Narrative

CASE NARRATIVE

Client: AECOM

Project: Portland Harbor Pre-Remedial Design

Report Number: 580-77431-3

REVISION 1: JULY 25, 2018

This report was revised to include the Estimated Maximum Possible Concentrations (EMPCs) for PCB 5 and/or PCB 159 where the original values were outside the theoretical ion ratio limits and were not being adjusted to reflect the EMPC values.

This report was revised to correct results which were originally reported using zero area of one of the two masses used for quantitation.

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) resulting from a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are an unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes within the calibration range of the instrument or that reduces the interferences thereby enabling the quantification of target analytes.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

Eighteen samples were received on 5/21/2018 12:00 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 6 coolers at receipt time were 0.8° C, 1.2° C, 3.1° C, 3.2° C, 3.8° C and 4.5° C.

A sample container was provided to be archived frozen at the TestAmerica Sacramento laboratory pending potential additional analyses.

This report contains results of PCB Congeners by Method 1668A, performed by TestAmerica Knoxville.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

POLYCHLORINATED BIPHENYLS CONGENERS (PCBs)

Samples PDI-SG-S195 (580-77431-1), PDI-SG-S159 (580-77431-2), PDI-SG-S162 (580-77431-3), PDI-SG-S163 (580-77431-4), PDI-SG-S160 (580-77431-5), PDI-SG-S142 (580-77431-6), PDI-SG-S150 (580-77431-7), PDI-SG-S210 (580-77431-8), PDI-SG-S217 (580-77431-9), PDI-SG-S212 (580-77431-10), PDI-SG-S209 (580-77431-11), PDI-SG-S207 (580-77431-12), PDI-SG-S206 (580-77431-13), PDI-SG-S205 (580-77431-14), PDI-SG-S202 (580-77431-15), PDI-SG-S197 (580-77431-16), PDI-SG-S197-D (580-77431-17) and PDI-SG-S132 (580-77431-18) were analyzed for polychlorinated biphenyls congeners (PCBs) in accordance with EPA Method 1668A. The samples were prepared on 06/01/2018 and 06/04/2018 and analyzed on 06/13/2018, 06/14/2018 and 06/15/2018.

Several analytes were detected in method blank MB 140-20796/14-B at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

MDL and/or RL, the result has been flagged.

The following sample was observed to have a slight peak shifting due to sample matrix resulting in PCB 144 having the end of the chromatographic peak truncated by the instrument Multiple Ion Detection (MID) switch point: PDI-SG-S202 (580-77431-15). The loss of PCB 144 area is insignificant on the Total PCB congener results. PCB 144 is qualified with a "cn" qualifier in these cases.

One or more Isotope Dilution Analyte (IDA) recoveries are above the method recommended limit for the following samples: PDI-SG-S195 (580-77431-1), PDI-SG-S197 (580-77431-16) and PDI-SG-S197-D (580-77431-17). Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries.

The following samples exhibited elevated noise or matrix interferences for one or more analytes causing elevation of the detection limit (EDL): PDI-SG-S195 (580-77431-1), PDI-SG-S197 (580-77431-16) and PDI-SG-S197-D (580-77431-17). The reporting limit (RL) for the affected analytes has been raised to be equal to the EDL, and a "G" qualifier applied.

An ion abundance ratio is outside criteria for an Internal Standard associated with the following sample: PDI-SG-S195 (580-77431-1).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.
