Narrative

CASE NARRATIVE

Client: AECOM
Project: Portland Harbor Pre-Remedial Design
Report Number: 580-78153-2

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) resulting from a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are an unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes within the calibration range of the instrument or that reduces the interferences thereby enabling the quantification of target analytes.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

Ten samples were received on 06/18/2018; the samples arrived in good condition, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 3.4° C, 5.1° C and 5.3° C.

A sample container was provided to be archive frozen at the TestAmerica Sacramento laboratory pending potential additional analysis.

This report contains results of Dioxins/Furans by Method 1613B, performed by TestAmerica Sacramento.

The following sample was activated by the client for PAH, BEHP and TBT on 7/2/18: PDI-SG-B030-BL1 (580-78153-7). The request for additional analysis was originally requested on job 580-78380 and a frozen container was received. This container was broken in the lab and there was no salvagable sample volume. The client is aware the sample is out of hold for all analysis.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

DIOXIN/ FURAN

Samples PDI-SG-B301-BL1 (580-78153-1), PDI-SG-B297-BL1 (580-78153-2), PDI-SG-B293-BL1 (580-78153-3), PDI-SG-B310-BL1 (580-78153-4), PDI-SG-B309-BL1 (580-78153-5), PDI-SG-B314-BL1 (580-78153-6), PDI-SG-B030-BL1 (580-78153-7), PDI-SG-B031-BL1 (580-78153-8) and PDI-SG-B042-BL1 (580-78153-9) were analyzed for Dioxin/ Furan in accordance with 1613B. The samples were prepared on 06/21/2018, 06/22/2018 and 07/03/2018 and analyzed on 06/27/2018, 06/28/2018, 07/05/2018, 07/06/2018 and 07/10/2018.

Several analytes were detected in method blanks MB 320-230306/1-A, MB 320-230501/1-A and 320-232323/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

EPA Method 1613B specifies a +/- 15 second retention time difference between the recovery standard in the initial calibration (ICAL) and the continuing calibration verification (CCV). The 13C-1,2,3,4-TCDD associated with the following samples run on instrument 4D5 exceeded this criteria: (CCV 320-231207/2), (LCS 320-230306/2-A), (LCSD 320-230306/3-A), (MB 320-230306/1-A) and (WDM 320-231207/1). This retention time shift is due to normal and reasonable column maintenance and does not affect the instrument chromatography resolution, sensitivity, or identification of target analytes. System retention times have been updated for proper analyte identification.

DIOXIN/ FURAN

Sample PDI-RB-VV-20160616 (580-78153-10) was analyzed for Dioxin/ Furan in accordance with 1613B. The samples were prepared on 06/20/2018 and analyzed on 06/27/2018.

The method blank for preparation batch 320-229950 contained 1,2,3,4,6,7,8-HpCDF and OCDD above the reporting limit (RL). Several analytes were also detected above the method detection limit. None of the samples associated with this method blank contained the target compound over the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples were not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.
