CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples designated for Tier IV validation deliverables including summary forms and all of the associated raw data for each of the analyses. When appropriate to the method, method blank results have been reported with each analytical test.

Sample Receipt:

Twenty-nine sediment samples and two water samples were received for analysis at ALS Environmental on 04/25/2018. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4°C upon receipt at the laboratory.

Semivolatiles by GC/MS:

Insufficient sample volume was received to perform a Matrix Spike/Matrix Spike Duplicate (MS/MSD) with the extraction batch containing samples PDI-SG-RB-VV-042318-1730 and PDI-SG-RB-VV-180423-1730. A Laboratory Control Sample/Duplicate Laboratory Control Sample (LCS/DLCS) was analyzed and reported in lieu of the MS/MSD for these samples.

A Laboratory Control Sample/Duplicate Laboratory Control Sample (LCS/DLCS) was initially extracted with the extraction batch containing samples PDI-SG-RB-VV-042318-1730 and PDI-SG-RB-VV-180423-1730. During final volume, the extract designated as the LCS was broken and the entire extract was lost. The extract designated as the DLCS was finished successfully and is reported as the LCS.

Method 8270D, 05/05/2018: The Method Blank KQ1805496-03 contained low levels of Bis(2-ethylhexyl) Phthalate above the Method Reporting Limit (MRL). In accordance with ALS QA/QC policy, all sample results less than twenty times the level found in the Method Blank were flagged as estimated. The samples were not re-extracted and re-analyzed because the sample holding time had expired.

Method 8270D, 05/05/2018: Sample PDI-SG-B279-BL1 required dilution due to the presence of elevated levels of Bis(2-ethylhexyl) Phthalate. The reporting limits are adjusted to reflect the dilution.

The detection limits were elevated for several sediment samples due to less than optimal sample mass extracted for analysis. The samples contained low percent solids which prevented extraction of the sample mass necessary to achieve target detection limits.

Method 8270 SIM-PAH: Insufficient sample volume was received to perform a Matrix Spike/Matrix Spike Duplicate (MS/MSD) with this sample batch. A Laboratory Control Sample/Duplicate Laboratory Control Sample (LCS/DLCS) was analyzed and reported in lieu of the MS/MSD for these samples.

Method 8270D SIM-PAH, 04/30/18: The upper control criterion was exceeded by 2% for Pyrene in Laboratory Control Sample (LCS) KWG1802202-1. The analyte in question was not detected in the associated field samples. The error associated with elevated recovery indicated a high bias. The sample data was not significantly affected. No further corrective action was appropriate.

Method 8270D SIM-PAH, 05/02/2018: The internal standard recovery of Perylene-d12 in samples PDI-SG-B233-BL1 and PDI-SG-B243-BL1 was outside control criteria because of suspected matrix interference. The sample was reanalyzed at a dilution with acceptable results. All analytes associated with the affected internal standard were reported from the diluted analysis. The reporting limits were elevated accordingly. No further corrective action was taken.

A handwritten signature is placed over a horizontal line, likely indicating approval or review.

Date 06/22/2018

Method 8270D SIM-PAH, 06/01/2018 :The duplicate matrix spike recovery of Fluoranthene and Pyrene for sample PDI-SG-B288-BL1 was outside control criteria. Recovery in the Laboratory Control Sample (LCS) was acceptable, which indicated the analytical batch was in control. The matrix spike outlier suggested a potential high bias in this matrix. No further corrective action was appropriate.

Semivoa GC:

Method ALS SOP, 05/30/2018: The matrix spike recovery of Tri-n-butyltin for sample PDI-SG-B288-BL1 was outside control criteria. Recovery in the Laboratory Control Sample (LCS) was acceptable, which indicated the analytical batch was in control. The matrix spike outlier suggested a potential high bias in this matrix. No further corrective action was appropriate.
