analytes calculated with Pre-Remedial Design Investigation summation rules (AECOM and Geosyntec 2019, Appendix E)

A = Summed value based on limited number of analytes

R = Rejected

TCDD = tetrachlorodibenzo-p-dioxin

Table 11f. Analytical Results for 2,3,4,7,8-PeCDF

Sample ID	Sample Date	Result	Qualifier	Units	Exceeds MCL[1] (0.0003 ug/kg)	Exceeds RAL[2] (0.2 ug/kg)	RAL EF

[1] MCL = Minimum Cleanup Level; corresponds to EPA Record of Decision Table 17

[2] RAL = Remedial Action Level; corresponds to EPA Record of Decision Table 21

EF = Exceedance Factor (Result/RAL); Non-detects shown as less than (<) the calculated value

NC = Not Calculated; result is non-detect with a detection limit greater than MCL or RAL, or result is "R" qualified.

NE = Not Evaluated; result is non-detect with a detection limit greater than MCL or RAL, or result is "R" qualified.

J = Reported result is an estimate.

U = Analyte was not detected in sample.

T = Total concentration from component analytes calculated with Pre-Remedial Design Investigation summation rules (AECOM and Geosyntec 2019, Appendix E)

A = Summed value based on limited number of analytes

R = Rejected

PeCDF = pentachlorodibenzofuran

[1] MCL = Minimum Cleanup Level; corresponds to EPA Record of Decision Table 17

[2] RAL = Remedial Action Level; corresponds to EPA Record of Decision Table 21

EF = Exceedance Factor (Result/RAL); Non-detects shown as less than (<) the calculated value.

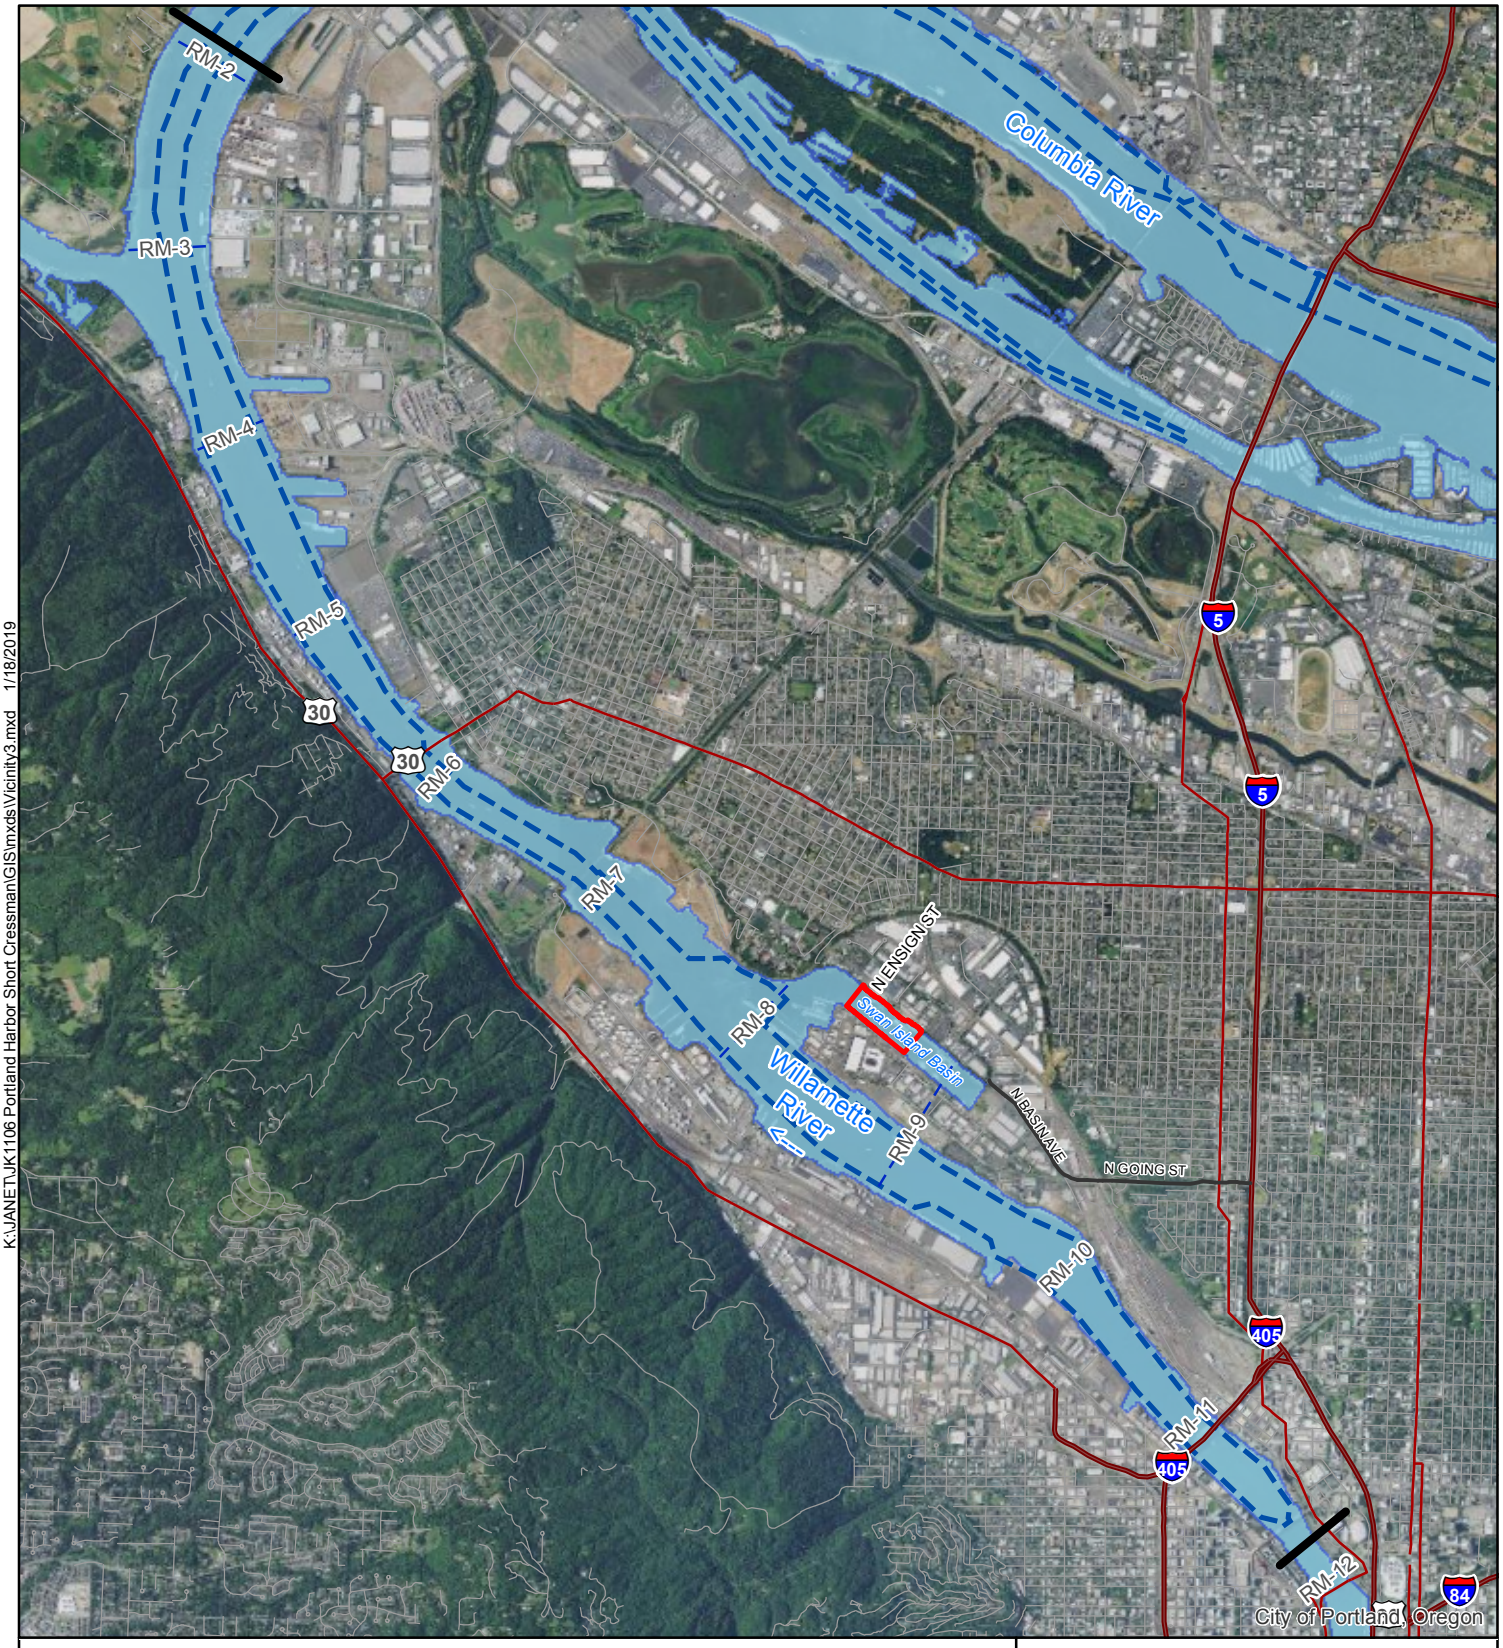
NC = Not Calculated; result is non-detect with a detection limit greater than MCL or RAL, or result is "R" qualified.

Table 11g. Analytical Results for Total DDx (Calculated Total)

Sample ID	Sample Date	Result	Qualifier	Units	Exceeds MCL[1] (6.1 ug/kg)	Exceeds RAL[2] (160 ug/kg)	RAL EF

NE = Not Evaluated; result is non-detect with a detection limit greater than MCL or RAL, or result is "R" qualified.

J = Reported result is an estimate.



U = Analyte was not detected in sample.

T = Total concentration from component analytes calculated with Pre-Remedial Design Investigation summation rules (AECOM and Geosyntec 2019, Appendix E)

A = Summed value based on limited number of analytes

R = Rejected

DDx = dichlorodiphenyltrichloroethane and its derivatives

Analytical Report for Service Request No: K1906902

Janet Knox
Pacific Groundwater Group
2377 Eastlake Ave., East
Suite 200
Seattle, WA 98102

RE: DTNA Swan Island Lagoon Sediment / 2006-00115

Dear Janet,

Enclosed are the results of the sample(s) submitted to our laboratory October 22, 2018
For your reference, these analyses have been assigned our service request number **K1906902.**

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3364. You may also contact me via email at howard.holmes@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LOD	Limit of Detection
LOQ	Limit of Quantitation
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated value.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.
H	The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

#	The control limit criteria is not applicable. See case narrative.
J	The result is an estimated value.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.
Q	See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimated value.
J	The result is an estimated value.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at www.ALSGlobal.com or at the accreditation bodies web site.
Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/anlayte is offered by that state.

Case Narrative

Phone (360)577-7222 Fax (360)636-1068
www.alsglobal.com

Client: Pacific Groundwater Group (PGG)
Project: DTNA Swan Island Lagoon Sediment
Sample Matrix: Sediment

Service Request: K1906902
Date Received: 10/10/2018 - 10/22/2018

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier level IV requested by the client.

Sample Receipt:

Twenty three sediment samples were received for analysis at ALS Environmental between 10/10/2018 - 10/22/2018. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements. These samples were originally logged under K1810301, K1810086 and K1810267.

Semivolatiles by GC/MS:

Method 8270D, Low Level Semivolatile Organic Compounds by GC/MS 08/10/2019: All samples were received past holding time remaining. The analysis was performed as soon as possible after the analysis was requested. The data was flagged to indicate the holding time violation.

Method 8270D, Low Level Semivolatile Organic Compounds by GC/MS 08/10/2019: The control criteria were exceeded for p-Terphenyl-d14 in sample J2A3-0to18-101218 due to matrix interference. The presence of non-target background components prevented adequate resolution of the surrogate. Accurate quantitation was not possible. No further corrective action was appropriate.

Method 8270D, Low Level Semivolatile Organic Compounds by GC/MS 08/10/2019: The control criteria for matrix spike recovery of Bis(2-ethylhexyl) Phthalate for sample 515-0to26-101918 were not applicable. The analyte concentration in the sample was significantly higher than the added spike concentration, preventing accurate evaluation of the spike recovery.

Method 8270D, Polynuclear Aromatic Hydrocarbons by GC/MS SIM Ultra Low Level 08/06/2019: The matrix spike recoveries of all analytes for Matrix Spikes (MS/DMS) KQ1910711-01/02 was outside control criteria. Recovery in the Laboratory Control Sample (LCS) was acceptable, which indicated the analytical batch was in control. For a few analytes the concentration in the sample was significantly higher than the added spike concentration, preventing accurate evaluation of the spike recovery. The limits are default values temporarily in use until sufficient data points are generated to calculate statistical control limits. Based on the method and historic data, the recoveries observed were in the range expected for this procedure. No further corrective action was taken. The matrix spike outlier suggested a potential low bias in this matrix. No further corrective action was appropriate.

Method ALS SOP, Organochlorine Pesticides by GC/MS/MS0 08/07/2019: The internal standard recovery of Pyrene-d1 in all samples exceeded control criteria because of matrix interference. All samples were performed at a dilution in an attempt to minimize the matrix effect. The diluted analysis produced similar results; high internal standard recovery and comparable target analyte levels. Results from the original undiluted analysis have been reported. Matrix spike and Laboratory Control Sample recovery were all acceptable demonstrating that the analysis was in control. The results quantified using this internal standard were flagged to indicate the problem.

Semivoa GC:

Method ALS SOP, Butyltins 08/14/2019:T he upper control criterion was exceeded for tri-n-butyltin in Continuing Calibration Verification (CCV) KQ1911652-002. Samples were reanalyzed three times with similar results of a failing closing Continuing Calibration Verification (CCV). No further corrective action was required.

Method ALS SOP, Butyltins 08/14/2019: The original Laboratory Control Sample (LCS) was inadvertently spiked with a faulty standard prior to a check of the standard that showed results outside acceptance criteria. An additional lot of standard was not readily available so a Laboratory Control Sample (LCS) and Duplicate Laboratory Control Sample (DLCS) was added to the batch from the previous, expired standard when discovered. This LCS/DLCS combination resulted in acceptable recoveries showing no sign of concentration or degradation. The data from this LCS/DLCS have been reported.

Approved by  Date 08/26/2019

Method ALS SOP, Butyltins 08/21/2019: The control criteria for matrix spike recovery of Tri-n-butyltin Cation for sample A4-0to25 -100818 were not applicable. The analyte concentration in the sample was significantly higher than the added spike concentration, preventing accurate evaluation of the spike recovery.

Approved by  Date 08/26/2019

Client PFG Service Request ~~K18~~ 10086

Received: 10/15/16 Opened: 10/15/16 By: BR Unloaded: 10/15/16 By: BR

1. Samples were received via? *USPS* *Fed Ex* *UPS* *DHL* *PDX* *Courier* *Hand Delivered*
2. Samples were received in: (circle) *Cooler* *Box* *Envelope* *Other* _____ *NA*
3. Were custody seals on coolers? NA Y N If yes, how many and where? front
   If present, were custody seals intact? Y N If present, were they signed and dated? Y N

Raw Cooler Temp	Corrected Cooler Temp	Raw Temp Blank	Corrected Temp Blank	Corr. Factor	Thermometer ID	Cooler/COC ID NA	Tracking Number NA Filed
6.0	6.2	5.9	6.1	+0.2	298		
2.1	2.2	2.3	2.4	+0.1	349		
5.9	5.8	2.2	2.1	-0.1	356		
4.2	4.1	3.9	3.8	-0.1	394		

4. Packing material: *Inserts* *Baggies* *Bubble Wrap* *Gel Packs* *Wet Ice* *Dry Ice* *Sleeves* _____
5. Were custody papers properly filled out (ink, signed, etc.)? NA Y N
6. Were samples received in good condition (temperature, unbroken)? *Indicate in the table below.* NA Y N
   If applicable, tissue samples were received: *Frozen* *Partially Thawed* *Thawed*
7. Were all sample labels complete (i.e analysis, preservation, etc.)? NA Y N
8. Did all sample labels and tags agree with custody papers? *Indicate major discrepancies in the table on page 2.* NA Y N
9. Were appropriate bottles/containers and volumes received for the tests indicated? NA Y N
10. Were the pH-preserved bottles (*see SMO GEN SOP*) received at the appropriate pH? *Indicate in the table below* NA Y N
11. Were VOA vials received without headspace? *Indicate in the table below.* NA Y N
12. Was C12/Res negative? NA Y N

1. Samples were received via? *USPS* *Fed Ex* *UPS* *DHL* *PDX* *Courier* *Hand Delivered*
2. Samples were received in: (circle) *Cooler* *Box* *Envelope* *Other* _____ *NA*
3. Were custody seals on coolers? NA Y N If yes, how many and where? _____
   If present, were custody seals intact? Y N If present, were they signed and dated? Y N

Raw Cooler Temp	Corrected Cooler Temp	Raw Temp Blank	Corrected Temp Blank	Corr. Factor	Thermometer ID	Cooler/COC ID NA	Tracking Number NA	Filed
4.1	4.1	5.0	5.0	0.0	390			
5.7	5.8	6.0	6.1	+0.1	393			
5.7	5.6	5.9	5.8	+/-0.1	394			

4. Packing material: *Inserts* *Baggies* *Bubble Wrap* *Gel Packs* *Wet Ice* *Dry Ice* *Sleeves* _____
5. Were custody papers properly filled out (ink, signed, etc.)? NA Y N
6. Were samples received in good condition (temperature, unbroken)? *Indicate in the table below.* NA Y N
   If applicable, tissue samples were received: *Frozen* *Partially Thawed* *Thawed*
7. Were all sample labels complete (i.e analysis, preservation, etc.)? NA Y N
8. Did all sample labels and tags agree with custody papers? *Indicate major discrepancies in the table on page 2.* NA Y N
9. Were appropriate bottles/containers and volumes received for the tests indicated? NA Y N
10. Were the pH-preserved bottles (*see SMO GEN SOP*) received at the appropriate pH? *Indicate in the table below* NA Y N
11. Were VOA vials received without headspace? *Indicate in the table below.* NA Y N
12. Was C12/Res negative? NA Y N

Sample ID on Bottle	Sample ID on COC	Identified by:

Sample ID	Bottle Count Bottle Type	Out of Temp	Head-space	Broke	pH	Reagent	Volume added	Reagent Lot Number	Initials	Time

Replicate Sample Summary
Inorganic Parameters

Sample Name:	Lab Code:	MRL	Sample Result	Duplicate Result	Average	RPD	RPD Limit	Date Analyzed
O7-0to27-101918	K1906902-001DUP	-	38.8	37.4	38.1	4	20	07/30/19
C4-0to27-100918	K1906902-011DUP	-	40.3	40.3	40.3	<1	20	07/30/19

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

QA/QC Report

Client:	Pacific Groundwater Group (PGG)	**Service Request:**	K1906902
Project:	DTNA Swan Island Lagoon Sediment/2006-00115	**Date Analyzed:**	08/07/19 15:06
Sample Matrix:	Sediment	**Date Extracted:**	08/01/19

Lab Control Sample Summary
Organochlorine Pesticides by GC/MS/MS

Sample Name:	Lab Control Sample	**Instrument ID:**	K-MS-42
Lab Code:	KQ1910714-03	**File ID:**	J:\MS42\Data\080719\080719F009.D
Analysis Method:	ALS SOP	**Analysis Lot:**	646431,647382
Prep Method:	EPA 3541	**Extraction Lot:**	341604

This Lab Control Sample applies to the following analyses.

Analyte Name	**Sample Result**	**Result**	**Spike Amount**	**% Rec**	**Result**	**Spike Amount**	**% Rec**	**% Rec Limits**	**RPD**	**RPD Limit**
Bis(2-ethylhexyl) Phthalate	550	982	278	154 *	538	263	-6 *	23-123	58*	40

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Prep Summary Report

Client: Pacific Groundwater Group (PGG) **Service Request:**K1906902
Project: DTNA Swan Island Lagoon Sediment/2006-00115
Sample Matrix: Sediment

Low Level Semivolatile Organic Compounds by GC/MS

Prep Method: EPA 3541 **Extraction Lot:** 341603
Analytical Method: 8270D **Extraction Date:** 08/01/19 10:08

Sample Name	Lab Code	Date Collected	Date Received	Sample Amount	Final Amount	Percent Solids

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

RE: Swan Island Lagoon Sediment Investigation / 2006-00115

Dear Janet,

Enclosed is the revised report for the sample(s) submitted to our laboratory August 29, 2019
For your reference, these analyses have been assigned our service request number **K1907934.**

The PAH data was corrected.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

We apologize for any inconvenience this may have created.

Please contact me if you have any questions. My extension is 3364. You may also contact me via email at howard.holmes@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

Howard Holmes
Project Manager

Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LOD	Limit of Detection
LOQ	Limit of Quantitation
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated value.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.
H	The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

#	The control limit criteria is not applicable. See case narrative.
J	The result is an estimated value.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.
Q	See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimated value.
J	The result is an estimated value.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at www.ALSGlobal.com or at the accreditation bodies web site.
Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/anlayte is offered by that state.

REVISED
2:22 pm, Oct 15, 2019

Client: Pacific Groundwater Group (PGG)
Project: Swan Island Lagoon Sediment Investigation
Sample Matrix: Soil, Water

Service Request: K1907934
Date Received: 08/29/2019

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier level IV requested by the client.

Sample Receipt:

Seventy five soil and two water samples were received for analysis at ALS Environmental on 08/29/2019. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Semivolatiles by GC/MS:

Method 8270D PAH SIM ULL, 09/10/2019: Insufficient sample mass was received to perform a Matrix Spike/Matrix Spike Duplicate (MS/MSD) with these sample batches. A Laboratory Control Sample/Duplicate Laboratory Control Sample (LCS/DLCS) as analyzed and reported in lieu of the MS/MSD for these samples.

Method 8270D PAH SIM ULL, 09/10/2019: The spike recovery of 2-Methylphenol, Benz(a)anthracene, Benzo(k)fluoranthene, and Chrysene for Duplicate Laboratory Control Sample (DLCS) KQ1912549-02 was outside the lower control criterion by 1-2%. One or more of the analytes in question were detected in the associated field samples. The error associated with reduced recovery indicated a potential low bias. Additional analysis of the associated field samples was not performed because insufficient sample remained for testing. The data was flagged to indicate the problem.

Method 8270D PAH SIM ULL, 09/10/2019: The detection limit was elevated for all analytes in many samples. The sample extract was diluted prior to instrumental analysis due to relatively high levels of non-target background components. The extract was highly colored and viscous, which indicated the need to perform a dilution prior to injection into the instrument. Clean-up of the extract was performed within the scope of the method, but did not eliminate enough of the background components to prevent dilution. The reporting limits were elevated to reflect the dilution.
Method 8270D PAH SIM, 09/03/2019: Insufficient sample mass was received to perform a Matrix Spike/Matrix Spike Duplicate (MS/MSD) with this sample batch. A Laboratory Control Sample/Duplicate Laboratory Control Sample (LCS/DLCS) as analyzed and reported in lieu of the MS/MSD for these samples.

Method ALS SOP, Organochlorine Pesticides by GC/MS/MS 09/10/2019: The upper control criterion was exceeded for 4,4'-DDD in Laboratory Control Sample (LCS) KQ1912412-01: 119, 78-114. The analyte in question was not detected in the associated field samples. The error associated with elevated recovery indicated a high bias. The sample data was not significantly affected. No further corrective action was appropriate.

Method ALS SOP, Organochlorine Pesticides by GC/MS/MS 09/10-18/2019: The internal standard recovery of Pyrene-d10 in several samples was outside control criteria because of matrix interference. The results of the internal standards are flagged on the Internal Standard Area and RT SUMMARY report and noted on the raw data Validation Reports. Corrections based on the Internal Standard resulted in acceptable recovery for all surrogate results. Additional corrective action was not possible.

General Chemistry:

No significant anomalies were noted with this analysis.

Approved by  Date 10/15/2019

Cooler Receipt and Preservation Form

Client Pacific Groundwater Group Service Request K1907934

Received: 8/29/19 Opened: 8/29/19 By: [illegible] Unloaded: 8/29/19 By: [illegible]

1. Samples were received via? *USPS* *Fed Ex* *UPS* *DHL* *PDX* *Courier* *Hand Delivered*
2. Samples were received in: (circle) *Cooler* *Box* *Envelope* *Other*_____ *NA*
3. Were custody seals on coolers? NA Y N If yes, how many and where?_____
   If present, were custody seals intact? Y N If present, were they signed and dated? Y N

Raw Cooler Temp	Corrected Cooler Temp	Raw Temp Blank	Corrected Temp Blank	Corr. Factor	Thermometer ID	Cooler/COC ID NA	Tracking Number NA	Filed
7.9	7.8	5.0	4.9	-0.1	385			
1.7	1.7	2.9	2.9	0	376			
5.6	5.2	3.6	3.2	-0.4	393			

4. Packing material: *Inserts* *Baggies* *Bubble Wrap* *Gel Packs* *Wet Ice* *Dry Ice* *Sleeves* _____
5. Were custody papers properly filled out (ink, signed, etc.)? NA Y N
6. Were samples received in good condition (temperature, unbroken)? *Indicate in the table below.* NA Y N
   If applicable, tissue samples were received: *Frozen* *Partially Thawed* *Thawed*
7. Were all sample labels complete (i.e analysis, preservation, etc.)? NA Y N
8. Did all sample labels and tags agree with custody papers? *Indicate major discrepancies in the table on page 2.* NA Y N
9. Were appropriate bottles/containers and volumes received for the tests indicated? NA Y N
10. Were the pH-preserved bottles (*see SMO GEN SOP*) received at the appropriate pH? *Indicate in the table below* NA Y N
11. Were VOA vials received without headspace? *Indicate in the table below.* NA Y N
12. Was C12/Res negative? NA Y N

Sample ID on Bottle	Sample ID on COC	Identified by:

Sample ID	Bottle Count Bottle Type	Out of Temp	Head-space	Broke	pH	Reagent	Volume added	Reagent Lot Number	Initials	Time

Notes, Discrepancies, & Resolutions: Sample labels & sample ID suggest sample date for "712-82819" is 8/28/19. COC lists 8/27/19. The same is true for H3-SC16-30to40-82919. Labels & ID have 8/29/19, COC lists date as 8/28/19

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Client:	Pacific Groundwater Group (PGG)	**Service Request:**	K1907934
Project:	Swan Island Lagoon Sediment Investigation/2006-00115	**Date Analyzed:**	09/11/19 16:06
Sample Matrix:	Soil	**Date Extracted:**	09/03/19

Lab Control Sample Summary
Organochlorine Pesticides by GC/MS/MS

Sample Name:	Lab Control Sample	**Instrument ID:**	K-MS-42
Lab Code:	KQ1912421-01	**File ID:**	J:\MS42\Data\091119\091119F004.D
Analysis Method:	ALS SOP	**Analysis Lot:**	650963,651916
Prep Method:	EPA 3541	**Extraction Lot:**	343644

This Lab Control Sample applies to the following analyses.

Sample Name	Lab Code	File ID	Date Analyzed

Continuing Calibration Verification (CCV) Summary
Organochlorine Pesticides by GC/MS/MS

Analysis Method:	ALS SOP	**Calibration Date:**	8/13/2019
File ID:	J:\MS42\Data\091819\091819F002.D	**Calibration ID:**	KC1900338
Signal ID:	1	**Analysis Lot:**	651916
		Units:	ng/mL

Analyte Name	Expected	Result	Average RF	CCV RF	% D	% Drift	Criteria	Curve Fit
2,4'-DDD	20.0	18.7	0.943	0.8794	-6.7	NA	±25	Average RF
2,4'-DDE	20.0	20.5	1.0151	1.0429	2.7	NA	±25	Average RF
2,4'-DDT	20.0	20.6	1.9438	1.999	2.8	NA	±25	Average RF
4,4'-DDD	20.0	20.7	1.566	1.512	NA	3.7	±25	Quadratic

SURROGATE RECOVERY SUMMARY
Polynuclear Aromatic Hydrocarbons by GC/MS SIM Ultra Low Level

Analysis Method: 8270D
Extraction Method: EPA 3541

Sample Name	Lab Code	Fluoranthene-d10 23-110	Fluorene-d10 26-102	Terphenyl-d14 27-115

QA/QC Report

Client:	Pacific Groundwater Group (PGG)	**Service Request:**	K1907934
Project:	Swan Island Lagoon Sediment Investigation/2006-00115	**Date Analyzed:**	09/10/19 22:51
Sample Matrix:	Soil	**Date Extracted:**	09/05/19

Method Blank Summary
Polynuclear Aromatic Hydrocarbons by GC/MS SIM Ultra Low Level

Sample Name:	Method Blank	**Instrument ID:**	K-MS-14
Lab Code:	KQ1912548-03	**File ID:**	J:\MS14\DATA\091019A\0910F038.D\
Analysis Method:	8270D	**Analysis Lot:**	650827
Prep Method:	EPA 3541	**Extraction Lot:**	343659

This Method Blank applies to the following analyses.

QA/QC Report

Client:	Pacific Groundwater Group (PGG)	**Service Request:**	K1907934
Project:	Swan Island Lagoon Sediment Investigation/2006-00115	**Date Analyzed:**	09/10/19 23:20
Sample Matrix:	Soil	**Date Extracted:**	09/05/19

Lab Control Sample Summary
Polynuclear Aromatic Hydrocarbons by GC/MS SIM Ultra Low Level

Sample Name:	Lab Control Sample	**Instrument ID:**	K-MS-14
Lab Code:	KQ1912548-01	**File ID:**	J:\MS14\DATA\091019A\0910F039.D\
Analysis Method:	8270D	**Analysis Lot:**	650827
Prep Method:	EPA 3541	**Extraction Lot:**	343659

This Lab Control Sample applies to the following analyses.

Sample Name	Lab Code	File ID	Date Analyzed
Method Blank	KQ1912548-03	J:\MS14\DATA\091019A\0910F038.D\	09/10/19 22:51

Narrative

CASE NARRATIVE
Client: Pacific Groundwater Group
Project: Swan Island Lagoon Sediment Investigation
Report Number: 580-88125-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) resulting from a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are an unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes within the calibration range of the instrument or that reduces the interferences thereby enabling the quantification of target analytes.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

These samples were previously received under various COCs and were archived per client request. The samples were activated on 7/26/2019; the samples were removed from the freezer to perform these analyses.

Receipt Exceptions

The following samples were frozen upon receipt by the laboratory. They were taken out of the freezer on 8/11, extracted the morning of 8/12, and then placed back into the freezer. Therefore the samples are within hold for analyses with the exception of Grainsize, TOC, Total Solids and Mercury. Mercury still has a 28-Day hold time if samples are frozen. Grainsize does not get frozen and this method has a 6 month hold time.TOC and Total Solids have 6 months if frozen. These analyses were activated after the hold times for these methods had expired. A1-0to30-102018 (580-88125-1), A2-0to26-100818 (580-88125-2), A3-0to31-100818 (580-88125-3), A4-0to25-100818 (580-88125-4), A5-0to25-100818 (580-88125-5), A6-0to23-100818 (580-88125-6), A7-0to26-100918 (580-88125-7), C4-0to27-100918 (580-88125-8), D2-0to19-101018 (580-88125-9), F2-0to19-101018 (580-88125-10), H2-0to30-101218 (580-88125-12), J2A3-0to18-101218 (580-88125-13), M4-0to26-101918 (580-88125-14), 515-0to26-101918 (580-88125-15), N5-0to28-101418 (580-88125-16), N7-0to27-101418 (580-88125-17), O7-0to27-101918 (580-88125-18), Q2-0to13-101818 (580-88125-19), Q6-0to27-102018 (580-88125-20), T6-0to29-101618 (580-88125-21), (580-88125-A-10 MS) and (580-88125-A-10 MSD)

One or more containers for the following samples were broken in storage: A1-0to30-102018 (580-88125-1), H2-0to30-101218 (580-88125-12) and M4-0to26-101918 (580-88125-14). They have been taken to disposal and destroyed. Analysts have found enough back up sample for their analyses.

This report contains all data with the exception of the 1668A PCB Congeners, being performed at Eurofins TestAmerica Knoxville. This data will be reported under separate cover.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

DIOXIN/ FURAN

Samples A1-0to30-102018 (580-88125-1), A2-0to26-100818 (580-88125-2), A3-0to31-100818 (580-88125-3), A4-0to25-100818 (580-88125-4), A5-0to25-100818 (580-88125-5), A6-0to23-100818 (580-88125-6), A7-0to26-100918 (580-88125-7), C4-0to27-100918 (580-88125-8), D2-0to19-101018 (580-88125-9), F2-0to19-101018 (580-88125-10), G6-0to27-101818 (580-88125-11), H2-0to30-101218 (580-88125-12), J2A3-0to18-101218 (580-88125-13), M4-0to26-101918 (580-88125-14), 515-0to26-101918 (580-88125-15),

Job ID: 580-88125-1 (Continued)

Laboratory: Eurofins TestAmerica, Seattle (Continued)

N5-0to28-101418 (580-88125-16), N7-0to27-101418 (580-88125-17), O7-0to27-101918 (580-88125-18), Q2-0to13-101818 (580-88125-19), Q6-0to27-102018 (580-88125-20) and T6-0to29-101618 (580-88125-21) were analyzed for Dioxin/ Furan in accordance with 1613B. The samples were prepared on 08/14/2019 and analyzed on 08/17/2019, 08/19/2019, 08/20/2019 and 08/21/2019.

OCDD was detected in method blank MB 320-315077/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

1,2,3,4,7,8-HxCDD, OCDD and Total HxCDD were detected in method blank MB 320-315080/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

1,2,3,4,6,7,8-HpCDF, 1,2,3,6,7,8-HxCDD, 1,2,3,7,8-PeCDD, 1,2,3,7,8-PeCDF and 2,3,4,7,8-PeCDF failed the recovery criteria low for LCSSRM 320-315077/4-A. 1,2,3,6,7,8-HxCDD, 1,2,3,7,8-PeCDD, 1,2,3,7,8-PeCDF and 2,3,4,7,8-PeCDF failed the recovery criteria low for LCSSRM 320-315077/5-A.

2,3,7,8-TCDD failed the recovery criteria high. 1,2,3,6,7,8-HxCDD failed the recovery criteria low for LCSSRM 320-315080/4-A. Refer to the QC report for details.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

POLYCHLORINATED BIPHENYLS (PCBS)

Samples A1-0to30-102018 (580-88125-1), A2-0to26-100818 (580-88125-2), A3-0to31-100818 (580-88125-3), A4-0to25-100818 (580-88125-4), A5-0to25-100818 (580-88125-5), A6-0to23-100818 (580-88125-6), A7-0to26-100918 (580-88125-7), C4-0to27-100918 (580-88125-8), D2-0to19-101018 (580-88125-9), F2-0to19-101018 (580-88125-10), G6-0to27-101818 (580-88125-11), H2-0to30-101218 (580-88125-12), J2A3-0to18-101218 (580-88125-13), M4-0to26-101918 (580-88125-14), 515-0to26-101918 (580-88125-15), N5-0to28-101418 (580-88125-16), N7-0to27-101418 (580-88125-17), O7-0to27-101918 (580-88125-18), Q2-0to13-101818 (580-88125-19), Q6-0to27-102018 (580-88125-20) and T6-0to29-101618 (580-88125-21) were analyzed for polychlorinated biphenyls (PCBs) in accordance with EPA sw-846 method 8082A. The samples were prepared on 08/13/2019 and analyzed on 08/15/2019 and 08/16/2019.

Surrogate recovery for the following samples were outside control limits: A2-0to26-100818 (580-88125-2), A4-0to25-100818 (580-88125-4), A6-0to23-100818 (580-88125-6), A7-0to26-100918 (580-88125-7), C4-0to27-100918 (580-88125-8), D2-0to19-101018 (580-88125-9), and F2-0to19-101018 (580-88125-10). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis were not performed.

Internal standard (ISTD) response for the following sample exceeded the control limit on Column ZB-CLPesticides-1 and ZB-CLPesticides-2: J2A3-0to18-101218 (580-88125-13). As such, the sample results associated with this ISTD were reported from the other column, which met ISTD acceptance criteria.

The continuing calibration verification (CCV) associated with batch 580-308439 recovered above the upper control limit for PCB-1232. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: G6-0to27-101818 (580-88125-11), H2-0to30-101218 (580-88125-12), J2A3-0to18-101218 (580-88125-13), M4-0to26-101918 (580-88125-14), 515-0to26-101918 (580-88125-15), N5-0to28-101418 (580-88125-16), N7-0to27-101418 (580-88125-17), O7-0to27-101918 (580-88125-18), Q2-0to13-101818 (580-88125-19), Q6-0to27-102018 (580-88125-20), T6-0to29-101618 (580-88125-21) and (CCV 580-308439/3).

The continuing calibration verification (CCV) associated with 580-308439 recovered high and outside the control limits for PCB-1221 on one column. Results are confirmed on both columns and reported from the passing column. The following samples are impacted: G6-0to27-101818 (580-88125-11), H2-0to30-101218 (580-88125-12), J2A3-0to18-101218 (580-88125-13), M4-0to26-101918 (580-88125-14), N5-0to28-101418 (580-88125-16), N7-0to27-101418 (580-88125-17), O7-0to27-101918 (580-88125-18), Q2-0to13-101818 (580-88125-19), Q6-0to27-102018 (580-88125-20), T6-0to29-101618 (580-88125-21) and (CCV 580-308439/6).

The continuing calibration verification (CCV) associated with batch 580-308552 recovered above the upper control limit for PCB-1232,

Job ID: 580-88125-1 (Continued)

Laboratory: Eurofins TestAmerica, Seattle (Continued)

PCB-1016 and PCB-1260. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: A5-0to25-100818 (580-88125-5), (CCV 580-308552/13), (CCV 580-308552/3) and (CCVIS 580-308552/7).

The continuing calibration verification (CCV) associated with 580-308552 recovered high and outside the control limits for PCB-1221 on one column. Results are confirmed on both columns and reported from the passing column. The following samples are impacted: A5-0to25-100818 (580-88125-5) and (CCV 580-308552/6).

The following continuing calibration verification (CCV) standard associated with batch 580-308552 recovered outside acceptance criteria for %D for surrogate DCB Decachlorobiphenyl and Tetrachloro-m-xylene. Since all the other surrogates were within %D criteria; therefore, the data have been reported. The following samples are impacted: (CCV 580-308552/13) and (CCVIS 580-308552/7).

The following closing continuing calibration verification (CCV) and continuing calibration blank (CCB) standard associated with batch 580-308552 failed to meet acceptance limits for Tetrachloro-m-xylene and DCB Decachlorobiphenyl. The associated samples were analyzed following a successful CCV, indicating that the sample matrix is adversely affecting the instrument and causing the failures.

Due to the high concentration, PCB-1260 failed the recovery criteria high for the MS of sample G6-0to27-101818MS (580-88125-11) in batch 580-308439. PCB-1260 failed the recovery criteria low for the MSD of sample G6-0to27-101818MSD (580-88125-11) in batch 580-308439. PCB-1260 exceeded the RPD limit. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

In analytical batch 580-308439, the %RPD between the primary and confirmation column exceeded 40% for PCB-1260 and PCB-1254 for the following sample(s): G6-0to27-101818 (580-88125-11[1.0]), H2-0to30-101218 (580-88125-12[1.0]), M4-0to26-101918 (580-88125-14[1.0]), N7-0to27-101418 (580-88125-17[1.0]), O7-0to27-101918 (580-88125-18[1.0]), (580-88125-D-11-D MS) and (580-88125-D-11-E MSD). The lower value(s) has been reported in accordance with the laboratory's SOP.

%RPD between the primary and confirmation column exceeded 40% for some analytes for the following sample: A4-0to25-100818 (580-88125-4[3.0]). The lower values have been reported in accordance with the laboratory's SOP.

The following samples required a TBA clean-up to reduce matrix interferences caused by sulfur: A1-0to30-102018 (580-88125-1), A1-0to30-102018 MS (580-88125-1 MS), A1-0to30-102018 MSD (580-88125-1 MSD), A2-0to26-100818 (580-88125-2), A3-0to31-100818 (580-88125-3), A4-0to25-100818 (580-88125-4), A6-0to23-100818 (580-88125-6), A7-0to26-100918 (580-88125-7), C4-0to27-100918 (580-88125-8), D2-0to19-101018 (580-88125-9), F2-0to19-101018 (580-88125-10), G6-0to27-101818 (580-88125-11), G6-0to27-101818 MS (580-88125-11 MS), G6-0to27-101818 MSD (580-88125-11 MSD), H2-0to30-101218 (580-88125-12), J2A3-0to18-101218 (580-88125-13), M4-0to26-101918 (580-88125-14), N5-0to28-101418 (580-88125-16), N7-0to27-101418 (580-88125-17), O7-0to27-101918 (580-88125-18), Q2-0to13-101818 (580-88125-19), Q6-0to27-102018 (580-88125-20), T6-0to29-101618 (580-88125-21), (LCS 580-308204/2-A), and (MB 580-308204/1-A).

Sample A4-0to25-100818 (580-88125-4)[3X] required dilution prior to analysis to bring the concentration of target analytes within the calibration range. The reporting limits have been adjusted accordingly.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DIESEL AND EXTENDED RANGE ORGANICS

Samples A1-0to30-102018 (580-88125-1), A2-0to26-100818 (580-88125-2), A3-0to31-100818 (580-88125-3), A4-0to25-100818 (580-88125-4), A5-0to25-100818 (580-88125-5), A6-0to23-100818 (580-88125-6), A7-0to26-100918 (580-88125-7), C4-0to27-100918 (580-88125-8), D2-0to19-101018 (580-88125-9), F2-0to19-101018 (580-88125-10), G6-0to27-101818 (580-88125-11), H2-0to30-101218 (580-88125-12), J2A3-0to18-101218 (580-88125-13), M4-0to26-101918 (580-88125-14), 515-0to26-101918 (580-88125-15), N5-0to28-101418 (580-88125-16), N7-0to27-101418 (580-88125-17), O7-0to27-101918 (580-88125-18), Q2-0to13-101818 (580-88125-19), Q6-0to27-102018 (580-88125-20) and T6-0to29-101618 (580-88125-21) were analyzed for diesel and extended range organics in accordance with Method NWTPH-Dx. The samples were prepared on 08/12/2019 and 08/13/2019 and analyzed on 08/14/2019 and 08/15/2019.

Surrogate recovery for the following samples were outside control limits: A6-0to23-100818 (580-88125-6) and J2A3-0to18-101218 (580-88125-13). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis were not performed.

Job ID: 580-88125-1 (Continued)

Laboratory: Eurofins TestAmerica, Seattle (Continued)

The following samples contained a hydrocarbon pattern in the diesel range; however, the elution pattern was later than the typical diesel fuel pattern used by the laboratory for quantitative purposes: A1-0to30-102018 (580-88125-1), A2-0to26-100818 (580-88125-2), A3-0to31-100818 (580-88125-3), A4-0to25-100818 (580-88125-4), A5-0to25-100818 (580-88125-5), A6-0to23-100818 (580-88125-6), A7-0to26-100918 (580-88125-7), C4-0to27-100918 (580-88125-8), D2-0to19-101018 (580-88125-9), F2-0to19-101018 (580-88125-10), G6-0to27-101818 (580-88125-11), G6-0to27-101818 DU (580-88125-11 DU), H2-0to30-101218 (580-88125-12), J2A3-0to18-101218 (580-88125-13), M4-0to26-101918 (580-88125-14), 515-0to26-101918 (580-88125-15), N5-0to28-101418 (580-88125-16), N7-0to27-101418 (580-88125-17), O7-0to27-101918 (580-88125-18), Q2-0to13-101818 (580-88125-19), Q6-0to27-102018 (580-88125-20) and T6-0to29-101618 (580-88125-21).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

METALS (ICPMS)

Samples A1-0to30-102018 (580-88125-1), A2-0to26-100818 (580-88125-2), A3-0to31-100818 (580-88125-3), A4-0to25-100818 (580-88125-4), A5-0to25-100818 (580-88125-5), A6-0to23-100818 (580-88125-6), A7-0to26-100918 (580-88125-7), C4-0to27-100918 (580-88125-8), D2-0to19-101018 (580-88125-9), F2-0to19-101018 (580-88125-10), G6-0to27-101818 (580-88125-11), H2-0to30-101218 (580-88125-12), J2A3-0to18-101218 (580-88125-13), M4-0to26-101918 (580-88125-14), 515-0to26-101918 (580-88125-15), N5-0to28-101418 (580-88125-16), N7-0to27-101418 (580-88125-17), O7-0to27-101918 (580-88125-18), Q2-0to13-101818 (580-88125-19), Q6-0to27-102018 (580-88125-20) and T6-0to29-101618 (580-88125-21) were analyzed for Metals (ICPMS) in accordance with 6020A_LL. The samples were prepared on 08/09/2019 and 08/14/2019 and analyzed on 08/13/2019 and 08/14/2019.

Lead was detected in method blank MB 580-308354/6-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Because the result concentration was less than ½ the reporting limit, no corrective action was performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL MERCURY

Samples A1-0to30-102018 (580-88125-1), A2-0to26-100818 (580-88125-2), A3-0to31-100818 (580-88125-3), A4-0to25-100818 (580-88125-4), A5-0to25-100818 (580-88125-5), A6-0to23-100818 (580-88125-6), A7-0to26-100918 (580-88125-7), C4-0to27-100918 (580-88125-8), D2-0to19-101018 (580-88125-9), F2-0to19-101018 (580-88125-10), G6-0to27-101818 (580-88125-11), H2-0to30-101218 (580-88125-12), J2A3-0to18-101218 (580-88125-13), M4-0to26-101918 (580-88125-14), 515-0to26-101918 (580-88125-15), N5-0to28-101418 (580-88125-16), N7-0to27-101418 (580-88125-17), O7-0to27-101918 (580-88125-18), Q2-0to13-101818 (580-88125-19), Q6-0to27-102018 (580-88125-20) and T6-0to29-101618 (580-88125-21) were analyzed for total mercury in accordance with EPA SW-846 Method 7471A. The samples were prepared on 08/14/2019 and analyzed on 08/14/2019 and 08/15/2019.

Mercury failed the recovery criteria high for the MS of sample A1-0to30-102018MS (580-88125-1) in batch 580-308412. Mercury failed the recovery criteria high for the MSD of sample A1-0to30-102018MSD (580-88125-1) in batch 580-308412. The associated LCS and LCSD recoveries met acceptance limits.

Mercury exceeded the RPD limit for the duplicate of sample A1-0to30-102018DU (580-88125-1).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PUGET SOUND ESTUARY PROGRAM TOTAL ORGANIC CARBON

Samples A1-0to30-102018 (580-88125-1), A2-0to26-100818 (580-88125-2), A3-0to31-100818 (580-88125-3), A4-0to25-100818 (580-88125-4), A5-0to25-100818 (580-88125-5), A6-0to23-100818 (580-88125-6), A7-0to26-100918 (580-88125-7), C4-0to27-100918 (580-88125-8), D2-0to19-101018 (580-88125-9), F2-0to19-101018 (580-88125-10), G6-0to27-101818 (580-88125-11), H2-0to30-101218 (580-88125-12), J2A3-0to18-101218 (580-88125-13), M4-0to26-101918 (580-88125-14), 515-0to26-101918 (580-88125-15), N5-0to28-101418 (580-88125-16), N7-0to27-101418 (580-88125-17), O7-0to27-101918 (580-88125-18), Q2-0to13-101818 (580-88125-19), Q6-0to27-102018 (580-88125-20) and T6-0to29-101618 (580-88125-21) were analyzed for Puget Sound Estuary Program total organic carbon in accordance with EPA SW-846 Method 9060, modified to meet the Puget Sound Estuary Program requirements. The samples were analyzed on 08/18/2019.

Total Organic Carbon - Duplicates was detected in method blank MB 580-308680/3 at a level that was above the method detection limit

Job ID: 580-88125-1 (Continued)

Laboratory: Eurofins TestAmerica, Seattle (Continued)

but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Because the result concentration was less than ½ the reporting limit, no corrective action was performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GRAIN SIZE

Samples A1-0to30-102018 (580-88125-1), A2-0to26-100818 (580-88125-2), A3-0to31-100818 (580-88125-3), A4-0to25-100818 (580-88125-4), A5-0to25-100818 (580-88125-5), A6-0to23-100818 (580-88125-6), A7-0to26-100918 (580-88125-7), C4-0to27-100918 (580-88125-8), D2-0to19-101018 (580-88125-9), F2-0to19-101018 (580-88125-10), G6-0to27-101818 (580-88125-11), H2-0to30-101218 (580-88125-12), J2A3-0to18-101218 (580-88125-13), M4-0to26-101918 (580-88125-14), 515-0to26-101918 (580-88125-15), N5-0to28-101418 (580-88125-16), N7-0to27-101418 (580-88125-17), O7-0to27-101918 (580-88125-18), Q2-0to13-101818 (580-88125-19), Q6-0to27-102018 (580-88125-20) and T6-0to29-101618 (580-88125-21) were analyzed for grain size in accordance with ASTM D7928 & D6913. The samples were analyzed on 08/06/2019.

Coarse Sand and Medium Sand exceeded the RPD limit for the duplicate of sample G6-0to27-101818DU (580-88125-11).

Coarse Sand exceeded the RPD limit for the duplicate of sample A1-0to30-102018DU (580-88125-1).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

SPECIFIC GRAVITY

Samples A1-0to30-102018 (580-88125-1), A2-0to26-100818 (580-88125-2), A3-0to31-100818 (580-88125-3), A4-0to25-100818 (580-88125-4), A5-0to25-100818 (580-88125-5), A6-0to23-100818 (580-88125-6), A7-0to26-100918 (580-88125-7), C4-0to27-100918 (580-88125-8), D2-0to19-101018 (580-88125-9), F2-0to19-101018 (580-88125-10), G6-0to27-101818 (580-88125-11), H2-0to30-101218 (580-88125-12), J2A3-0to18-101218 (580-88125-13), M4-0to26-101918 (580-88125-14), 515-0to26-101918 (580-88125-15), N5-0to28-101418 (580-88125-16), N7-0to27-101418 (580-88125-17), O7-0to27-101918 (580-88125-18), Q2-0to13-101818 (580-88125-19), Q6-0to27-102018 (580-88125-20) and T6-0to29-101618 (580-88125-21) were analyzed for specific gravity in accordance with ASTM D854. The samples were analyzed on 08/13/2019 and 08/14/2019.

The density (or specific gravity) of the samples was determined using SOP number KNOX-WC-0015, based on ASTM Methods D1475 (replaced D1963) and D854. A Hubbard-Carmick type pycnometer is tared on a four-place analytical balance. The pycnometer filled with water is weighed to calibrate the volume at the desired temperature. The pycnometer filled with sample is weighed to determine the weight of the sample at the calibrated volume. The standard temperature for this procedure is 25ºC. The density and specific gravity of the material are calculated using the following equations:

d(SAMP) = [C(T) - A] / V(T)

Where:
d(SAMP) = Density of the liquid sample at temperature T, g/cm3
C(T) = Weight of pycnometer filled with sample at temperature T, g
A = Weight of pycnometer, g
V(T) = Volume of pycnometer at temperature T, cm3

d(SAMP) = [C(T) - A] / [V(T) - [(D(T) - C(T)) / dH2O(T)]]

Where:
d(SAMP) = Density of the solid sample at temperature T, g/cm3
D(T) = Weight of pycnometer filled with water and an aliquot of the sample at temperature T, g
C(T) = Weight of pycnometer partially filled with an aliquot of the sample at temperature T, g
A = Weight of pycnometer, g
dH2O(T) = Density of pure water at temperature T, g/cm3
V(T) = Volume of pycnometer at temperature T, cm3

S(T) = d(SAMP) / dH2O(T)

Job ID: 580-88125-1 (Continued)

Laboratory: Eurofins TestAmerica, Seattle (Continued)

Where:
S(T) = Specific gravity of the sample at temperature T, unitless
d(SAMP) = Density of the sample at temperature T, g/cm3
dH2O(T) = Density of pure water at temperature T, g/cm3
T = Temperature of analysis

Conversion factors:
1 lb/gal = 0.1198 g/cm3
1 Kg/cu. m = 0.001 g/cm3

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PERCENT SOLIDS

Samples A1-0to30-102018 (580-88125-1), A2-0to26-100818 (580-88125-2), A3-0to31-100818 (580-88125-3), A4-0to25-100818 (580-88125-4), A5-0to25-100818 (580-88125-5), A6-0to23-100818 (580-88125-6), A7-0to26-100918 (580-88125-7), C4-0to27-100918 (580-88125-8), D2-0to19-101018 (580-88125-9), F2-0to19-101018 (580-88125-10), G6-0to27-101818 (580-88125-11), H2-0to30-101218 (580-88125-12), J2A3-0to18-101218 (580-88125-13), M4-0to26-101918 (580-88125-14), 515-0to26-101918 (580-88125-15), N5-0to28-101418 (580-88125-16), N7-0to27-101418 (580-88125-17), O7-0to27-101918 (580-88125-18), Q2-0to13-101818 (580-88125-19), Q6-0to27-102018 (580-88125-20) and T6-0to29-101618 (580-88125-21) were analyzed for percent solids in accordance with ASTM D2216. The samples were analyzed on 08/13/2019.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL SOLIDS @ 70C

Samples A1-0to30-102018 (580-88125-1), A2-0to26-100818 (580-88125-2), A3-0to31-100818 (580-88125-3), A4-0to25-100818 (580-88125-4), A5-0to25-100818 (580-88125-5), A6-0to23-100818 (580-88125-6), A7-0to26-100918 (580-88125-7), C4-0to27-100918 (580-88125-8), D2-0to19-101018 (580-88125-9), F2-0to19-101018 (580-88125-10), G6-0to27-101818 (580-88125-11), H2-0to30-101218 (580-88125-12), J2A3-0to18-101218 (580-88125-13), M4-0to26-101918 (580-88125-14), 515-0to26-101918 (580-88125-15), N5-0to28-101418 (580-88125-16), N7-0to27-101418 (580-88125-17), O7-0to27-101918 (580-88125-18), Q2-0to13-101818 (580-88125-19), Q6-0to27-102018 (580-88125-20) and T6-0to29-101618 (580-88125-21) were analyzed for Total Solids @ 70C in accordance with Moisture @ 70C. The samples were analyzed on 08/21/2019.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifiers

GC Semi VOA

Qualifier	Qualifier Description
E	Result exceeded calibration range.
F1	MS and/or MSD Recovery is outside acceptance limits.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.
X	Surrogate is outside control limits

Dioxin

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
B	Compound was found in the blank and sample.
E	Result exceeded calibration range.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.

Metals

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
F1	MS and/or MSD Recovery is outside acceptance limits.
F5	Duplicate RPD exceeds limit, and one or both sample results are less than 5 times RL. The data are considered valid because the absolute difference is less than the RL.
H	Sample was prepped or analyzed beyond the specified holding time
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
H	Sample was prepped or analyzed beyond the specified holding time
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Geotechnical

Qualifier	Qualifier Description
F3	Duplicate RPD exceeds the control limit
H	Sample was prepped or analyzed beyond the specified holding time

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE
Client: Pacific Groundwater Group
Project: Swan Island Lagoon Sediment Investigation
Report Number: 580-88125-2

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) resulting from a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are an unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes within the calibration range of the instrument or that reduces the interferences thereby enabling the quantification of target analytes.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

Twenty-one samples were activated from archived samples on 7/26/2019 1:10 PM; the samples were previously frozen prior to activation. This report contains results for PBC Congeners by Method 1668A, performed at Eurofins TestAmerica Knoxville. All other added analyses have been reported under separate cover.

Receipt Exceptions

All of the containers for the samples in this job (except for the grain size containers) were kept in the freezer prior to being logged in for analyses.

A1-0to30-102018 (580-88125-1), A2-0to26-100818 (580-88125-2), A3-0to31-100818 (580-88125-3), A4-0to25-100818 (580-88125-4), A5-0to25-100818 (580-88125-5), A6-0to23-100818 (580-88125-6), A7-0to26-100918 (580-88125-7), C4-0to27-100918 (580-88125-8), D2-0to19-101018 (580-88125-9), F2-0to19-101018 (580-88125-10), G6-0to27-101818 (580-88125-11), H2-0to30-101218 (580-88125-12), J2A3-0to18-101218 (580-88125-13), M4-0to26-101918 (580-88125-14), 515-0to26-101918 (580-88125-15), N5-0to28-101418 (580-88125-16), N7-0to27-101418 (580-88125-17), O7-0to27-101918 (580-88125-18), Q2-0to13-101818 (580-88125-19), Q6-0to27-102018 (580-88125-20) and T6-0to29-101618 (580-88125-21)

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

POLYCHLORINATED BIPHENYLS CONGENERS (PCBS)

Samples A1-0to30-102018 (580-88125-1), A2-0to26-100818 (580-88125-2), A3-0to31-100818 (580-88125-3), A4-0to25-100818 (580-88125-4), A5-0to25-100818 (580-88125-5), A6-0to23-100818 (580-88125-6), A7-0to26-100918 (580-88125-7), C4-0to27-100918 (580-88125-8), D2-0to19-101018 (580-88125-9), F2-0to19-101018 (580-88125-10), G6-0to27-101818 (580-88125-11), H2-0to30-101218 (580-88125-12), J2A3-0to18-101218 (580-88125-13), M4-0to26-101918 (580-88125-14), 515-0to26-101918 (580-88125-15), N5-0to28-101418 (580-88125-16), N7-0to27-101418 (580-88125-17), O7-0to27-101918 (580-88125-18), Q2-0to13-101818 (580-88125-19), Q6-0to27-102018 (580-88125-20) and T6-0to29-101618 (580-88125-21) were analyzed for polychlorinated biphenyls congeners (PCBs) in accordance with EPA Method 1668A. The samples were prepared on 08/19/2019 and 08/20/2019 and analyzed on 08/27/2019, 08/29/2019, 08/30/2019, 09/03/2019 and 09/04/2019.

Several analytes were detected in method blank MB 140-32775/15-B at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the

Job ID: 580-88125-2 (Continued)

Laboratory: Eurofins TestAmerica, Seattle (Continued)

MDL and/or RL, the result has been flagged.

Polychlorinated biphenyls, Total was detected in method blank MB 140-32817/16-B at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Several analytes were detected in method blank MB 140-32817/16-B at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

The following samples exhibited elevated noise or matrix interferences for one or more analytes causing elevation of the detection limit (EDL): A3-0to31-100818 (580-88125-3), A4-0to25-100818 (580-88125-4), A5-0to25-100818 (580-88125-5), A6-0to23-100818 (580-88125-6), A7-0to26-100918 (580-88125-7), and G6-0to27-101818 (580-88125-11). The reporting limit (RL) for the affected analytes has been raised to be equal to the EDL, and a "G" qualifier applied.

The following samples went through Gel-Permeation Cleanup procedure, based on EPA method 3640A: A1-0to30-102018 (580-88125-1), A2-0to26-100818 (580-88125-2), A3-0to31-100818 (580-88125-3), A4-0to25-100818 (580-88125-4), A5-0to25-100818 (580-88125-5), A6-0to23-100818 (580-88125-6), A7-0to26-100918 (580-88125-7), C4-0to27-100918 (580-88125-8), D2-0to19-101018 (580-88125-9), F2-0to19-101018 (580-88125-10), G6-0to27-101818 (580-88125-11), H2-0to30-101218 (580-88125-12), J2A3-0to18-101218 (580-88125-13), M4-0to26-101918 (580-88125-14), 515-0to26-101918 (580-88125-15), N5-0to28-101418 (580-88125-16), N7-0to27-101418 (580-88125-17), O7-0to27-101918 (580-88125-18), Q2-0to13-101818 (580-88125-19), Q6-0to27-102018 (580-88125-20) and T6-0to29-101618 (580-88125-21).

Samples A5-0to25-100818 (580-88125-5)[2X], A7-0to26-100918 (580-88125-7)[5X] and N5-0to28-101418 (580-88125-16)[2X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifiers

Dioxin

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
C	The compound co-eluted with other compounds
C108	The compound co-eluted with PCB-108
C110	The compound co-eluted with PCB-110
C12	The compound co-eluted with PCB-12
C128	The compound co-eluted with PCB-128
C129	The compound co-eluted with PCB-129
C134	The compound co-eluted with PCB-134
C135	The compound co-eluted with PCB-135
C139	The compound co-eluted with PCB-139
C147	The compound co-eluted with PCB-147
C153	The compound co-eluted with PCB-153
C156	The compound co-eluted with PCB-156
C171	The compound co-eluted with PCB-171
C18	The compound co-eluted with PCB-18
C180	The compound co-eluted with PCB-180
C183	The compound co-eluted with PCB-183
C198	The compound co-eluted with PCB-198
C20	The compound co-eluted with PCB-20
C21	The compound co-eluted with PCB-21
C26	The compound co-eluted with PCB-26
C40	The compound co-eluted with PCB-40
C43	The compound co-eluted with PCB-43
C44	The compound co-eluted with PCB-44
C45	The compound co-eluted with PCB-45
C49	The compound co-eluted with PCB-49
C50	The compound co-eluted with PCB-50
C59	The compound co-eluted with PCB-59
C61	The compound co-eluted with PCB-61
C83	The compound co-eluted with PCB-83
C85	The compound co-eluted with PCB-85
C86	The compound co-eluted with PCB-86
C88	The compound co-eluted with PCB-88
C90	The compound co-eluted with PCB-90
C93	The compound co-eluted with PCB-93
C98	The compound co-eluted with PCB-98
G	The reported quantitation limit has been raised due to an exhibited elevated noise or matrix interference
I	Value is EMPC (estimated maximum possible concentration).
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.
S	Ion suppression

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Client Sample ID: A1-0to30-102018
Lab Sample ID: 580-88125-1

Date Collected: 10/20/18 12:05
Matrix: Solid

Date Received: 07/26/19 13:10
Percent Solids: 55.1

Method: 1668A - Chlorinated Biphenyl Congeners (HRGC/HRMS)

Client: Pacific Groundwater Group
Project/Site: Swan Island Lagoon Sediment Investigatio

Job ID: 580-88125-2

Client Sample ID: A2-0to26-100818
Date Collected: 10/08/18 14:04
Date Received: 07/26/19 13:10

Lab Sample ID: 580-88125-2
Matrix: Solid
Percent Solids: 31.7

Method: 1668A - Chlorinated Biphenyl Congeners (HRGC/HRMS) (Continued)

Client: Pacific Groundwater Group
Job ID: 580-88125-2
Project/Site: Swan Island Lagoon Sediment Investigatio

Client Sample ID: C4-0to27-100918
Lab Sample ID: 580-88125-8
Date Collected: 10/09/18 08:28
Matrix: Solid
Date Received: 07/26/19 13:10
Percent Solids: 37.5

Method: 1668A - Chlorinated Biphenyl Congeners (HRGC/HRMS) (Continued)

Isotope Dilution	%Recovery	Qualifier	Limits	Prepared	Analyzed	Dil Fac

Client: Pacific Groundwater Group
Job ID: 580-88125-2
Project/Site: Swan Island Lagoon Sediment Investigatio

Client Sample ID: D2-0to19-101018
Lab Sample ID: 580-88125-9
Date Collected: 10/10/18 15:21
Matrix: Solid
Date Received: 07/26/19 13:10
Percent Solids: 70.6

Method: 1668A - Chlorinated Biphenyl Congeners (HRGC/HRMS) (Continued)

Client: Pacific Groundwater Group
Project/Site: Swan Island Lagoon Sediment Investigatio

Job ID: 580-88125-2

Client Sample ID: H2-0to30-101218
Date Collected: 10/12/18 10:28
Date Received: 07/26/19 13:10

Lab Sample ID: 580-88125-12
Matrix: Solid
Percent Solids: 42.1

Method: 1668A - Chlorinated Biphenyl Congeners (HRGC/HRMS) (Continued)

Client: Pacific Groundwater Group
Project/Site: Swan Island Lagoon Sediment Investigatio

Job ID: 580-88125-2

Client Sample ID: Q6-0to27-102018
Date Collected: 10/20/18 09:19
Date Received: 07/26/19 13:10

Lab Sample ID: 580-88125-20
Matrix: Solid
Percent Solids: 30.5

Method: 1668A - Chlorinated Biphenyl Congeners (HRGC/HRMS) (Continued)

580-88125 Chain of Custody

Note: Since laboratory accreditations are subject to change, TestAmerica Laboratories, Inc. places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to TestAmerica Laboratories, Inc. attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to TestAmerica Laboratories, Inc.

Note: Since laboratory accreditations are subject to change, TestAmerica Laboratories, Inc. places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to TestAmerica Laboratories, Inc. attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to TestAmerica Laboratories, Inc.

Possible Hazard Identification	Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)
Unconfirmed	☐ Return To Client ☐ Disposal By Lab ☐ Archive For _____ Months
Deliverable Requested: I, II, III, IV, Other (specify) Primary Deliverable Rank: 2	Special Instructions/QC Requirements:

Narrative

CASE NARRATIVE
Client: Pacific Groundwater Group
Project: Swan Island Lagoon Sediment Investigation
Report Number: 580-88908-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) resulting from a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are an unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes within the calibration range of the instrument or that reduces the interferences thereby enabling the quantification of target analytes.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT
The samples were received on 9/3/2019 3:00 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 3.3º C and 5.2º C.

Receipt Exceptions

The container label for the following sample did not match the information listed on the Chain-of-Custody (COC): 712-82819 (580-88908-75). The container labels list the sampling date 8/28/19, while the COC lists 8/27/19 even though the ID incorporates the correct date (8/28/19). The sample is logged in per container labels.

The Client requested that we relinquish the archive container for the following samples to ARI: H3-SC1b-20to30-82819 (580-88908-1), J3-SC1b-30to40-82719 (580-88908-38) and J3-SC1b-40to50-82719 (580-88908-39). These were picked up by the ARI courier on 9/12 and a copy of the COC was attached to the job for reference.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

POLYCHLORINATED BIPHENYLS CONGENERS (PCBS)
Samples J5-SC1b-20to30-82719 (580-88908-26), J5-SC1b-30to40-82719 (580-88908-27), J5-SC1b-40to50-82719 (580-88908-28), J5-SC1b-50to60-82719 (580-88908-29), J5-SC1b-60to70-82719 (580-88908-30), J5-SC1b-70to80-82719 (580-88908-31), J5-SC1b-80to90-82719 (580-88908-32), J5-SC1b-90to100-82719 (580-88908-33), J5-SC1b-100to110-82719 (580-88908-34), J5-SC1b-00to10-82719 (580-88908-35) and J5-SC1b-10to20-82719 (580-88908-36) were analyzed for polychlorinated biphenyls congeners (PCBs) in accordance with EPA Method 1668A. The samples were prepared on 09/17/2019 and 10/03/2019 and analyzed on 09/26/2019, 10/03/2019, 10/04/2019, 10/09/2019, 10/10/2019 and 10/11/2019.

The following samples went through Gel-Permeation Cleanup procedure, based on EPA method 3640A: J5-SC1b-20to30-82719 (580-88908-26), J5-SC1b-30to40-82719 (580-88908-27), J5-SC1b-40to50-82719 (580-88908-28), J5-SC1b-50to60-82719 (580-88908-29), J5-SC1b-60to70-82719 (580-88908-30), J5-SC1b-70to80-82719 (580-88908-31), J5-SC1b-80to90-82719 (580-88908-32), J5-SC1b-90to100-82719 (580-88908-33), J5-SC1b-100to110-82719 (580-88908-34), J5-SC1b-00to10-82719 (580-88908-35), and J5-SC1b-10to20-82719 (580-88908-36).

Several analytes were detected in method blank MB 140-33628/12-B at levels that were above the method detection limit but below the

Job ID: 580-88908-1 (Continued)

Laboratory: Eurofins TestAmerica, Seattle (Continued)

reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Polychlorinated biphenyls, Total was detected in method blank MB 140-34150/12-B at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Several analytes were detected in method blank MB 140-34150/12-B at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

The Method Blank and Laboratory Control samples (LCS 140-33628/13-B) and (MB 140-33628/12-B) were analyzed at a 5-fold dilution due to matrix interferences which prevented the instrumentation from locking. The samples were re-extracted in a different batch.

One or more ion abundance ratios are outside criteria for the Isotope Dilution Analyte (IDA) associated with the following samples: J5-SC1b-30to40-82719 (580-88908-27), J5-SC1b-40to50-82719 (580-88908-28), and J5-SC1b-70to80-82719 (580-88908-31).

The following samples exhibited elevated noise or matrix interferences for one or more analytes causing elevation of the detection limit (EDL): J5-SC1b-30to40-82719 (580-88908-27), J5-SC1b-70to80-82719 (580-88908-31), and J5-SC1b-00to10-82719 (580-88908-35). The reporting limit (RL) for the affected analytes has been raised to be equal to the EDL, and a "G" qualifier applied.

Samples J5-SC1b-20to30-82719 (580-88908-26)[5X], J5-SC1b-60to70-82719 (580-88908-30)[5X] and J5-SC1b-00to10-82719 (580-88908-35)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PCB CONGENERS - WATER

Sample 711-82719 (580-88908-74) was analyzed for PCB Congeners in accordance with 1668A. The samples was prepared on 09/16/2019 and analyzed on 09/24/2019.

The following sample went through Gel-Permeation Cleanup procedure, based on EPA method 3640A: 711-82719 (580-88908-74).

Several analytes were detected in method blank MB 140-33603/10-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

One or more ion abundance ratios are outside criteria for the Isotope Dilution Analyte (IDA) associated with the following samples: (LCS 140-33603/11-A) and (MB 140-33603/10-A).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PERCENT SOLIDS

Samples J5-SC1b-20to30-82719 (580-88908-26), J5-SC1b-30to40-82719 (580-88908-27), J5-SC1b-40to50-82719 (580-88908-28), J5-SC1b-50to60-82719 (580-88908-29), J5-SC1b-60to70-82719 (580-88908-30), J5-SC1b-70to80-82719 (580-88908-31), J5-SC1b-80to90-82719 (580-88908-32), J5-SC1b-90to100-82719 (580-88908-33), J5-SC1b-100to110-82719 (580-88908-34), J5-SC1b-00to10-82719 (580-88908-35) and J5-SC1b-10to20-82719 (580-88908-36) were analyzed for percent solids in accordance with ASTM D2216. The samples were analyzed on 09/11/2019.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifiers

Dioxin

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
C	The compound co-eluted with other compounds
C108	The compound co-eluted with PCB-108
C110	The compound co-eluted with PCB-110
C12	The compound co-eluted with PCB-12
C128	The compound co-eluted with PCB-128
C129	The compound co-eluted with PCB-129
C134	The compound co-eluted with PCB-134
C135	The compound co-eluted with PCB-135
C139	The compound co-eluted with PCB-139
C147	The compound co-eluted with PCB-147
C153	The compound co-eluted with PCB-153
C156	The compound co-eluted with PCB-156
C171	The compound co-eluted with PCB-171
C18	The compound co-eluted with PCB-18
C180	The compound co-eluted with PCB-180
C183	The compound co-eluted with PCB-183
C198	The compound co-eluted with PCB-198
C20	The compound co-eluted with PCB-20
C21	The compound co-eluted with PCB-21
C26	The compound co-eluted with PCB-26
C40	The compound co-eluted with PCB-40
C43	The compound co-eluted with PCB-43
C44	The compound co-eluted with PCB-44
C45	The compound co-eluted with PCB-45
C49	The compound co-eluted with PCB-49
C50	The compound co-eluted with PCB-50
C59	The compound co-eluted with PCB-59
C61	The compound co-eluted with PCB-61
C83	The compound co-eluted with PCB-83
C85	The compound co-eluted with PCB-85
C86	The compound co-eluted with PCB-86
C88	The compound co-eluted with PCB-88
C90	The compound co-eluted with PCB-90
C93	The compound co-eluted with PCB-93
C98	The compound co-eluted with PCB-98
G	The reported quantitation limit has been raised due to an exhibited elevated noise or matrix interference
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Client: Pacific Groundwater Group
Project/Site: Swan Island Lagoon Sediment Investigatio

Job ID: 580-88908-1

Client Sample ID: J5-SC1b-40to50-82719
Date Collected: 08/27/19 16:10
Date Received: 09/03/19 15:00

Lab Sample ID: 580-88908-28
Matrix: Solid
Percent Solids: 54.8

Method: 1668A - Chlorinated Biphenyl Congeners (HRGC/HRMS) - RE (Continued)

Client: Pacific Groundwater Group
Project/Site: Swan Island Lagoon Sediment Investigatio

Job ID: 580-88908-1

Client Sample ID: J5-SC1b-60to70-82719
Date Collected: 08/27/19 16:20
Date Received: 09/03/19 15:00

Lab Sample ID: 580-88908-30
Matrix: Solid
Percent Solids: 56.2

Method: 1668A - Chlorinated Biphenyl Congeners (HRGC/HRMS) (Continued)
